THE AMERICAN FLORIST

America is "the Prow of the Vessel; there may be more comfort Amidships, but we are the first to touch Unknown Seas."

Vol. X.

CHICAGO AND NEW YORK, AUGUST 9, 1894.

No. 323

THE AMERICAN FLORIST

Copyright 1894, by American Florist Company.
Entered as Second-Class Mail Matter.

PUBLISHED EVERY THURSDAY BY
THE AMERICAN FLORIST COMPANY,
322 Dearborn Street, Chicago.

Subscription, \$1.00 a year. To Europe, \$2.00.

Address all communications to

AMERICAN FLORIST COMPANY,
P. O. Drawer 164, CHICAGO.

Eastern Office: 67 Bromfield St., Boston.

This paper is a member of the Associated Trade Press and the Chicago Trade Press Association.

The Tenth Annual Meeting

OF THE

Society of American Florists

WILL BE HELD AT

ATLANTIC CITY, N. J.,

AUGUST 21, 22, 23 & 24, 1894.

Members may remit the annual dues (\$3.00) to the secretary prior to the meeting, thus avoiding the crowd and relieving the officers on the opening day. Badge for 1894 will be sent by mail to those who remit in advance of the meeting.

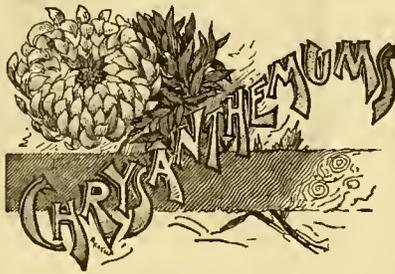

Intending members can obtain any information wanted by addressing the secretary.

OFFICERS:

J. T. ANTHONY, Chicago, president; ROBERT KIFT, Philadelphia, vice-president; W. M. J. STEWART, 67 Bromfield St., Boston, Mass., secretary.

Notes.

The grasshoppers are beginning to find their way into the houses, and will need looking after; they are great feeders and will eat the end out of a strong shoot very quickly. Hand picking is the best remedy that we know, but care must be taken in catching them or the shoots, which are now very soft and brittle, will be broken off. Take a trip through the houses occasionally after dark and see if there are any millers flying around. The catching of one of these insects when it makes its first appearance means the killing of hundreds, if not more, of grubs or worms that will make a fine late dinner or breakfast of some succulent stem or bud later on.

In our notes last week on requiring individual blooms to be shown on 12 inches of stem we said that some other way might be found to improve the general appearance of our exhibitions. This requirement, if we are not mistaken, was first introduced in New York in the schedule of 1891, and was the outcome of the death of the board system the previous year. It was then established, as we have been informed, for two reasons: first, to place all exhibitors on an equality and not let arrangement influence the opinion of the judges, and second, to show the flowers so that their bad as well as good qualities could be easily distinguished; that is, if they had a "weak neck" or a long flower stalk to let the growers find it out. Now, this is all right as far as it goes, but it narrows the exhibition down to a few varieties (that are over and over repeated in the different stands) which have strong, stiff stems, or to strictly commercial flowers, and consequently discards many varieties that are very valuable in a large display. For instance, Kioto is one of the best exhibition varieties that we have to-day, of beautiful color and form, and possessing that peculiar waxy lustre of its petal found in no other, but it has been discarded because it has a "weak neck" and a long flower stalk. The incurved varieties, where are they? They are nearly all weak necked, and if shown at all are relegated to some side table in order to make room for their larger and showier sisters.

Now, the showing of blooms on long stems is wrong, except in seedlings, when

the weak points of the bloom, if it has any, should be shown up, and in large vases of six or more of a variety. In the first place we do not believe our shows are intended for the exhibition of commercial varieties only, but to bring out all the classes and varieties possible. In the next place the growers are not the only ones to be considered, for it is the public that furnishes the funds that keep the shows going, and they little care whether a variety would be profitable or not to a grower, but are much more interested in the various forms and colors, and often visit the shows with the idea that they will see many varieties not placed on sale at the stores. If we keep on in the line in which we are now moving we may before long lose their patronage. At one of the large shows last year we overheard a lady remark to her companion as she went away that she had seen just as good flowers in the florists' windows on the street, and that they were much better arranged. It is hardly necessary to say that if that idea becomes general we shall have to hustle to keep our heads above water at our shows.

One of the remedies seems to us to be a better arrangement of our blooms, and in order to procure this it does not seem to be advisable to hamper the exhibitor, but let him show his flower as he may like, and thereby bring out many ideas; possibly we shall strike an arrangement that will be just what we want, and no fear but that the others will immediately adopt it. It might also be advisable to offer a premium for the best arranged exhibit at the show, not containing less than eighteen blooms, or any other number that may be deemed advisable. This prize to be offered not for a special exhibit, but to include all exhibits shown for other prizes.

The best way that we have ever seen to stage chrysanthemum blooms is to show each flower in a bottle by itself. Before placing the blooms set into each bottle a spray of handsome chrysanthemum foliage and replace it during the show if it wilts. Cut the stems of the front row so that the flowers will just stand clear of the bottle. Make the second just tall enough so that in looking level across the table one half of the flower will show, and instead of placing them in straight lines set them between the blooms of the first row, leaving room enough between the blooms that they do not touch. Continue on in this way to the back row, but do not have more than four rows if it can be helped. An exhibit, if arranged in this manner, with as much care as possible being taken in the arrangement of colors, will amply repay for the time and attention given, will improve the general effect wonderfully, and will attract the eyes of every visitor to the show.

ELIJAH A. WOOD.

West Newton, Mass.

WILKESBARRE, PA.—William M. Eldridge died from heart disease Monday night, August 6.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

In looking ahead for next winter it may not be amiss to give a thought or two to the rooted cutting business. It is no uncommon thing to hear a grower say the only way to make money out of carnations is to sell from both ends, i. e., to sell the flowers and cuttings from the same plant. Possibly there may be few more dollars at the end of the season by following out this method, but I doubt it very much, for you can not grow as many or as good flowers on plants that are to be used for propagating (without injuring the health of the cuttings to some extent) as you can on plants that are handled for cut flowers only. This may seem like a contradictory statement, that you can not grow as good flowers on plants that are kept in good healthy condition for cuttings as you can on those grown exclusively for flowers, but it is a proven fact. To get the very best out of your plants in a cut flower way you must not be hampered by looking out for a lot of good cuttings from the same plants.

If I mistake not, the late Mr. Hunt in his book "How to grow cut flowers" brings out the point very strongly that to get rid of some of the diseases carnations seem heir to we will have to grow our stock plants in a more normal temperature than that of the forcing house, and if we want to keep up the health of our stock that is without a question the only way. To start into the selling of cuttings you should either grow separate stock for taking the cuttings from or make flowers from your plants a secondary matter. In this way you might get enough flowers to pay your coal bills, and possibly a bit more, which would help to bring the balance up on the credit side at the end of the season. In this as in everything else quality is what you will want to aim for, and unless you can send out good stock that will make good healthy plants if properly handled better send out none at all.

The standard of quality for a rooted cutting to be satisfactory to the trade now is much higher than it was even three years ago. Competition has lessened the price considerably and there is not a fortune in this business for any one man. Of course in this as in everything else those who send out extra good cuttings and deal squarely and honorably all the way through will get and hold a good paying trade, but if the ratio of increase in number of those who grow cuttings to sell is as great in the next five years as it has been in the past five it will be harder and harder to get a good trade. If a grower can get good stock within a hundred miles of his home he is not likely to send a thousand mile, for it, and from the present outlook this trade will become more localized every year.

There is considerable expense connected with the cutting business that is some-

HOUSE OF MRS. FISHER CARNATIONS [PHOTOGRAPHED FEB 1, 1894]

times overlooked by those who contemplate going into it. In the first place there are on a moderate estimate 3,500 growers you will want to reach with your announcement. The best way without question is through the floricultural papers. That will cost you a little money; not so much, but still it is quite an item at the end of the year. The greatest expense comes in with the preparation and mailing of your price list, and taking everything together you will be very fortunate if you make sales enough to bring the cost of making them down to thirty per cent of the net receipts.

If a grower with two or three greenhouses come to me for advice as to whether he can make more out of them by selling cuttings my reply always is "don't you believe it, stick to your flowers and be happy." The grower who has a good sized plant so that he can, devote a part of it to cuttings and a part to flowers, can by persistent advertising and constant attention to business get up a trade on cuttings that will pay fairly well in the course of a few years, but to start in with a small place where you have say not over a thousand plants of any one variety it is only a vexation and a worry. If you get an order for say 2,500 of a certain variety you will have to injure your plants by taking too many cuttings off them to fill this order and smaller ones you may have, or else fill the order piecemeal or send it back, either of which is alike annoying both to yourself and the purchaser. I have been through this mill and know what I am talking about; not that I want to discourage any one in the business, but it is worth thinking about seriously before you attempt to grow cuttings for sale and make money from both ends.

ALBERT M. HERR.

House of Mrs. Fisher Carnations.

Referring to the discussion on the merits of Mrs. Fisher carnation Mr. Chas. Pommert of Greenfield, O., sends us the photo from which the accompanying engraving is made. The photo was taken February 1 last, and Mr. Pommert writes that the house had been in full bloom since September 1, 1893. The picture certainly speaks for itself and shows that the variety does well with Mr. P., whatever faults it may have developed elsewhere.

Mrs. Fisher Carnation Again.

Seeing so little in the FLORIST about the "Mrs. Fisher" carnation, I send you a photo of a house of that variety, which was taken on the 26th of June. They have been in bloom continuously since last October and with the exception of a short time in May have yielded immensely. The house is 156 feet long, 24 feet wide, three-quarter span with solid bed on south side and two benches, one higher than the other, so that the picture shows only a part of the two benches. The flowers do not show very much in the picture, but I am cutting from 1,200 to 1,800 every day now, and shall continue to do so until the house has to be made ready for next season's crop.

Soil used by us is a light sandy loam from old pasture sod worked up with stable manure, and ashes and fertilizer applied before setting the plants.

With us in this section, the "Mrs. Fisher" is the best and most profitable white carnation we can grow.

JEROME BUTTERFIELD,
Florist for Coolidge Bros.

So. Sudbury, Mass.

Eats the Flower Buds.

An insect that is new to me has caused considerable damage this summer to my carnations and roses. In appearance and actions it very much resembles the common thrips, but is nearly white in color. It does its work in the flower buds entirely, crawling into them as soon as the calyx begins to open, and feeds on the petals before they are exposed enough to show color, as well as after. The result is the outside petals have a rusty appearance, as though they had been bruised, and sometimes are injured so as to dwarf their growth, thus injuring the development of the buds. Have any readers of the FLORIST been troubled with the same, and if so what remedy has proved effective?

INQUIRER.

DO YOU WANT Mr. Scott's seasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$3.00.

HOUSE OF MRS. FISHER CARNATION AT SOUTH SUDBURY, MASS.

The Ginkgo Tree.

The ginkgo or maidenhair tree, *Ginkgo biloba*, formerly called *Salisburia adiantifolia*, is a monotypic genus, the species being a fine deciduous tree from China and Japan, belonging to the yew sub-order of coniferae, though no tree can appear less like a member of the pine family than the ginkgo. It is a fairly rapid grower, with a straight trunk clothed with a light gray bark; its leaves are alternate, fan-shaped or wedge-shaped with a broad apex notched or cut more or less deeply, frequently two lobed, thick and leathery, with fine longitudinal ribs, and of a light yellowish green color. The leaves are so like those of some maidenhair ferns (only much larger of course) that it is sometimes called the maidenhair tree. It thrives thoroughly well in almost any garden soil. Louden recommends propagation by cuttings or layers, but we find it comes more readily from seed, as about 90% of good fresh seed will germinate and make finer specimens than from either cuttings or layers. There is but one difficulty in securing the seed, that is the staminate and pistillate flowers are borne upon separate trees. The former are in slender catkins about 1½ inches long, while the female flowers are either solitary or in small clusters at the end of the branches. The female flower, which consist only of a naked ovule, is seated in a small cup-like disk, this increases in size and covers the base of the ripe fruit, which is a globular or ovate nut.

In its native countries the ginkgo attains a large size; Bunge mentions one 40 feet in circumference, and still vigorous. There is a specimen in the Botanic Garden at Pisa 80 feet high. It is supposed that it was introduced into Europe from Japan by the Dutch. It has been up to a recent date a rare tree, though it is recorded as having been first planted in this country in 1784 by Mr. Alexander Hamilton, who

lived at Woodlands, near Philadelphia; the trees are still standing, though the grounds have been converted into a rural cemetery, being 60 feet high, 3½ in circumference. There are some fine specimens in Boston Common, one of which was moved to its present site from a private garden in 1832. It is said that this tree was a well grown specimen in 1798, so it has attained a very respectable antiquity.

This tree until recently has been but little cultivated. It will stand severe pruning, and can even be kept as a large bush if desired, though the subject of pruning street trees is one upon which there is diversity of opinions, our own Parking Commission being divided upon it. I think this tree preferable to several of the varieties now planted on our streets. It is excellent for narrow streets, owing to its upright habit, and possesses all other features which strongly recommend it as a city tree; it is always clean and is never infested with insects. The only objection any one could have to it is that the odor from the fruit when bruised is very disagreeable. Two small streets are now planted with this beautiful tree; they are handsome specimens. There is a row of them on either side of the drive from B street to the Department of Agriculture, doing very nicely. There is a very old specimen on Analostan Island, near the old Naval Observatory, which was here in the days of General Mason, who owned that island, and whose gardener was the author of one of the earliest American books on gardening.

The wood is of a yellowish color without any resinous qualities, and useful as lumber, though the Chinese cultivate the tree mainly for its nuts, which are edible but insipid. Medicinal virtues are attributed to them, and they are considered essential, roasted or boiled, at entertainments.

REYNOLDS.

Judges and Exhibitions.

Some weeks ago I read with very great interest the able remarks made by Messrs. Stewart, Ewing and Watson upon the one and three judge systems, also the sound and well worded criticism added by the editor of the *FLORIST* upon these opinions. I was sorry the subject was not ventilated still further, as I think exhibitions and judging one of the most important subjects, and of vital interest to all in the trade.

America is not alone in its three judge system, as it is the invariable rule for the committee at English exhibitions to appoint three judges, men of thorough practical ability, from different localities. However, it is of no use appointing either one or three judges if the schedule is not well gotten up and the details of the exhibition properly carried out. The majority of the disappointments in this line are caused by the want of practical ability and good management, resulting in disappointment to the public and financial failure.

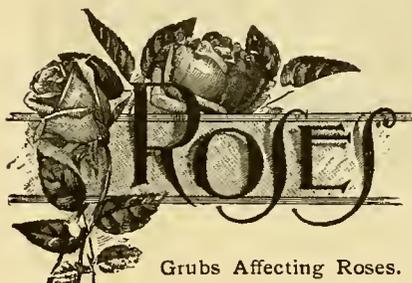

Our summer exhibition in San Francisco last year was a case in point. A committee of ladies undertook to manage the business details; they were prominent and energetic, but want of practical ability stranded their best intentions. Each exhibitor was allowed to stage his entire exhibit together, irrespective of classes; hence the judges, three in number, had to hunt all over the hall to find the competing exhibits. This show was very unsuccessful.

To insure a successful show a public meeting should be called at least two months before the date set for it; discussion should be general, and a practical committee should be chosen to compile schedule and rules and to settle every detail. The prizes need not be large, just enough to insure competition, but there should be a handsome certificate or medal

with each prize, this being worth more than the money. Each exhibit should be properly classified and staged by a certain hour on the opening day. Everyone should leave the hall while the judging is in progress, the judges being accompanied by some one whose duty it is to fill in the certificates and place them where they belong as soon as the exhibits are judged, the exhibition not to be open to the public until the judging is over.

I think it necessary that three practical men be appointed, two to do the judging, the third to be the referee if these two do not agree. The best music should be engaged and the show well advertised, members of the press receiving proper attention. The schedule should be carried out fully and impartially, without favor or preference, and if harmony and business principles go hand in hand there is no reason why the exhibition should not be a thorough success.

San Francisco, G. M. STRATTON.

Grubs Affecting Roses.

ED. AM. FLORIST:—Noticing several articles lately regarding grubs on roses, and thinking perhaps the way our foreman, Mr. Rosengreen, prepared for them might be of some benefit to others will state the facts.

June 30th we completed a new house 135x18 and put in the soil all but a part of a side bench, which we were unable to do on account of early quitting time on Saturdays of the day hands. Two strings of 1½-inch steam pipe were connected up and steam started. As soon as work on dirt ceased the ventilators were closed down and steam turned on. For twenty-four hours the temperature was kept at 100° for the night time and 150° to 170° during the day. On Monday the balance of the soil was put in and glass shaded. During the next two or three days the house was planted.

Up to the present time (August 2), of 1,100 roses planted in the soil that was baked we have not lost a plant, but of 200 planted in the soil put in afterwards have taken out 20 plants and on the roots of every one have found a large juicy white grub. In another house of the same size since completed and treated in the same way except that all the soil was baked we have not lost a single plant.

In all the soil so treated have not been able to find any animal life. Some angle worms were found all shriveled up and could be broken like a piece of stick. Probably if balance of steam pipes had been connected and the temperature run above 200° it might have destroyed some of the seed in the soil. It surely is an inexpensive way to get rid of the grub, and I trust some others may try it and report as to their success. I. SHELBY CRALL.

DO YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1894. Price \$2.00.

Hardy Flowers for September.

This month brings us to the last of the flowering trees, a variety of *Aralia chinensis*. *Gordonia pubescens*, and *Lagerstroemia indica* also assume the tree form, but not in this latitude. Neither are they reliably hardy north of Washington, although both have stood for a series of years in southern New Jersey.

The flowering shrubs are but a small company of "hangers on," which give distinct impressions of the waning powers of our northern climate. September is a transition month, and many of the trees and shrubs are already in a state of fruitage. In this stage the chief beauty of very many of them consists, and a collection could be most usefully planted for autumn effects.

The herbaceous plants are among the most brilliant of the year, and I trust the florists of the country will make a feature of them, especially in such small towns as demand a general rather than a strictly greenhouse trade. I again urge anyone to plant large masses of a few well selected plants which flower simultaneously, rather than little insignificant bits which flower promiscuously. There are methods of alternating the plants which flower in the various months, but none of them are to be compared for effectiveness with a seasonal display.

TREES AND SHRUBS.

Aralia chinensis varieties.
Abelia rupestris (S).
Baccharis halimifolia.
Clethra tomentosa.
Caryopteris mastacanthus.
Clerodendron fragrans, fl. pl. (S.)
Daphne Cneorum.
Gordonia pubescens (S.)
Hamamelis virginica.
Hypericum patulum.
Hydrangea paniculata.
Lagerstroemia indica (S.)
Polygonum sachalinense.
Potentilla fruticosa.
Passiflora incarnata (cl.)
Pueraria Thunbergiana (cl.)
Rose Gloire de Dijon, *Dinsmore*, *La France*, etc.
Spiraea bullata.

Desmodium penduliflorum is noted as continuing to flower during this month, and *Corchorus japonicus*, *Rhodotypos kerrioides*, and *Foresteria ligustrina* as giving flowers as late as September at the north. *Lycium chinense* always flowers during September, and I do not remember to have seen it in fruit at this point.

HERBACEOUS PLANTS.

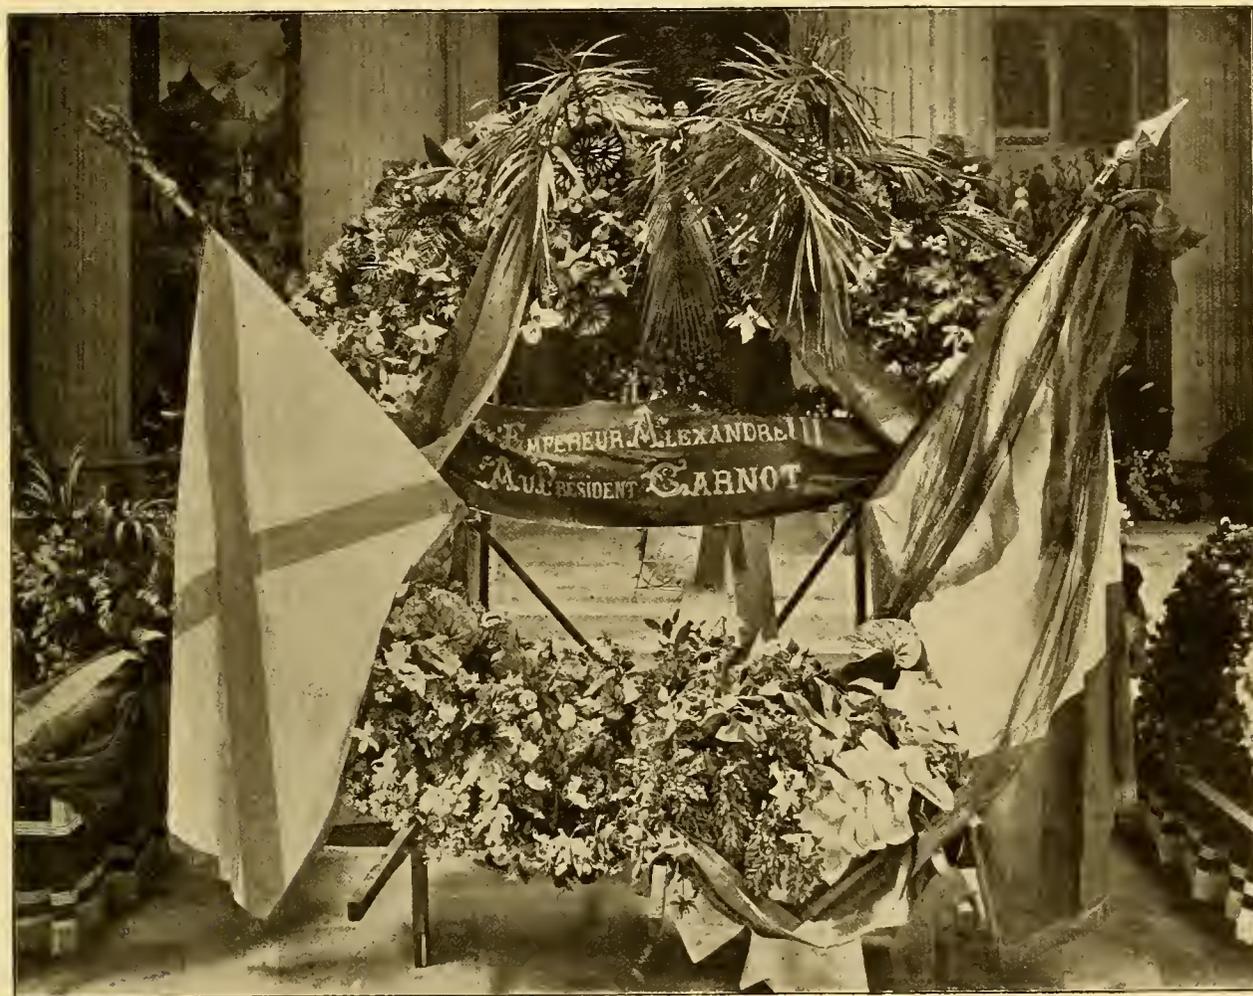

Achillea ptarmica, fl. pl.
Aster Bessarabicus, *A. grandiflorus*, *A. Novæ Angliæ* varieties, *A. Townshendii*, *A. Lady Trevellian*, etc.
Aconitum autumnale, *A. uncinatum*.
Allium mutabile, *A. stellatum*.
Amsonia salicifolia.
Anemone japonica varieties.
Anthemis tinctoria.
Astilbe japonica autumnalis.
Actea alba.
Begonia Evansiana (S.)
Boltonia latisquamæ, *B. glastifolia*.
Crinum Powellii (S.)
Centauria calocephala.
Centranthus ruber.
Colchicum autumnale, *C. speciosum*.
Crocus sativus, *C. speciosus*, *C. nudiflorus*.
Chrysanthemum sinense, pompons, Old Yellow, *Timbale d'Argent* and others.
Chrysopsis Mariana.
Chelone Lvonii, *C. obliqua*.
Clematis tubulosa, etc.
Ceratostigma Larpentæ.

Cooperia Drummondii.
Cunila Mariana.
Campanula carpathica.
Delphinium belladonna, *D. sinense* varieties.
*Eulalia*s and other grasses.
Eupatorium ageratoides, *E. altissima*, *E. Frazerii*, *E. cœlesterium*.
Euphorbia corollata.
Echinacea purpurea.
Funkia subcordata.
Geranium Wallichianum.
Gypsophila repens.
Gentiana angustifolia, *G. alba*, etc.
Helianthus angustifolius, *H. multiflorus*, *H. lætiflorus*, *H. orgyalis*, *H. Maximilanus*, *H. Miss Mellish*, etc.
Helenium autumnale.
Hibiscus moschutos, *H. militaris*.
Kniphofia corallina, etc.
Lobelia cardinalis, *L. syphilitica*, *L. s. alba*.
Liatris elegans, *L. graminifolia*.
Linum perenne.
Lotus corniculatus.
Papaver nudicaule.
Pyrethrum uliginosum.
Phlox decussata varieties.
Phygelius capensis.
Polygonum vacciniifolium.
Potentilla pyrenaica, *P. erecta*.
Prosartes Hookerii.
Oenothera missouriensis.
Rhexia virginica.
Ruellea cœleosa.
Rudbeckias.
Salvia azurea, *S. Greggii*, *S. prunelloides*, *S. Pitcherii*, etc.
Sedum latifolia, *S. Sieboldii*, *S. spectabile*.
Silphium asperrimum, *S. laciniatum*, *S. terebinthenaceum*, etc.
Silene Schaffta.
Statiche latifolia.
Solidago rigida, *S. Drummondii*, etc.
Spiranthes cœrua.
Sternbergia lutea.
Veronica longifolia, *V. subsessilis*.
Viola cornuta varieties.

Some of these plants continue to flower all through October in the milder parts of the country; in some seasons indeed the asters, crocus, colchicums, chrysanthemums, kniphofias, *Anemone japonica*, *Sternbergia lutea* and *ceratostigma* (plumbago) have been noted as late as November. But from October through the fall to Christmas there is a quantity of trees and shrubs, both native and exotic, which are so remarkable for the beauty of their foliage and berries, that they are well worth the attention of the florists, upon whom in future no doubt very much of the garden grouping of the country will devolve. Possibly you may find room to name a few of such.

FOLIAGE AND BERRY BEARING PLANTS FOR AUTUMN.

Acer cissifolium, *A. japonicum*, *A. Nikkense*, *A. rubrum*, *A. saccharum*, *A. tartaricum*, *A. Ginnala*.
Aralia spinosa.
Andromeda (oxydendron) arborea.
Ampelopsis virginica, *A. Vietchii*, *A. heterophylla*.
Arctostaphylos uva-ursa.
Actinidia polygama.
Akebia quinata.
Baccharis halimifolia fœm.
Berberis Thunbergii, *B. Sieboldii*, *B. chinensis*, *B. amurensis*, *B. Hokodata*, *B. vulgaris*, *B. aquifolia*.
Callicarpa purpurea.
Cornus florida, *C. paniculata*, *C. Mas* varieties, *C. sericea*, *C. Spathii*, *C. pubescens*, *C. sanguinea*, *C. stolonifera aurea*.
Cotoneaster vulgaris, *C. laxiflora*.
Cocculus carolinianus.

WREATH SENT BY THE EMPEROR OF RUSSIA
FLOWERS AT THE FUNERAL OF THE LATE PRESIDENT OF FRANCE.

Chionanthus virginicus.
Cydonia japonica.
Celastrus scandens.
Crataegus coccinea, *C. cordata*, *C. oxyacantha*, etc.
Colutea species.
Elæagnus species.
Euonymus europæus varieties, *E. atropurpureus*, *E. japonicus-roseus*, etc.
Hedera chrysocarpa. (S.)
Ilex opaca, *I. Sieboldii*, *I. glabra*, *I. lævigata-lutea*, *I. verticillata*.
 The European holly in some of its varieties stands well in S. Virginia, and some day perhaps a florist in that state will find leisure to produce hybrids between them and *Ilex opaca*.
Lindera Benzoin.
Liquidamber styraciflua.
Lonicera sempervirens.
Lycium barbarum, etc.
Lycasteria formosa.
Magnolia glauca, *M. hypoleuca*, etc.
Menispermum canadense.
Mitchella repens.
Nemopanthes canadense.
Nyssa aquatica, etc.
Pyrus arbutifolia, *P. prunifolia aurea*, *P. melanocarpa*, *P. nigra*, etc.
Philodendron japonicum.
Parrotia persica.
Rhamnus frangula, *R. carolinianus*.
Rosa rugosa, *R. rubiginosa*, *R. grandiflora*, *R. spinosissima picta*, *R. acicularis*, *R. cinnamomea*, *R. villosa*.
Rhus species.
Symphoricarpus vulgaris.

Symplocos cratægifolia.
Sambucus racemosus.
Solanum Dulcamara.
Smilax rotundifolia.
Viburnum dentatum, *V. dilatatum*, *V. lantana*, *V. lentago*, *V. acerifolium*.
Salix vitellina and its varieties, *Bultzensis*, *rubra purpurea*, etc. are well worth planting for winter. Let anyone once begin these special effects in their gardens, and they will always try to find material to enhance the beauty and value of their collections, and be sure to have imitators and admirers. The gardener and florist with a versatility of taste, and a general trade, will recognize such plants, (shrubs or trees) as his stock in trade, and appreciate the fact that the people delight in variety rather than monotony. He will know how largely upon him depends the future of the American "Rus in Urbe." He will study them one by one, and group them on his ground sometimes, even in a limited way, and as he does this artistically and harmoniously so will he create a demand for his stock and advertise it. JAMES MACPIERSON.

A Serious Blight of the Garden Pinks or Sweet Williams.

A recent visit to a florist establishment brought to mind again the appearance of an old enemy, namely, the leaf blight of the pink or sweet william. This blight is quite characteristic in producing upon the foliage large, well defined, somewhat

circular patches of an ashy brown color, which soon become dotted over with minute blackish specks, all of which is evident to the naked eye. These patches may be many in number, and as they grow become confluent, thus involving the whole leaf. In many cases the border of the speck takes on a purplish color, making the disease all the more conspicuous. As the leaves become thoroughly blighted they hang down upon the stem, but as the petiole clasps the stem the leaves readily fall away, thus giving the blighted plants a very unsightly appearance.

The fungus (*Septoria Dianthi*, Desm.) is not confined to the leaves, but produces similar patches upon the stem of the plant, and in that way increases the amount of its destructive work.

As this blight comes to its full estate about the time that the plants are through blooming it would seem as if it was not of any great account, but it must be borne in mind that this fungus is the same that is upon the carnation, another species of the genus *Dianthus*, and the spores which are produced in vast quantities upon the garden pinks may be the means of spreading the leaf blight to the carnations, which are usually grown in the same establishments with the pinks, so that it is necessary in order to keep one kind of ornamental plant free from disease to sometimes use measures for checking the same fungous growth upon some other plant which in itself does not

suff-r severely. It is interesting to note in this connection that the border of the spot varies greatly in the deepness of color; upon plants with pale bloom there is little or no reddening of the border, but upon those plants with purple, scarlet or deep pink bloom there is a corresponding presence of the same color in the spot border. The same is true of the spots upon the stems; this difference in the color of the border of the spot is common to the carnation, and these likewise indicate the color of the bloom.

BYRON D. HALSTED.

Convention Program.

COMMITTEE ON NOMENCLATURE.

The Committee on Nomenclature will meet at the Committee Room, Morris Guards' Armory on Monday evening, August 20. Members having matters which they wish to have brought before this committee should send them at once to the chairman, Mr. John N. May, Summit, N. J.

The Executive Committee of the Society will also be in session on Monday evening at the same place.

TUESDAY, AUGUST 21, 1894.

First Day, Opening Session, 9 to 11:30 o'clock, A. M.

Address of welcome, by the Mayor of Atlantic City.

Response.

President Anthony's address.

Reports—Secretary and Treasurer, Standing Committees, Special Committees.

Miscellaneous business.

Discussion of president's address.

AMENDMENT TO THE CONSTITUTION.

The following amendment to the Constitution is offered by Mr. H. B. Beatty:

Insert in last clause of Article V the words "any special or," so that it shall read: "Vacancies in the Executive Committee at any special or annual meeting, or in the list of Vice-Presidents at the annual meeting may be filled temporarily by the President during or previous to the first day of the meeting and until such regular officers can act"

PAYMENT OF DUES.

Members can pay their annual dues at the Convention Hall previous to the opening of the morning session, or at the close of that session, on the first day of the Convention.

Those who choose to do so may remit the amount of their dues to the Secretary at any time previous to the date of the Convention. The Society's badge and receipt will be sent in return.

N. B.—According to the By-Laws and custom of the Society, any person becoming a member continues a member until he asks for a release, or is suspended for non-payment of dues. Members having once joined the Society are thus liable for successive annual dues unless they notify the Secretary of their desire to withdraw from membership. All arrearages must be paid.

Any member desiring the suspension of this rule in his behalf should make application to the Executive Committee, who may make such abatement as they deem justifiable.

First Day, Afternoon Session, 2:30 to 5:30 o'clock.

Essay, "Some requirements for the elevation of our business," W. H. Taplin, Holmesburg, Pa.

Discussion.

Essay, "Comparative colors in relation to flowers," (Illustrated), F. Schuyler Mathews, Boston, Mass.

Discussion.

The question box.

WEDNESDAY, AUGUST 22, 1894.

Second Day, Morning Session, 9 to 11:30 o'clock.

Selection of place of meeting for 1895. Nomination of officers.

Essay, "The best methods of growing roses, and best varieties for present demands," John H. Taylor, Bayside, N. Y. Discussion.

Essay, "Orchids as commercial flowers," Wm. Mathews, Utica, N. Y.

Discussion.

Essay, "Cannas," John T. Temple, Davenport, Ia.

Discussion.

Election of State Vice-Presidents by state delegations.

Second Day, Afternoon Session, 2:30 to 5:30 o'clock..

Essay, "The evolution of the chrysanthemum," (under the auspices of the Chrysanthemum Society of America), Grove P. Rawson, Elmira, N. Y.

Discussion.

Essay, "Successful violet culture," Andrew Washburn, Bloomington, Ill.

Discussion.

Essay, "Aquatics," Wm. Tricker, Clifton, N. J.

Discussion.

The question box.

The Chrysanthemum Society of America will hold its annual meeting at the close of the afternoon session.

THURSDAY, AUGUST 23, 1894.

Third Day, Morning Session, 9 to 11:30 o'clock.

Election of officers.

Essay, "The classification and inspection of commercial plants," G. L. Grant, Chicago, Ill.

Discussion.

Essay, "Fertilizers and their application," Robert Simpson, Cromwell, Conn.

Discussion.

The question box.

Third Day, Afternoon Session, 2:30 to 5:30 o'clock.

Essay, "The value and importance of statistics, foreign and domestic," Benj. Durfee, Washington, D. C.

Discussion.

The balance of this session will be devoted to miscellaneous business, the first in order being the report of the committee appointed at the St. Louis meeting to consider the matter of fire insurance for greenhouses, of which Mr. E. H. Michel, of St. Louis, is chairman.

The annual meeting of the Florists' Hail Association will be held at the close of this session.

TRANSPORTATION.

The Trunk Line Passenger Association, which represents all the railroads entering New York and Philadelphia, has, in response to the customary application for reduced fares in favor of members of the Society of American Florists attending the Convention at Atlantic City, decided that it will be impracticable to apply the usual reduction on the certificate plan, owing to the low summer excursion rates in operation at Atlantic City. It therefore becomes necessary for those members intending to go to the Convention to make early arrangements with the lines over which they shall travel, endeavoring to travel in as large companies as possible, as in this way the most favorable rates will be secured. Delegates from districts represented by a few only should communicate with those having charge of the transportation from the most convenient large city or railroad center, and thus get the benefit of such low rates as may be secured from such points.

RECEPTION.

The chairmen of the various delegations en route to Atlantic City are requested to notify the chairman of the Reception Committee of the time of arrival of their trains, and members of that committee will be on hand to escort them to their hotels.

THE TRADE EXHIBIT.

The trade exhibition will be as heretofore a prominent feature. Every branch will be well represented. Very little room is left, and those desiring space who have not already secured it, should apply immediately to the superintendent of the exhibition, who will supply all information relative to arrangements, premiums, etc.

THE BOWLING CONTEST.

This will take place on the evenings of Wednesday and Thursday. Intending competitors in the club contest or in the individual competition

should communicate at once with the committee in charge of this feature.

ENTERTAINMENTS

On the fourth day, Friday August 24th, the members of the Society of American Florists will be the guests of the Florists' Club of Philadelphia. Full particulars of the programme for this day, also special arrangement for entertainment of the visiting ladies will be given at the opening session of the Convention.

AUXILIARY SOCIETIES.

The annual meeting of the American Rose Society will be held on Tuesday evening, August 21, the Florists' Protective Association on Wednesday evening, August 22 and the Telegraph Delivery Association on Thursday evening, August 23.

Come to the Convention

BY THE BARD OF KINGSESSING.

Come to the convention by the seaside,
And take a plunge into its restless tide;
Come from your tows on the hot western plain,
And rest for a time by the cool surging main.

Come! seekers of wisdom and store your mind
With knowledge of the most superior kind,
That will flow from our greatest leading men,
As they voice their works of the silent pen.

Come! Ye bowlers, from all over the land,
And in this the great test take a hand;
A cup for each contest will be the stake,
But he that wins must bowl a natural break.

Come! Our master has sounded the call,
To give instruction to we scholars all;
An answer to this question he will give—
Is it the eelworm or grower that shall live?

Come! hunters of pleasure, there's much in store;
A sail on the ocean not far from shore,
There is the merry-go-round, safe to ride,
But more pleasing is the toboggan slide.

Come to the convention by the seaside,
Lasses will be there in need of a guide,
Though many of them forty summers have seen,
They will all label themselves "only sixteen."

Lantanas in Bloom.

The lantanas certainly possess more merit than is generally afforded them; they have at least one strong point in their favor, viz., their long period of flowering. When grown as standards they are very attractive. I saw some standards the other day that were wintered in a structure that was kept at an intermediate temperature, and they are now (outside) completely studded with their clusters of bright colored flowers. Though so attractive on the plant the strong smell that pervades the whole of them, especially when bruised, is against their being employed in a cut state, at all events where they will be closely inspected. One point especially noteworthy, with regard to the blooms of lantanas, is the great change of color which takes place after they have been open for a day or two; some will on opening be bright yellow, which changes to deep pink. As one cluster will contain flowers in all stages of development the gradation in color is thus rendered the more pronounced.

Lantanas are of the easiest possible culture, and strike root easily from soft wood cuttings. Let them run up to the height required, but the lateral shoots must be kept pinched out until it is attained, and then leave five or six growths at the top, which will require careful watching as regards pinching until fine heads are attained. These standards may be kept for years, and will form handsome specimens for the lawn. Red spider is very apt to attack them, but frequent syringing will keep them in check. As regards varieties they are numerous; La Neige, white; Distinction, bright orange red; Magenta, purplish magenta; Pluie d'Or, fine light yellow, are all good.

A. J. E.

THE AMERICAN FLORIST and *Gardening* together to one address for \$1.75. Send orders to the American Florist Co.

THE CATAFALQUE IN THE PANTHEON.
FLOWERS AT THE FUNERAL OF THE LATE PRESIDENT OF FRANCE.

Chicago.

Old Pluvius seems to hold a special spite against the good citizens of this town. All around us the hearts of our fellow men have been gladdened by copious showers, but not a drop for Chicago. Or may be the rain god has taken offense at the persistency with which the weather clerk has predicted rain for this locality, and which evidently wasn't on the program. Meanwhile the drought continues and outdoor vegetation is suffering badly. The want of moisture at the roots is bad enough, but the effects of red spider is in many localities still worse and threaten to ruin violets and carnations unless relief comes speedily. The watering of outdoor stock in dry seasons is regarded as of rather doubtful benefit to the plants by many growers, but be that as it may there is no doubt that red spider will be kept in check by springing, which is evidenced by the condition of the fields where the sprinkler is used freely.

Market conditions are much the same as last week. There are quantities of good auratum and gladiolus coming in, which are in small demand however.

At a meeting of the Florists' Club held last Thursday Mr. A. G. Prince was elected financial secretary. A communication from the Philadelphia Florists' Club extending an invitation to participate in a prize shooting match to be held

at Atlantic City at convention time was read and accepted by the club.

Mr. Anton Then is adding two new greenhouses to his establishment near Bowmanville. Mr. Then is going into chrysanthemums quite extensively this year. A number of plants are being grown for the coming exhibition which are looking fine. Several benches containing about 5,500 plants grown to single stem look remarkably thrifty and promise first class blooms. Mr. T. also has a small pond on his grounds in which he is experimenting with some hardy varieties of nymphæas. The plants are doing nicely and next year the pond will be filled with the best varieties.

Boston.

Trade in cut flowers is unusually quiet here even for this time of the year. Local demands are very irregular and are confined mostly to funeral occasions, which are bound to occur whether times are good or bad. For the seaside resorts the customary calls are missing, and this department of the wholesalers' business promises to be a failure for this year. The street boys even are no longer any help as an outlet for the surplus, as the city authorities have curtailed their privileges again. This apparently does not help the local stores to any extent, for they are just as idle as they can be, and

they could be no worse if there were five hundred boys in the street.

Roses are, with a few exceptions, of miserable quality. Carnations are fair. There are a few longiflorum lilies coming in which sell at \$8 per hundred, not a bad price for the season. Sweet peas continue in oversupply, bringing in many instances not over 50 cents per thousand. Asters in all colors are abundant and cheap. Pink pond lilies, and in fact all fancy varieties of pond lilies, lack their former attractiveness apparently, and remain in the store windows until they close their petals permanently.

It was a very happy party that went to Milton August 2 on invitation of Mr. Wm. J. Martin, the gardener, to visit the grounds of Mr. N. T. Kidder. The grand beds of hardy herbaceous plants never looked so well. Jackson Dawson was one of the party, which is equivalent to saying that the trip through the grounds was an educational one, and everyone came away with the feeling that he had learnt something. Mr. Martin has some promising chrysanthemums which ought to be able to give a good account of themselves by exhibition time. In the houses the stove plants are in their usual fine condition and a fine lot of ericas received especial praise.

The display of aquatics at Horticultural Hall on August 4 was most attractive, Dr. R. H. Faunce and L. W. Goodell

showing fine collections. *Nelumbium Kermesina*, from Dr. Faunce was greatly admired and his seedling *Nymphaea odorata* received a complimentary notice. Other interesting features of the exhibition were the hardy phloxes from T. C. Thurlow, N. T. Kidder, Rea Bros. and F. B. Hayes, Mr. Thurlow's collection being remarkably fine, and extensive displays of tuberous begonias, gloxinias, asters, gladioli, hardy herbaceous and native flowers.

Atlantic City talk is in the air and the prospects are for a large and representative delegation from this vicinity. The Boston party will go by the Fall River line on Sunday evening August 19, joining the New York delegation on special train from Jersey City.

Mr. H. W. Gibbon of Hitchings & Co. was in town the past week. He has secured the contract to build a pretty range of palm and greenhouses for Mr. W. F. Burden at Newport.

Mr. W. A. Burnham of Lord & Burnham was also in town. This firm has just completed some fine houses for E. B. Clapp at Dorchester.

New York.

Roses as they come to the market now show unmistakably the severe effects of the hot weather. The great bulk of those being received are very poor indeed. There is but little demand for them, good or bad, excepting in the case of American Beauty, which it good sells fairly well. Asters are very abundant and will soon apparently rival the sweet peas in their ability to get in everybody's way. Steamer orders are few and far between this year, and the retail florists are disconsolate accordingly.

There is rejoicing on Canal street, abundant smiling all over the city, and the sun shines brighter in New Jersey, for a young Mr. Weathered has put in an appearance, and the illustrious lineage is now secure for another generation. Charlie can now go to Atlantic City, but he has grown in stature so that his old friends would scarcely recognize him. He would not change places now with any man on earth.

Siebrecht & Wadley have just finished planting nine houses of their new rose, Belle Siebrecht. Mr. Siebrecht says that the principal trouble he finds with it is to keep the flower buds picked off.

Alex. Burns has met with a sad bereavement in the loss of his youngest daughter, aged 1 year, 9 months, who died on July 30 after a few weeks' illness.

Philadelphia.

There has been quite a change in the weather, which is much cooler. We suppose the fellows that watch the thermometer in Washington are about to take their vacation. At any rate the relief is great and it is to be hoped there will not be another hot wave until next summer. Heavy rains have also fallen and there is much to be thankful for.

The summer trade is about as usual, with probably a little better business than common the past week on account of funeral work that seemed to be pretty well distributed among all the stores.

The "crape pullers" are becoming quite numerous. We would not be greatly surprised if they soon formed an organization to give them an air of respectability as it were. An advertisement appeared in a morning paper recently among the wants for a man to solicit orders for

floral designs for funerals. We have seen some pieces sent out by these gentry that were very fair, but most of their work is atrocious, only the cheapest and poorest flowers are used, and when at all scarce cape flowers are substituted and form the bulk of their stock in trade.

There would seem to be plenty of flowers for all the business there is doing; in fact most of the time the growers are lucky if they sell out. Any extra demand, however, uses up the stock on hand in no time and then it is the dealer who does the hustling. Valley has been scarce since the hail storm at Newport, and but for Lukens, of Burlington, and Edwards, of Bridgeton, there would now be a dearth of this popular flower. Cold storage valley brought at one time in this market \$12 per 100 and sold for \$2 per dozen at retail. Now \$4 per 100 is the wholesale price and it brings but \$1 per dozen over the counter.

In speaking to a grower recently he said the most expensive department of his place was the dump. What it cost him to keep this up every year would pay his coal bill. He believed in keeping his stock fresh, clean and up to date in variety and did not hesitate to put sick plants on the dump rather than nurse them, or discard old varieties for new ones if he saw merit in them. How often plants are seen occupying good table room that ought to be on the rubbish heap. It may seem like throwing money away, but greenhouse room is valuable and it is better to stop the loss at once and try to catch up on the next crop.

There is quite a good deal more that might be said about the social part of the convention, but while the arrangements are nearly all perfected so much depends on the weather that it is not certain just how everything will be carried out.

There is one thing that will interest the bowlers, and that is that the alleys on which the match is to be played are to be made regulation. The pins are to stand twelve inches apart from center to center. The Phila. club will furnish a lot of balls in addition to those on the alleys, and other clubs can send what they choose, only none must be over 27 inches in circumference.

To the fishermen we would say that all kinds of the finny tribe are biting better than for several years past and good sport is the result.

The meeting of the Florists' Club last Tuesday evening was a large and enthusiastic one. Every chair was taken and every one seemed very much interested in the proceedings. The large attendance was partly owing to the near approach of the convention, but the fact that President Lonsdale was to read a paper entitled "A few notes about commercial orchids," was responsible for the greater part of the gathering. His paper was all that was expected of it, a very practical one, while at the same time it was instructive and entertaining. He was voted the thanks of the club and the paper was directed to be given to the committee on publication.

The principal time of the meeting was taken up by reports of the various committees. Nearly all have their work up to date and are very enthusiastic over the outlook.

John Burton, who has charge of the shooting match, is doing all he can to get a team together to represent Philadelphia and is to have a lot of the boys up near his place on Friday next to try their hand and see what they can do.

Mr. Westcott, of the bowling committee, had all the prizes on exhibition

and they were much admired. He thinks from the entries that he has received and from other clubs that are sure to be on hand that there will be at least ten clubs in the contest. He expects some fine scores to be made and thinks there will be many surprises.

The entertainment committee report that the entertainment on the Iron Pier Friday evening will be of a social nature and everybody will be made to feel at home.

A fine gavel and block was presented by the committee having this matter in charge. The gavel is of dogwood from the late Geo. W. Childs' place at Wootton, and the block from a piece of wood taken from the Michigan log cabin on same place. The gavel has three silver bands and together with the block makes a fine and useful ornament for the president's desk.

There was a special meeting of the club called for August 14 to take any further action that might be necessary in convention matters.

There will be a very large delegation from this city, and it is hoped that the attendance at the convention will be larger than ever before. K.

St. Louis.

The welcome rain of last week has had the effect of livening things up wonderfully and the change in temperature has been most marked, the nights being real cool, the glass going to 58° and 60° right along. Trade however, or what there is of it, remains the same, the only event of importance being the addition by Mr. Wm. Ellison of a wire work department to his wholesale cut flower store, this being something he has long contemplated.

The bedding in Forest Park looks well, there being more of it this season than ever before, and it has been done with much greater taste. The indications are that it will be increased from year to year, as they are adding the present season one 50 by 18 equal span house to the three they already have; the latest to be used for palms and the other large plants used during the summer in the out door work.

The 21x96 foot, three-quarter span house, building at Shaw's Garden, has recently been completed; the finishing touches were delayed over a month owing to the half inch slate of which the bench bottoms are made, being tied up in the strike on its way from the quarries in Pennsylvania. The house is built in three sections and so arranged that different temperatures can be maintained in each. Mr. Gurney expresses himself as being pleased with the work.

Mr. Huckle of Belleville has also been troubled on account of the strike, his new rose house being finished with the exception of the ventilating gears, which are somewhere between here and the foundry.

Julius Koenig is erecting an 18x80 foot three-quarter span house, in place of two smaller ones that have been torn down, he reports everything as being quiet in North St. Louis.

Busch and Purzner, of Jefferson City, are erecting an 80x20 foot, three-quarter span house. It is to be heated with hot water under pressure.

An indiscreet letter from one of our members to a fellow craftsman in Cincinnati, and the unexpected use to which it was put, has rendered useless the work accomplished in securing reduced rates to the convention. At present all negotiations are declared off by the railroads,

Hotels at Atlantic City, N. J.

who declare that nothing but full rates both ways will be sold. This decision came in the nature of a disagreeable surprise to a party of seven that had decided to leave on the 6th, spending some time on the coast before the convention. As soon as it was found that the rates given were declared off the party dwindled to three. When it is understood that the falling through of negotiation costs each member attending the conventions \$22.50 more than it otherwise would have done as well as placing the florists in the eyes of the railroad making the rate as untrustworthy and not to be depended on the vigorous kick and severe comments heard from all can be understood. It is extremely doubtful if any thing can be done in time to go to the convention and if better rates than those offered at present cannot be had it is extremely doubtful if there will be enough St. Louisans in Atlantic City to compose a bowling team. R. F. T.

St. Paul, Minn.

Every line of business here is dull, and the florists' especially so. In a retail way quite a good many flowers are used for funeral work, but outside of an occasional order in that line nothing whatever is selling. The growers especially are feeling glum, but as one of them recently remarked, "What can you expect when strikes, protracted drouth and congressional dilly dally upset all calculations."

Rose planting is completed and mums are well along. Growers have taken advantage of the dull season to get their houses in shape for another season's business, and places visited are looking better than for several years past.

In roses some fair Meteor and La France are being cut. Kaiserin retains its good qualities and with the increase in the size of the blossoms as the season advances promises to fulfill the predictions made for it, viz., the best white rose yet introduced for summer forcing. Some Beauties, new crop, are being cut, but the quality is poor. Sweet peas are nearly gone, the intense heat and drouth having ruined them. Gladioli are looking fairly well, though the spikes are smaller than usual. In common with everything else they are suffering from the lack of rain. Carna-

tions are standing the season well and forming good stools, though a good rain would be beneficial to them. Violets outside are small but healthy.

Vegetation throughout the city has suffered terribly. Shade trees are dying by the hundreds, while green lawns are a luxury. Our florist friends who are without city water feel the need of it more keenly than ever. Hydrangea paniculata is now in bloom and with its wealth of blossoms in long drooping clusters emphasizes its worth more strongly than ever. As a late summer flowering shrub it stands without a peer in this section. Some fine clematis are also seen in full bloom, proving that with proper care and protection they can be grown as successfully here as in more favored localities.

We regret to say that St. Paul will not be well represented, if at all, at the convention. This is to be deeply regretted, as many practical points and hints will undoubtedly be learned at the meeting.

Brother Taplin in his very able article in your last issue hits the nail on the head in advising florists to organize and maintain prices. If we had more of such sermons daily it would be a benefit to the craft at large. Right here in these twin cities we have reaped some of the fruits of cut prices, and yet florists attributed poor sales, etc. to department stores. While it should be the aim of every grower to sell all his stock a little judicious advertising in local papers and "bargain days" for surp'uses would find everything sold at the end of the season and no very bad cut made at any time.

We note but very few double white and pink hollyhocks and no summer grown Bermuda lilies. For funeral work these are very fine and should not be overlooked another season. With a little extra protection hollyhocks can be wintered over nicely. FELIX.

Toronto.

There is some stir in florist circles over the alleged selling of plants and cut flowers by a public institution just outside the city at less than market prices. A committee was appointed by the G. and F. Association to inquire into the matter, and a meeting was held, which the gar-

dener of the institution said he would attend and make satisfactory explanations, but as he did not turn up the meeting adjourned after waiting for an hour not in the most amiable state of mind, and will probably interview the manager or directors. At present this institution has only a small area of glass, but there is a rumor that it intends to put up much more. Some of the boys think there is nothing in the whole business worth kicking about, and others think that though it may be only a small matter now it might develop into a big affair if not nipped in the bud.

Cattleya Dowiana is now flowering with Mr. Vair at Chestnut Park, and Cattleya chrysozona is blooming at the Normal Schools; the latter is a plant imported three years ago, and this is the first time it has shown bloom. It is not mentioned in Nicholson's Dictionary, but a colored plate of both may be seen in "Reichenbachia," if anyone is so fortunate as to be able to get access to that magnificent publication. Neither plates do justice to the originals, however; the purple in the original is much brighter and darker, and the veining finer and more distinct.

Very pleasant weather now—not too hot, not too cold, now and then a shower, just right. E.

Denver.

Business very dull.

Ninety days until the chrysanthemum show.

Every one is complaining of grasshoppers. They are eating up nearly all outside crops.

Foreman Beach, of Mauff's, wears a very satisfied smile when the subject of chrysanthemums is mentioned.

It is reported that J. L. Miller Floral Company have something in the way of a surprise to spring on the boys at our next chrysanthemum show.

The board of directors of the Denver Florist's Society have apportioned the prizes for the coming show. They have offered eight hundred dollars in all, besides numerous special premiums which have been offered by individuals.

The Park Floral Company, O. A. Wiggam, president, John L. Russell, manager, have erected four 18x100 houses, and one 11x100, on the ten acres recently leased by them from the Colorado State School Board. It is their intention to erect five more 11-foot houses in the near future.

The Colfax Floral Company are erecting a chrysanthemum house 125x23, in addition to their already large plant.

Harrison H. Given has completed rebuilding his rose houses at Lincoln and Alameda avenues, and has a large crop of roses and other cut flowers well under way for the coming season.

Mr. A. M. Lewis, the manager of the Colfax Floral Company's store, is taking a short vacation at Evergreen, Colo., in the heart of the Rockies. He took four pounds of smoking tobacco, two cases of beer, a gallon of bottled hardware, four fish books, a loaf of bread, and a can of sardines with him, and announced his intention of depopulating Bear Creek of its finny inhabitants; hence the large amount of "bait." Mrs. Lewis will endeavor to accommodate the large rush of patronage the store will have during his absence.

Mr. C. J. Hurt, Harman, Colo., has completed a new range of greenhouses, 7,000 square feet of glass in all, which will be devoted to raising choice cut flowers and bulb forcing.

A visit to Gallup's greenhouses at University Park, shows a remarkably fine stand of roses. Mr. Adams, foreman of this place, makes a specialty of Woottons, growing them so perfect that they readily command "Beauty" prices. Mr. Adams does not have a visible growth of specimen chrysanthemums for the show, but made the remark to your correspondent that "it was not always necessary to grow a lot of plants to grow to perfection." There is a suspicion among the boys that Adams keeps his best plants in the coal hole out of sight of visitors.

Harrison H. Given has returned from a short vacation at Deansbury, in Platte Canon, where he and his wife have been for several weeks past on account of Mr. Given's bad health.

A visit to Wolhurst, Senator E. O. Wolcott's Colorado home, at this time of the season, shows a sight not to be seen any place else in the west. A more complete experimental grounds could not be imagined. Mrs. Wolcott, who is an ardent admirer of all that is horticultural and floricultural, has spared no pains or money in securing plants and shrubs from all quarters of the globe, and, with the able assistance of Superintendent John Berry, the result is that after three years growth the grounds present a scene to delight the eye of any admirer of the goddess Flora.

Denver florists have requested your correspondent repeatedly to call the attention of the outside world to the fact that Denver already has four times as much glass devoted to growing cut flowers, in proportion to the number of inhabitants and tributary country, as any city in the United States. A large amount of glass that has been built in the last two years is paying poorly, if at all, and it is to discourage the investment, or the thought of investment, of eastern capital in the florist's business in this city that this item is written. If any florist is thinking of Colorado, or Denver in particular, as a field of new operation my advice is to look the ground over personally before you decide to invest.

The board of directors of the Denver Florists' Society are anxious to receive exhibits of cut chrysanthemums from growers in any portion of the United States at their coming chrysanthemum show November 7. All such exhibits will be cared for and staged by the committee and the length of journey they have undergone will be taken into consideration in judging them for prizes. The prize taken last year by E. G. Hill & Co., of Richmond, Ind., for twenty-five best blooms, is offered again this season, and it is hoped that the competition for this particular prize will be close and that many entries will be made in this class, as the premium is well worth competing for, as Messrs. Hill & Co. will testify. It is also hoped that the premium cup offered by Harrison H. Given for the best seedling chrysanthemum not exhibited before this season, will be liberally competed for. Any person desiring information as to our show will receive the same by addressing Adam Kohankie, box 275, South Denver, Colo. H. H. G.

Cleveland.

J. C. Gooding recently brought suit against Harry Gordon, proprietor of the Gordon Greenhouses, for \$298 back salary. The defense claimed that while Mr. Gooding had charge of the houses stock so depreciated that the flowers grown would not bring first-class prices as they should in an open market. The jury re-

turned a verdict in favor of Mr. Gooding for the full amount.

The writer paid a visit to the Cushman gladiolus farm this week. It is located in Euclid, O., and is accessible by the electric cars from this city. There were gladiolus in all stages of growth, from the little infant to the great grandfather, and acres of them in full flower. One lot of seedlings of Mr. Cushman's own saving were exceedingly fine and of great promise, there being so many fine white, pink and yellow flowers among them. Mr. C. has secured space at the forthcoming convention and will make an exhibit of cut blooms. L. F. D.

New Notes.

DWIGHT, ILL.—Aaron Good is starting in the business here.

WATERTOWN, WIS.—Loeffler Bros. are erecting a new house 10x80 for violets.

ALLIANCE, O.—Our season's trade was good. No cuts in prices and collections good.

ELMIRA, N. Y.—L. A. Lacharme is building 4 greenhouses, each 125 feet long, for growing cut flowers.

PAINESVILLE, OHIO.—Wm. C. Werner has erected three houses and entered the trade here as general retail florist.

CINCINNATI, O.—The assignee of Chas. J. Jones, Jr., reports it doubtful if the general creditors will receive any dividend.

LAKE GENEVA, WIS.—The Button Bros. are together again and the firm name has been changed back to Button Bros. & Co., as it was before the change last month.

DENVER, COLO.—The Colfax Avenue Floral Co. is adding two new equal span houses 25x125 for carnations, also lengthening their propagating house by a 25-foot addition.

SACRAMENTO, CAL.—Spring plant trade was about 25% less than last year. Collections more difficult. New florists that have started during the past year are C. B. Strong & Co. and H. McWilliams.

PEORIA, ILL.—The wife of Mr. James C. Murray, the florist, died July 25, after many weeks of suffering. The funeral was held Friday, July 27. Mr. Murray has the sympathy of his many friends in the trade.

WATERVILLE, N. Y.—Stewart Ritchie for the last nine years with William Osborne, has bought a place at Newport, R. I., and will move there on the first of August. He will run a regular greenhouse business.

PITTSBURG—The third annual picnic of the Putsburg and Allegheny Florists' and Gardeners' Club will be held at Ross Grove August 9. The committee of arrangements is composed of Messrs. J. Bader, E. C. Reineman and E. C. Ludwig. A good time is assured.

READVILLE, MASS.—Walter Butler has just added a new greenhouse 65x25, connecting it with two others 100 feet long, also a boiler house with two stores overhead 32x16. He has built 1 200 running feet of benches and will grow this season lilies, chrysanthemums, Jacqs and carnations.

DENVER, COLO.—Edward W. Pike, well known to horticulturists of Indiana and Illinois, died July 26 near this city from

injuries resulting from a fall from his buggy. Mr. Pike was 78 years of age and had lived in the neighborhood of Chicago for nearly 50 years. He was one of the pioneers in horticulture in the west.

LOUISVILLE, KY.—The florists of Louisville have decided to hold their fifth annual chrysanthemum show November 6 to 10 inclusive. Although the prospects for financial success are not very flattering it is to be hoped there will be no great loss. Full information may be had by addressing the secretary, Mr. H. Nanz, 582 Fourth avenue.

BROOKLYN, N. Y.—Mr. Joseph Sormani, a young Dutch florist, who three years ago settled in Flatbush, after coming here from California, where he had charge of extensive vineyards, will shortly open a large floral establishment on Fort Hamilton avenue, near Greenwood Cemetery, in association with Mr. Emile Bunnekamp, a Holland bulb importer.

SAGINAW, MICH., EAST SIDE.—The firm of A. Grohmann & Sons will hereafter be known as Grohmann Bros. The two junior members of the old firm, Messrs. Edward A. and Albert A., compose the new firm. They are erecting three new houses 18x100 and one 18x50, also boiler house and dwelling at their new grounds, 3369 South Washington avenue, opposite Forest Lawn Cemetery.

SPRINGFIELD, MO.—Mr. Rudolph Koepfen has sold out to Messrs. E. Koepfen and W. A. Staley, who will continue the business under the firm name of Koepfen & Staley. They have torn down one old house and have added two new houses for roses, one for carnations and two for general plants. They will also have about 2,000 feet of glass on hotbeds the coming winter. Their place is at 1205 to 1213 Boonville street.

Chicago to Atlantic City.

The Chicago Florist Club has secured a special low rate to the S. A. F. convention at Atlantic City, over the Pennsylvania railroad. Train leaves Chicago at 3 p. m. Sunday, August 19, passing over the Allegheny Mountains in daylight and reaching Atlantic City Monday evening. Florists in the west and northwest who wish to join the party are cordially invited to do so. Berths may be reserved and further information obtained by addressing the chairman of the Chicago Club's committee, Mr. G. L. Grant, 322 Dearborn street, Chicago.

Catalogues Received.

Chas. D. Ball, Holmesburg, Philadelphia, Pa., palms, ferns and decorative plants; Mrs. T. B. Shepherd, Ventura, Cal., seeds, plants and bulbs; Edwanger & Barry, Rochester, N. Y., pot grown strawberries; Schleez & Fottler, Boston, bulbs and supplies; W. Baylor Hartland, Cork, Ireland, daffodils; J. L. Dillon, Bloomsburg, Pa., roses; Peter Van Velsen & Sons, Houtvaart, Holland, bulbs; E. V. Teas, Irvington, Ind., nursery stock.

AT THE California Mid-Winter International Exposition, San Francisco, the Sunset Seed and Plant Co. were awarded gold medals for sweet pea seeds, sweet pea blossoms, ornamental and decorative plants, also for garden, field and flower seeds and horticultural requisites.

THE AMERICAN FLORIST CO.'S DIRECTORY REFERENCE BOOK

FOR 1894
CONTAINS THE FOLLOWING:

1. The names and addresses of the Florists, Nurserymen and Seedsmen of the United States and Canada, the exact branch of the business each is engaged in being indicated.
2. A separate list of firms that issue catalogues, the space devoted to each branch of the business to each catalogue being also given.
3. A list of the names and addresses of superintendents of leading parks in the U. S. and Canada.
4. A list of the principal cemeteries of America at which the arts of the landscape gardener and florist are used in beautifying the grounds.
5. A complete, alphabetically arranged list of Roses in commerce in America with class, habit of growth, date of introduction, name of introducer, and brief, accurate descriptions of the flower of each. Synonyms are also plainly given.
6. A complete, alphabetically arranged list of Chrysanthemums in commerce in America, with class, and brief, accurate description of each. Synonyms are noted and varieties that are very popular with American growers are designated by a star, and this year's introductions by a dagger.
7. A complete, alphabetically arranged list of the Carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each.
8. Seasonable Hints for the year, arranged in weeks, written by Mr. William Scott, and covering every detail of a general florist business. This is decidedly the most valuable contribution to the literature of the trade ever published. It is written in a plain, practical way, by a man who knows what he is talking about.
9. A historical sketch of the Society of American Florists from its organization to date, including officers for each year and lists of essays read at each meeting, with other information of interest.
10. A similar historical sketch of the American Association of Nurserymen.
11. A similar historical sketch of the American Carnation Society.
12. A similar historical sketch of the American Seed Trade Association.
13. Similar historical sketches of the Florists' Hail Association of America; of the National Chrysanthemum Society of America; of the Florists' Telegraph Delivery Association.
14. A complete list of all National and Local Trade Organizations, with names and addresses of principal officers, time and place of meetings, etc.
15. Statistics of Commercial Floriculture in the U. S. from the last census.
16. Statistics of the Nursery Industry in the U. S. from the last census.
17. Statistics of Seed Growing in the U. S. from the last census.
18. A list of Leading Horticultural Societies, with name and address of the Secretary of each.
19. Full information about Express and Postage rates on plants, shrubs, trees, seeds and bulbs.

No less than 270 pages of valuable reference matter in compact form, and all UP TO DATE.

PRICE \$2.00 POSTPAID.

ZIRNGIEBEL GIANT PANSIES.

Owing to favorable weather, have been magnificent this season. Never before have we obtained such size and colors; and as usual, wherever exhibited, have eclipsed everything else, receiving also the most flattering testimonials from the leading florists and seedsmen all over the country.

New seed ready now of both the Giant Market and Giant Fancy in trade packets of 2,000 and 500 seeds respectively at one dollar each, with practical directions for growing pansies.

PLANTS READY NOW:

GIANT MARKET . . . \$5.00 per 1000
GIANT FANCY 10.00 per 1000

DENYS ZIRNGIEBEL,
NEEDHAM, MASS.

PANSIES . . .

Every Grower Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders.

An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance.

ALBERT M. HERR, L. B. 496, Lancaster, Pa.

Pansy ★ Seed.

The JENNINGS STRAIN of high grade Pansy Seed. New crop now ready. Saved with special care from only the very finest varieties and (warranted) first-class in every respect.

THE JENNINGS XX STRAIN.

The cream of Pansies. Grand colors mixed. pkt., 1500 seed \$1.00; 1 oz. \$5.00.
The Jennings Strain, finest mixed, pkt. \$1.00 about 2500 seed; 1 oz. \$5.00; 3 ozs \$15.00. No skm milk in this strain. (They are just as good as I can make 'em). To my old patrons I would say they are a big improvement over last season—more variety and finer colors. The best strain for florists either for winter bloom or spring sales; all large flowering.

Black Dr Faust, finest, 1.00
Finest Yellow, black eye, 1.00
Pure White, the best, 1.00
Victoria, bright red, 1.00

Worcester, Mass.

On Thursday, July 26, the Horticultural Society held its weekly exhibition, and although there were many meritorious exhibits most of the interest centered on the sweet peas. The day preceding the show we were visited by a severe storm, and while the rain was very welcome we could have dispensed with the wind and hail, which spoilt a number of exhibits intended for this show. A great improvement was noticeable in the display of sweet peas, both as to the number of entries and the quality of the flowers; all the stands showed the results of careful culture and selection. The first premium was awarded to F. A. Blake, second to H. A. Jones. F. J. Kinney had a splendid stand but unfortunately did not conform to the schedule and was barred out.

There was also a good display of cut flowers. F. A. Blake captured another first, H. A. Jones a second. The display of Phlox Drummondii was very fair considering the fun the rain had with it. Mrs. Milton Rand secured first; F. A. Blake, second. In the bouquet class there was a goodly number of entries, and although there was lacking the usual good taste displayed in the make up of the bouquets, they were above the average; in the amateur class F. A. Blake first; H. A. Jones, second; florists, W. J. Wood first; Mrs. Thos. Ward, second. The display of hollyhocks was large, but not at all noteworthy; Mrs. F. H. Merrifield, first; J. A. Abbott, second.

For August 2 there was a short schedule, but notwithstanding a good exhibition that was well attended, the twenty vases of cut blooms, distinct varieties, was the chief attraction scheduled and brought out some splendid displays. F. A. Blake, first; A. A. Hixon, second. The amateurs had a good display of baskets made up in good taste; F. A. Blake, first; and Mrs. C. E. Brooks, second; florists, Mrs. Thos. Ward, first; W. J. Wood, second. Several good stands of native flowers were shown that were both interesting and instructive. J. A. Abbott, first; Florence Watts, second. A. A. Hixon had a splendid display of sweet peas, filling one hundred vases, and comprising forty-five standard varieties, and F. A. Blake showed a large number of seedling perunias that were very fine.

We have had considerable rain during the last two weeks, and outside stuff shows a marked improvement, carnations especially have picked up wonderfully and most of our anxiety on account of the drought has ended. Trade has been very fair, the bulk of it being funeral work. SEEDLING.

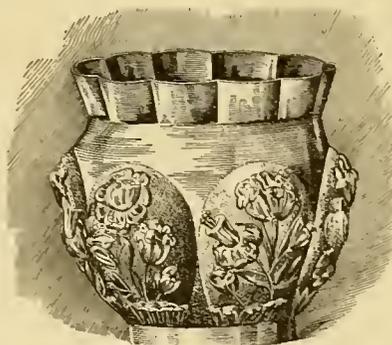

The Water Garden.

Special and Hardy Water Lilies of all colors. VICTORIA REGIA and V. RANDI, EURYALE FEROX. Nelumbiums in variety, Hardy Ornamental plants, sub-aquatic plants, etc., etc. Nymphaea Laydekeri rosea (awarded a Medal at World's Fair); most charming of all the HARDY Lilies; \$2 50 each. Other Columbian Novelties see catalogue. WM. TRICKER & CO., Clifton, N. J.

CHRYSANTHEMUMS

1000 IVORY, \$3.00 per 100. Also several thousand in variety, late propagated, just the thing for 4 and 5-inch pot plants. List of varieties and prices on application. NATHAN SMITH & SON, Adrian, Mich.

You will benefit the American Florist by mentioning it every time you write an advertiser in these columns.

JOSEPH HEINL, Jacksonville, Ill.

Wm. K. Harris

extends a hearty invitation to the members of the S. A. F. and their friends, to call on him, on their way to or from Atlantic City, and inspect his new place of over sixty thousand square feet of glass; over nine thousand feet of it being polished plate. The only greenhouses in the world glazed with this expensive glass.

A well appointed place, with everything adapted to the profitable production of our stock in trade, is not the only thing of interest here.

The clean, healthy growth of our plants is the admiration of many, especially the Rubbers. They are a wonder to all who have seen them! I have five houses full of this popular decorative plant, of all shapes and sizes, from a few inches to ten feet high, many of them making natural breaks—that is a plant producing many side shoots without being topped. This is a mystery to many, why mine should do so, and others not. The way to learn is to be taught, so come and see nature at work.

Plants, like people, are often stunted and sickly in the mansion, while the hovel contains health and vigor. In my plant palaces, health universally abounds, as we allow no excess of high stimulants among our occupants. They must all live upon plain fare, and take plenty of pure, fresh air.

Take train at Broad Street Station Penn. R. R. for 49th Street Station. It is only ten minutes' ride to 49th Street Station, and ten minutes' walk to my place from 49th Street Station.

Trains leave Broad Street Station as follows: 6:49—8:16—10:46 a. m. 12:13—1:28—2:18—3:15—3:47—4:33—5:16 p. m.

On Friday, August 24th and Saturday, August 25th, I will have a conveyance at 49th Street Station at the arrival of each train to convey my guests over. After inspection of my place, I will drive all who wish to see my friend Robert Craig. It is about a mile from here.

Cincinnati.

Echoes of the outing have about died away and the boys are all busy looking after water. The dry hot weather of the past few weeks has used up all the water in the ponds, and many florists are hauling from the creeks. Funeral work has been a little more plentiful during the past week, but business in general is quiet.

S. G. Cobb of Covington, Ky., has sold his greenhouses to Wm. Ruddel and Rob't Johnston. I understand these young men are not professionals in the business and have bought on speculation.

G. Brunner's Sons of Price Hill are cutting some nice smilax. This firm had quite an experience with a herd of fifty cows one night last week; nothing would satisfy their appetites but the young carnations; damage about twenty dollars, besides spoiling a good night's sleep.

W. J. Gray is cutting some very good Brides, Mermets and Perles. Rumor says that this gentleman will open a commission house in the city to dispose of his own stock.

Our party for Atlantic City is steadily gaining ground; have had some trouble with the railroads in getting rates positively, but think we will have same settled by Saturday, Aug. 4.

W. C. Nolan left August 2 on the Niagara excursion for Rochester, N. Y., on a few days' vacation. E. S. Johnston is camping out this week and trying to catch a few innocent little fish. George Magrie lost himself at the outing and did not return home for several days, but guess he had a date in Middleton.

A petition was filed July 31 praying for the dissolution of the Huntsman Floral Co. of 37 and 39 West 4th street. The petitioners are Edward A. Tucker, who owns ninety shares of stock, and James Dillaby, who owns ten shares. The authorized capital is \$10,000, the shares being \$50 each. Only \$7,900 of the stock has been issued. The incorporation is insolvent and it is deemed to be for the best interests of creditors and stockholders that it should be wound up. The assets are about \$900 and the liabilities are \$5,519.67. The other stockholders are: Henrietta C. Huntsman, twenty shares; Frank Huntsman, six shares; Oakwood Rose Garden Company, ten shares; Michael Dumer, sixteen shares; and O. F. Blackburn, D. D. Bramble and Herman Muller, two shares each. Wm. G. Roberts is counsel.

Our visitors in the city this week were H. M. Altick of Dayton, O., and Fred Weltz of Leo. Weltz's sons, Wilmington, O.

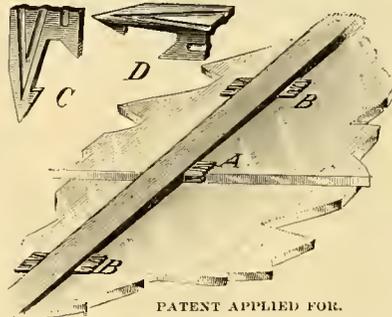

Supt. of Parks Warder has at last received sanction of the board of aldermen in his scheme to purchase a conservatory for the parks. Mr. Warder has done quite a good deal of bedding this season, and has been untiring in his efforts to beautify our parks, and so far has succeeded admirably. G.

WISHING TO INTRODUCE to the Florists our Pan, knowing what a good thing it is, we offer sample crates f. o. b. Detroit, which contains 51 5-inch, 24 6-inch, 21 7-inch, 20 8-inch, 16 10-inch and 15 12-inch, for \$7.40 cash with order. This is the price we sell by the 1000.

Of the many testimonials that we receive we call your attention to the communications of two of the best known expert Florists in this country:

DETROIT, July 19, '94.

DETROIT FLOWER POT CO.

SIRS:—We wish to say that we have used the Pans (as made by you) for the past seven years, and find them very useful for many things, such as bulb forcing, window and table decorations, fern growing, and might say we find them almost indispensable around greenhouses and store. We grow a great many single stem "mums" in them—one in a 5-inch pan up to a dozen to fifteen in a 12-inch pan, and cannot recommend them too highly to florists.

Respt yours, JNO. BREITMEYER & SONS.

BUFFALO, N. Y., July 17, '94.

DETROIT FLOWER POT CO. SIRS:—Will mail you my order for Pans in a few days. Don't be afraid to make up a good stock of them, for when the florists find out what a good thing they are for bulbs, ferns, seed pans, etc. you will have a grand rush for them. I use them for forcing all bulbs, and find the 8 and 10-inch grand for Tulips, Romans, Narcissus, Daffodils. The 5, 6 and 7-inch for Ferns, Freesias and Valley, and any of the sizes are good for table and window decorations. I also find them a grand thing for growing "Mums" to single stem flowers; an 8, 10 or 12-inch pan with from 10 to 20 plants is a fine thing.

Respectfully yours,

WM. SCOTT.

Cleaning Flower Pots.

In horticultural magazines there have appeared from time to time inquiries about pot washing machines. It seems that no machine capable of effectively performing such work has yet come into existence. Washing large quantities of pots is out of the question unless it can be done rapidly and at a very small expense. Moreover the foreign matter on pots is not merely superficial, but more or less fills the pores. To attempt to remove it by mechanical means is soon found to gird away any kind of instrument that may be used, whether in the form of cloth, brush or steel scraper. It seems therefore unlikely that any effective pot washing machine will ever be devised.

There are, however, always more than one way of reaching a given point. A cheap and thoroughly satisfactory method which the writer believes he is original in suggesting is to bury the pots in loose moist earth, humus, or rotted tanbark during a few weeks or through the summer. During this time the organic matter on the sides and in the pores of the pots is decomposed, and at the end of the time they may be taken out and will be found to be almost like new pots.

The pots should be piled up loosely and the light soil or mould worked well around them. The whole should then be watered thoroughly and from time to time as required to keep the humus damp, but not wet. A very slight degree of moisture promotes the decomposing process and makes it more thorough than too great a degree. ERNEST WALKER.
New Albany, Ind.

New Orleans.

At the recent supper of the New Orleans Horticultural Society, reported on page 1242 of our issue for July 26, the supper room was tastefully decorated with plants by Mr. H. Papworth, and a handsome plateau of roses was contributed by Mr. J. H. Menard, while Abele Bros. sent two fine bunches of roses. Great credit is due the committee of arrangements, consisting of Messrs. Chas. Panter, J. H. Menard and C. W. Eichling.

The "Souvenir toothpicks" were the gift of an honorary member of the society. The "picks" were plant labels, upon which was printed "Souvenir toothpick, N. O. H. S., 1894." They caused much amusement.

The Progress of a Decade.

The convention of the Society of American Florists at Atlantic City will possess a special interest for all who have been loyal supporters of the organization from its inception as well as for those who have more recently become identified with it, from the fact that this meeting will be the tenth anniversary of the founding of the society.

Floriculture and her allied industries have made great and rapid advances during the ten years just passed, and their progress and prosperity may be attributed in no small degree to the well directed effort and beneficent influence exercised by this grand organization. In the following notes we have endeavored to give our readers a brief retrospective glance at the society's history and achievements and a review of the practical advance made in a few of the more important lines of commercial floriculture during the decade over which the society's existence has extended.

It was on the occasion of the annual meeting at Chicago of the "National Association of Nurserymen, Seedsmen, Florists and Kindred Interests," that the first steps were taken toward the organization of the Society of American Florists. The date was June 19, 1884. A number of gentlemen, some twenty or more, who were attending the convention, in accordance with a verbal understanding, met in one of the parlors of the Sherman House. The desirability of an independent national organization of those engaged in floriculture was talked over and ways and means discussed, the result of the meeting being the selection of John Thorpe as president and E. G. Hill as secretary, and the appointment of a committee to issue an address to the florists of America. A strong point made in the address was the matter of protection from losses by hail storms. Without this incentive it is extremely doubtful if the Society of American Florists had been a reality for several years at least.

The members present and most of those joining the first year in response to the call issued at this meeting paid as membership fee the sum of \$5. This sufficed to put the young organization on its feet and the funds were wisely expended in advertising the society, its aims and possibilities among the florists of the land. This was not so easily accomplished in those days, for the trade papers now found so valuable a means of communication were then unheard of and it required continued and persistent work on the part of the founders to accomplish what they did. But from the very first moment of the opening session at the Cincinnati convention on August 12, 1885, there could be no longer any doubt as to the future of the young organization. The enthusiasm of that meeting has never been excelled in any that have succeeded.

The AMERICAN FLORIST had its birth at the Cincinnati meeting, and all through the nine years that have passed it has been an earnest co worker with the national society in everything for the material and social elevation of the craft and may conscientiously claim a share with it in the great advancement which has been made.

The great contests over the respective merits of steam and hot water heating, the pertinacity of the hail insurance advocates in the face of indifference and direct opposition, the sharp personal encounters of those early meetings are fresh in the memory of many. It was a new experience for the florists to get together and talk it out, and they took full advantage of it.

In the years that have passed since then the Society of American Florists has justified all that was promised for it. The uniformity in sizes and shape of flower pots, the special postal rates on seeds and plants, reduced express charges on plant shipments, reform in plant nomenclature, the Florists' Hail Association, the Florists' Protective Association, are all the direct result of well directed effort on the part of the Society of American Florists, while the numerous Florists' Clubs and other similar organizations owe their existence to the good example set and encouragement extended by the parent society.

Many of those who took active part in the early work of the society have been taken away by death, and the list of those whose names have thus been removed from the roll comprises many whose reputation is world wide. It is to the fact that the very best men associated with floriculture have affiliated themselves with the Society of American Florists that its great influence and continued prosperity are due. The score of earnest workers have drawn to their support the very best brains in the profession until now, a thousand strong, the power for good centered in this organization is incalculable.

A glance at the program prepared for the meeting at Atlantic City, the subjects to be discussed and the men eminent in their various lines who are expected to participate, give promise of a meeting this decennial year which will be in every way worthy of the occasion. The number of new names presented for membership this year we are informed is unprecedented and every inch of available space in the exhibition hall was sold nearly a month ahead of the meeting. The Society of American Florists has every reason to feel proud of its position at the end of its first decade.

INDUSTRIAL PROGRESS.

Perhaps nothing can demonstrate more clearly the variety and extent of the many industries which have come to be our auxiliaries, and the skill and ingenuity

THE HEADQUARTERS of the AMERICAN FLORIST at the Convention will be at Hotel Dennis.

NOTE change in arrangements for transportation from Chicago to Atlantic City on page 56.

which have been expended on devices of value to floriculture, than a list and description of the varied exhibits which are to be placed in order for our inspection at Atlantic City. By the kindness of the superintendent of the trade exhibition, Mr. Geo. C. Watson, we are enabled to present herewith a diagram of the hall with the allocation and space to be occupied by the exhibitors as described below.

At the right on entering the first exhibit will be that of Benj. Chase, Jr., Derry, N. H., (No. 49) who will show a full assortment of pot and tree labels.

On the right wall table next comes H. Bayersdorfer & Co., of Philadelphia, (No. 45) manufacturers and importers of Florists' Supplies, with a large display of new baskets, metal and porcelain designs and general supplies, many of them the result of Mr. Bayersdorfer's recent trip to Europe, and illustrating the latest ideas of the artistic taste of the old world. Mr. Bayersdorfer staged a fine exhibit at the Cincinnati convention nine years ago and has never missed an exhibition since.

Next in order (No. 40) comes Frank L. Moore, Chatham, N. J., who will show shipping trays for cut flowers introduced by him in 1887 and now extensively used by growers for the market. Also will be shown for the first time the Workeasy Strap Buckle, a most useful and ingenious contrivance which must be seen to be appreciated.

Next the Snow Rustic Manufacturing Co., (No. 30) who will show rustic chairs, window boxes, plant stands, etc., including several novelties in the way of rustic work.

No. 19 is Thomas Woodason, Philadelphia, manufacturer of bellows for spraying liquid and dry insecticides. This is the first convention to which Mr. Woodason has sent his wares, but they are well and favorably known to the trade through the medium of the seed trade and supply men.

Z. De Forest Ely & Co., of Philadelphia, (No. 13) come next with a line of florists' bulbs and various supplies including some novelties recently patented. Mr. Ely's exhibits are always beautiful and instructive.

S. B. Arment (No. 51) will show grass receptacles for lawn mowers.

On the stage, right hand side, (No. 3) Major Bonnaffon, of Philadelphia, will show his detachable steel fence for farm, park, lawn or garden, easily put up or taken down and an excellent cheap trellis for sweet peas and other vines. Edwin Lonsdale, of Chestnut Hill, will have a display of plants "inside the fence."

The center of the stage will be occupied by Hitchens & Co., of New York, (No. 2) who will erect thereon a modern greenhouse for both private and commercial purposes, showing various styles of benches, ventilating, hot water boilers, etc., in connection with same.

On the stage, left side, (No. 1) will be shown the device of the Chadborn-Kennedy Mfg. Co., known as the Chadborn automatic ventilator, which is intended to regulate the temperature in greenhouses. Its motive power is water, this being under control of a thermostat which is adjusted to any degree of heat desired in the houses.

Adjoining this will be found Thos. Weathered's Sons' exhibit of horticultural building, heating apparatus, etc., and the Quaker City Machine Co.'s display of their Challenge ventilating apparatus.

In front of the stage, right corner, (No. 8) will be seen the balanced ventilating apparatus of E. A. Ormsby, a most ingenious contrivance.

Next to Mr. Ormsby comes E. S. Schmid, of Washington, (No. 7) who will show aquatics and gold fish.

In the center in front of the stage (No. 6) Wm. Tricker & Co., of Clifton, N. J., will make a beautiful display of aquatic plants in a large tank in which will be included many new and choice nymphæas, of the hardy and tender, day and night blooming species, lotus flowers, etc.

To the left of Mr. Tricker (No. 5) will be located the Hose Connection Co., of Kingston, R. I., who will exhibit for the first time the Kinney pump, a simple and effective device for applying liquid manure

A. H. Hews & Co., of North Cambridge, Mass., (No. 14) come next with a full assortment of standard flower pots, seed and fern pans, also a new line of jardinières especially adapted to standard pots.

Next come Edwards & Docker (No. 20) with folding flower boxes. The Cushman Gladiolus Co. (No. 33) who will show cut blooms of seedling gladioluses, and John N. May (No. 26) who will place on exhibition the new American rose Mrs. Whitney.

Dan'l B. Long, of Buffalo, whose exhibit is next in order (No. 34) will require no introduction and a convention would not be complete without him. The system and order prevailing in the exhibitions of the society now are in no small degree the result of his abilities in that line exercised when he was a member of the executive committee. He will show his specialty, photographs of designs in cut flower work, with many additions and improvements since last year.

A. Herrmann, manufacturer of metal designs at 412 East 34th street, New York, comes next (No. 41) with metal designs in variety and cycas leaves.

A. Q. Wolf & Bro., of Dayton, O., (No. 48) at the left of the entrance to hall will exhibit the Champion automatic ventilators and Champion soil pulverizer and sifter, both valuable devices.

The entire center table will be devoted to exhibits of plants. The first in order (No. 47) is Robt. Craig, of Philadelphia. Here will be a fine collection of palms and foliage plants, new cannas, outdoor grown crotons, etc. Mr. Craig was a pioneer in the use of crotons for bedding purposes and was one of the first to demonstrate their value for this purpose. His collection is very large and will be one of rare interest in this direction. A batch of the new *Dahlia imbricata alba* will also be shown by Mr. Craig.

Passing down the right of center table, next to the Craig exhibit, will be the collection of palms and decorative plants from Chas. D. Ball, of Philadelphia, (No. 38). Mr. Ball is one of the best known of the famous Philadelphia palm growers and his exhibit is sure to be an attractive one.

Next (No. 33) comes Ellwanger & Barry, the prince of nursery firms, of Rochester, N. Y., who will show roses, perennial phloxes and other seasonable blooms.

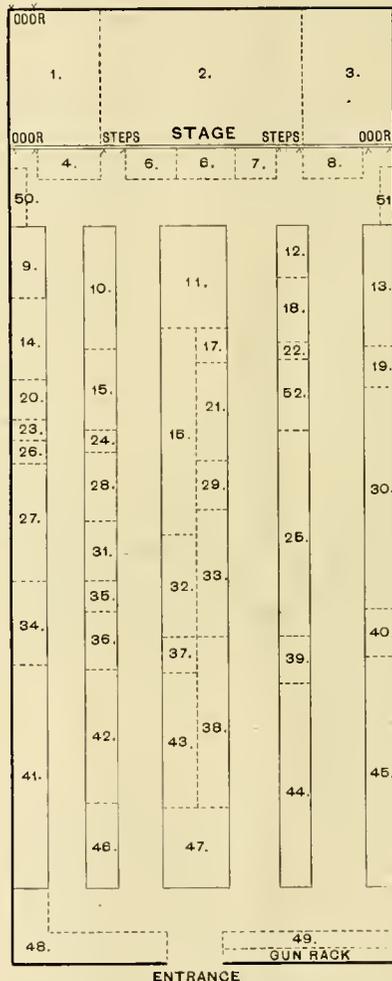

Adjoining Ellwanger & Barry will be Storrs & Harrison, of Painesville, O., (No. 29) who may be expected to show a good assortment of plants in their special line.

W. A. Manda, of South Orange, N. J., comes next (No. 21) with a display of novelties in foliage and flowering plants, orchids, bulbs, etc. Although Mr. Manda now makes his first bow as an exhibitor at the conventions he is no stranger to the trade personally and he is sure to receive a hearty welcome.

Next (No. 17) will come specimen plants of Mr. Lonsdale's favorite *Swainsona galegifolia alba*, a coming plant for florists' use for cutting, profitable to handle and easy to grow.

The end of center table facing the stage (No. 11) has been secured by the United States Nurseries, Short Hills, N. J., who will fill it with a display of palms and ornamental foliage plants in variety, as well as flowering plants, bromeliads, orchids, seeds and bulbs.

Passing up the left hand side of center table the next display will be that of Henry A. Dreer, Philadelphia, (No. 16) where may be found samples of the palms, ferns, araucarias and other decorative

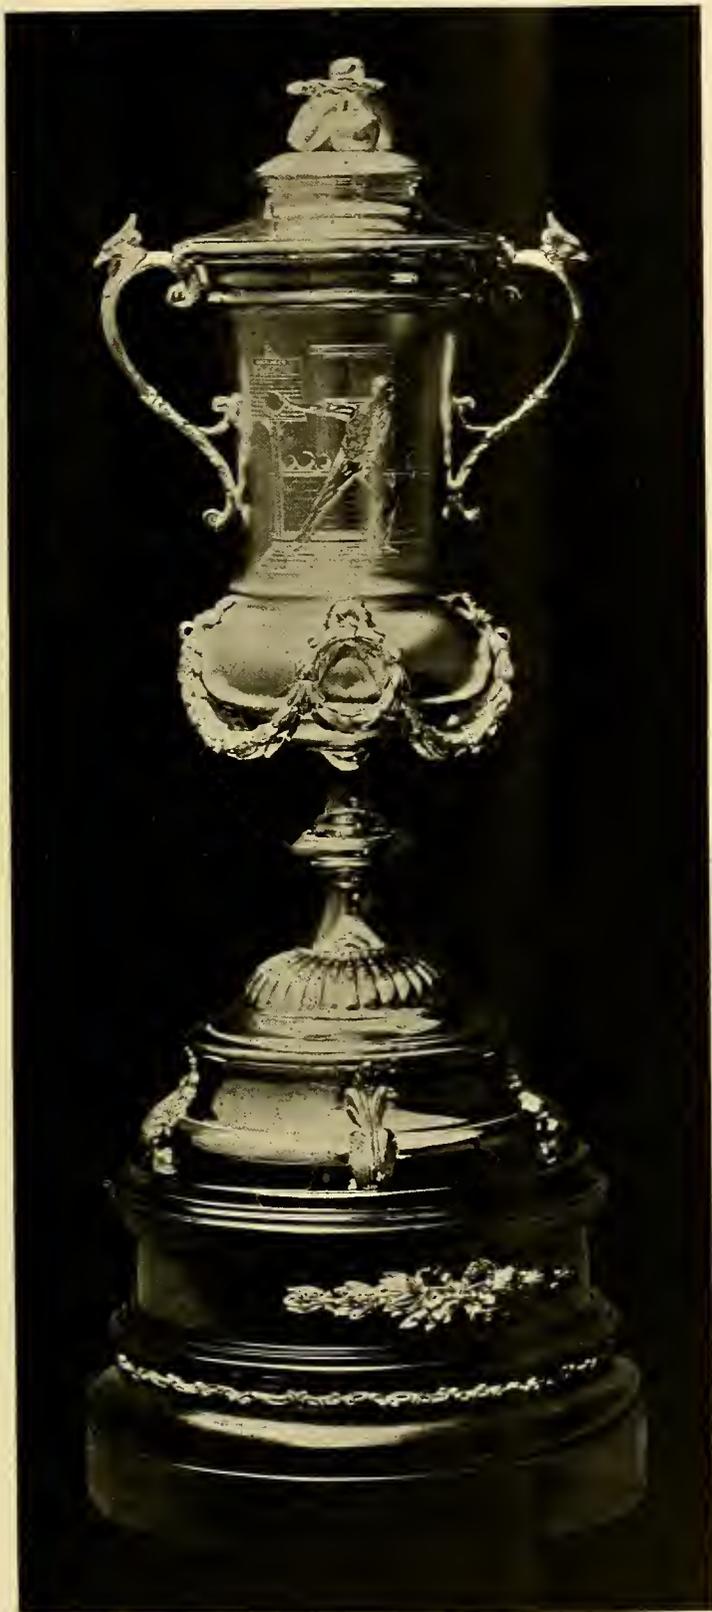

in the greenhouse or garden, also for spraying with fungicides and insecticides.

Next comes E. Hippard, of Youngstown, O., (No. 4) with the Standard ventilating apparatus. Those who did not attend the St. Louis convention have yet to see the new adjustable arm for this machine. The Standard ventilating apparatus was thought so well of last year at St. Louis as to be awarded a first-class certificate.

Starting from the stage the first exhibit on the left hand wall space (No. 50) is the Wisconsin Flower Exchange, of Milwaukee, who will show a set of their useful plant tubs, which supply a long felt want for something neat, durable and cheap.

Next is the exhibit of E. Kaufmann & Co., of Philadelphia, (No. 9) who will show a choice collection of florists' supplies. The display by this firm is always artistic and effective.

THE FIRST TEAM PRIZE IN THE BOWLING MATCH

plants for which this house is famous, cut blooms of new cannas, phloxes, etc., also French and Dutch bulbs and florists' requisites.

Adjoining H. A. Dreer will be found Siebrecht & Wadley, of New York, (No. 32) who will be on hand with useful plants for florists' use, orchids and interesting new plants.

L. B. Brague, of Hinsdale, Mass., (No. 37) comes next and will show his specialties, cut ferns, evergreens, moss and supplies of a similar nature. His place is up among the Berkshire Hills where these ferns are found in great abundance and in fine quality.

Between L. B. Brague and Robt. Craig will be found J. C. Vaughan, of Chicago

and New York, (No. 43) who will make an exhibit of splendid cannas, roses and other desirable plants for florists' trade.

At the head of the table to the right of center (No. 44) A. Blanc & Co., of Philadelphia, will display vases for florists' use and cacti in great variety, and it is safe to say that this will be found to be one of the most interesting spots in the exhibition.

Next comes the J. Horace McFarland Co., of Harrisburg, Pa., (No. 39) who will show samples of catalogue work for florists as written, illustrated and printed at the "Mount Pleasant Printery." Experts in catalogue work never fail to give unstinted praise to the technical skill of Mr. McFarland in his special line of horticultural printing, a class of work which it is difficult to get done properly in an ordinary printing office. A part of Mr. McFarland's exhibit will be an object lesson called "The evolution of a catalogue page."

J. E. Jeffords & Co., Philadelphia, (No. 25) are next in line with a beautiful display of jardinières, vases and ferneries, which are now indispensable to the stock of every florist who does a retail business. Messrs. Jeffords & Co. have promised to make the most complete exhibition of this class of goods ever shown at a convention.

J. Arnot Penman (No. 22) will occupy the space next adjoining, and will offer for inspection Nicholson's great work, *The Dictionary of Gardening*, which is the standard authority on nomenclature adopted by the Society of American Florists, also several other recently published horticultural works.

Next to Mr. Penman comes the Powell Fertilizer and Chemical Co., (No. 18) who will make an interesting exhibit of fertilizers, fungicides, insecticides and other chemical products of value to plant growers.

At the end of this table (No. 12) will be found the Pittsburg Clay Mfg. Co., of New Brighton, Pa., who will make a display of standard flower pots and terra cotta lawn vases. The exhibit will be in charge of their popular representative, Mr. W. H. Elverson.

At the upper end of table to left of center H. F. Michell (No. 46) will show bulbs, seeds and a full line of florists' necessities.

Next in order is the bulb and seed display of J. C. Vaughan, (No. 42) which has always been one of the most complete and interesting features of the society exhibitions.

The Parmenter Mfg. Co., of East Brookfield, Mass., (No. 36) are next with a full line of standard and fancy flower pots, jardinières, seed and fern pans and garden vases.

Next comes the Rose Mfg. Co.'s specialty, sulpho-tobacco soap (No. 35).

Just beyond will be The Whilldin Pottery Co.'s display of standard flower pots, seed pans, etc., (No. 31). Messrs. Whilldin date the period of their popularity with the florists to the time when they began to show their manufactures at these annual conventions and advertise them in the AMERICAN FLORIST.

Adjoining the Whilldin exhibit will be that of J. R. Wotherspoon, (No. 28) who will show the Eureka fumigator, the Wotherspoon watering pots and other specialties.

Next in order will come the Lockland Lumber Co., of Lockland, O., (No. 24) long time exhibitors and both widely and favorably known for their specialty, which is cypress wood work for greenhouse roofs, gables, gutters, plates, etc.

Just beyond will be S. A. Weller (No.

15) with jardinières in a variety of styles and sizes, and at the end of the table will be found C. H. Joosten, of New York, (No. 10) who will show the Fostite magazine bellows, hand and horse power, in practical operation, and will also have a line of forcing bulbs, azaleas, etc., and his special specialty, Fostite, the great remedy.

Number 52 is H. G. Faust & Co., whose display will consist of bulbs, seeds and an assortment of sundries.

Other exhibitors who came in late and will probably be found in the overflow exhibit in G. A. R. hall are Keller Bros., Norristown, Pa.; N. Steffens, maker of florists' wire work, New York city; Aug. F. Brabant, florists' pins, New York city; Worcester Wire Co., Worcester, Mass.

PROGRESS IN ROSES.

A well known rose grower, one of the most extensive as well as most successful in this country, on being asked to name a dozen of the best forcing teas, replied, "You can not find a dozen good teas." Considering the universal popularity of the rose, the time and industry which have been devoted to its improvement, and the countless number of varieties which have been introduced with ambitious titles and claims, this assertion, which is liable to stand uncontradicted, is significant as indicating the high standard prevailing in the American market and the heavy odds against which introducers of new varieties are forced to struggle.

The main points required in a forcing rose under the present conditions are a good constitution and its accompaniments, namely, vigorous and rapid growth, strong upright stem, good substance, rich foliage, and immunity from disease; large flowers borne on single stems, with persistent petals of clean color and no tendency to turn purplish; sufficient doubleness of flower to prevent exposing the center when full blown, but not so double as to interfere with free and rapid development of blooms in mid-winter; long and steady season of blooming.

The variety coming nearest to a combination of all these good qualities is the American Beauty, which is undoubtedly the grandest forcing rose ever introduced and has no rival in the market to-day. It has steadily maintained its price better than any other variety and the demand for plants the present season has been greater than ever before. Not every one succeeds with the Beauty. Its stubbornness has been the cause of many a heart ache, and frequently in winter it puzzles those hitherto most successful in its cultivation, rewarding their care and attention with unmarketable blooms and keen disappointment. As one prominent grower has remarked, "It's no trick to grow Beauty until you get the fire on; when the short days come, that's the test." The American Beauty can doubtless be made better by careful selection of stock. One grower who has been at work on it for some time claims a great advance in intensity of color.

American Belle, the Beauty's most promising offshoot, is a good thing with its originator, and with some others, but it must be confessed that in some localities it has not grown freely and has not as strong a constitution as Beauty. It is more useful than Beauty on account of its color, which is charming and does not deteriorate after being cut.

The Bride continues to be the foremost white rose and is rated by some growers as second to the American Beauty in de-

mand. One fault with it is the difficulty of getting any size to the buds in summer. It is noticeable also that in some places the Bride about mid-winter will get sick and die. This trouble seems to be a matter of soil, as in other localities under the same treatment it remains in full vigor until hot weather.

The same difficulty in getting size in summer as noted in the Bride is also found with the Mermet. The Mermet has certainly been interfered with to a considerable extent by the Bridesmaid, which has the merit of constant rich color even through the dark days of winter when the Mermet gets pale and badly off color. On the other hand the Mermet is charming when the clear days of spring come and is unquestionably a little larger flower. The Bridesmaid has evidently come to stay and it will be interesting to note in the immediate future whether it will, as its most enthusiastic admirers claim, supplant the Mermet completely.

Next to the American Beauty in value as a forcing rose stands the Meteor in the estimation of some of the largest growers to-day. Plants of this variety have been in great demand during the past spring and it has now taken its position as the foremost red everblooming rose. A glance at the history of the Meteor will not be out of place here. It was so little thought of by its raiser, Mr. Henry Bennett, that he presented it to Mr. Evans, the purchaser of the Bennett, with the remark "that it might be some use in America but was of no use to him." It remained in Mr. Evans' hands for about eight years, he growing it with indifferent success, and all the slow Philadelphia people concluded that it was not a safe rose to handle. Finally an enterprising New York grower bought it out, stock plants and all. Experiments with it under different conditions soon developed what its special needs under cultivation were, and it has been such a success that it is now considered indispensable by all the leading growers. It is a mistake to condemn a rose too quickly.

Mme. Hoste, although a very useful rose in its time, appears to be dropping out of favor, and the Kaiserin Augusta Victoria is likely to take its place. Hoste is valuable on account of its free blooming qualities and its elegant shape in mid-winter, but its season is short and as soon as the weather begins to get hot in spring it becomes poor. The Kaiserin on the contrary shows a decided improvement in hot weather and its season is much longer. There is some question as to its value in winter. In winter time it is not nearly as good as Bride and it suffers in comparison also on account of being easily bruised, but when its long season is taken into account it is found a profitable rose to grow. Freedom from mildew is another very strong point in its favor. It is one of the easiest roses to grow and is wonderfully productive, throwing two blooms for every one Bride.

Mme. Caroline Testout is a rose on which opinions vary as yet. The enormous demand for young plants the present season would indicate that it is in a fair way to become an established favorite. It is significant that Testout is being grown to-day by men who at first condemned it. The success with it varies greatly in different places and it is evident that the growers do not all know how to handle it yet. Its color is the purest tone of pink; it is in fact the only rose of the color in existence. It is a good grower and very free in soil that suits it.

Mme. de Watteville is not as much grown as formerly excepting by a few

New Yorkers who grow it superbly. Around Philadelphia it does not do first rate and they are inclined to drop it. But there is no color like it, its peculiar shading entitling it to the name of "the tulip rose," and it is not likely to be given up by any one who can grow it well.

Mme. Cusin is another rose which has made its greatest record in New York. One merit is its remarkably long season. There is nothing to beat it for freedom of bloom and it is second to none as a winter rose. Its small size is against it as a permanent favorite and south of New York this defect is most apparent.

Perle des Jardins still remains the best yellow. Unfortunately it gives too many poor and deformed flowers in winter and as a winter bloomer it has seen its day. Other yellows have been heralded as sure to take its place, but they have not done it. There is, however, very little demand for yellow roses as compared with a few years ago. Sunset is still a favorite with a good many. This rose varies very much in color, and by propagating only from the rich dark colored forms the strain might undoubtedly be improved greatly.

A rose purporting to be a yellow Mermet was sent out three years ago. Enterprising growers all bit at it and paid a good price for it, but it wouldn't flower and it wasn't yellow and proved an absolute failure. A yellow rose of Mermet type is a thing most desired in the rose world to-day.

Niphetos is very little grown and were it not for its adaptability to certain spots where nothing else will do well, such as low front benches and odd corners, it would be grown still less. It is an exceptionally free rose and if its flowers could be sold it would be a very profitable rose to grow, but the demand for long stiff stems has been a powerful factor against it and the uses to which its flowers can be put are few.

Papa Gontier is another of the "has beens." It is too small for the prevailing taste and its season is too short. It is no good infall and as soon as the weather gets warm in the spring it opens too quickly and is unsalable. Out of the large number of growers who planted Gontier a few years ago there can only be found now a couple or so in each of the large centers.

A rose that has come into popularity and then gone out again within the past decade is the Wm. Francis Bennett. Red roses were more popular ten years ago than at present and the Bennett was hailed as a winner. It was welcomed as a relief from the exacting Jacq growers who had things all their own way on roses of this color up to that time. The Jacq growers watched it with suspicion and looked eagerly for evidences of weakness in it. Weak points soon appeared, for it was found to be a very poor grower. It is one of the freest roses ever produced and will bloom grandly if it can only be induced to make wood, but this it seems to do only in occasional cases.

Another rose that created a furor on its first appearance was Her Majesty. Although belonging in a different class from the other varieties here referred to, yet it may not be out of place to recall the sensation it made nine years ago when it was carried out to the Cincinnati convention, a flower with an eight foot stem which was paraded up and down the hall and came to grief at an inopportune moment by having its head snapped off against a car door. And those who put their money into it never got it back.

The Puritan came very near being a good rose. It would come occasionally a

SECOND TEAM PRIZE.

INDIVIDUAL PRIZE

THIRD TEAM PRIZE.

PRIZES FOR THE BOWLING CONTEST.

magnificent flower and would then charm anybody. But oftener it came green centered and deformed. What a companion for Beauty it would have been had it come regularly as it did occasionally.

In looking over the records of one of the most prominent growers for the New York market ten years ago it is interesting to read the names of the roses then being forced and the prices received. They were the Bon Silene and Safrano, old favorites now dropped completely out of sight; Mme. Joseph Schwartz, the so-called "true tea Jacq" which proved good for nothing for forcing purposes; Cornelia Cook, supplanted by the Bride; Mme. Alex Bernet, too soft and not stem enough; Mme. Robert, productive but with the fatal weak stem; Souv. de la Malmaison, no good for winter bloom; Douglas, a miserable flower; Duke of Connaught, hard to grow and scared out of existence by the Bennett; Souv. d'un Ami, another weak stem; La France, which is rapidly losing ground as a winter rose; Marechal Niel, Jacq, Perle, Niphotos and Mermet. What a havoc the decade has made in this list! Only two or three out of the whole lot can be fairly rated as market varieties to-day, and even these have started on the down grade. Still it is a question whether there is as much money in rose growing now as there was ten years ago.

Two new roses, the Mrs. Whitney, put on the market this year, and the Belle Siebrecht, promised for next year, the first an American, the second a transatlantic production, have their record yet to make. If they prove valuable in various locations and under different conditions the trade will quickly find it out, for there is still plenty of room for the right kind and there are vacancies yet waiting to be filled in the list of "a dozen good teas."

PROGRESS IN CARNATIONS.

Carnation growing in America has received a wonderful impetus within a few years. The few varieties generally cultivated ten years ago have with one or two exceptions been forced to give way to new and better sorts, and the standard of quality has advanced rapidly to a point scarcely dreamed of by either the growers or the consumers of a decade ago.

In those days the main ambition of a carnation grower was to get as many flowers as possible from a plant. That was the first requisite, and every other point was a secondary consideration. There was only a very limited demand for colored carnations, growing in quantity being confined principally to the white varieties, these being picked without stems, and their main use being in the making up of funeral designs. If a bloom chanced to come in with a stem on it, this was often snapped off and a piece of wire substituted.

It was the custom to send carnations to the city stores, not under name but simply as white or colored, short or long. To this rule Grace Wilder was the only notable exception, it being the only variety of its color, and that color a desirable one and on this account expected to realize a better price.

Seedling growing was done in a haphazard way, and with no well defined ideal in view. Of the varieties introduced from 1881 to 1884, Portia and Wilder are the only ones grown now to any amount, although Alegatiere, Andalsia, Fascination, Pres. Garfield, May Queen, and a few others were grown for a while to a sufficient extent to be entitled to be called market varieties. On looking over the shipping lists of a prominent grower for the season of 1884, it appears that Snowdon was at the head of the list in

quantity grown, and DeGraw, LaPurite, Edwardsii, Wilder, Philadelphia and Crimson King constituted the balance of the stock.

From a large number of lists furnished by prominent cut flower growers as their selection of the best dozen carnations now on the market, it appears that Lizzie McGowan is the only variety upon which opinion is unanimous. The only other sorts which come anywhere near to a unanimous vote are Wm. Scott, Day-break, Helen Keller, Mme. Diaz Albertini, Buttercup, Tidal Wave, Silver Spray and Portia. Thos. Cartledge, The Stuart, Bouton d'Or, Crimson Coronet, Ferdinand Mangold, Edna Craig, Uncle John, Puritan, Red Cross, Pomona, Salmon Queen, Mrs. Fisher, Grace Wilder, Anna Webb, Hinze's White and Sweetbrier comprise the balance of the aggregate selection, from which it would seem that with due allowance for varied conditions of soil and location, the catalogue of some four or five hundred varieties of carnations might with advantage be reduced to at least ninety per cent., while to give a list of even a dozen thoroughly tested varieties that fairly meet present requirements is an impossibility.

Quite a number of the varieties above enumerated have not been in cultivation sufficiently long to insure their permanency, and careful judges have learnt from experience that it is wise to go slowly in recommending unreservedly a new carnation. All indications point, however, to the probability that among the novelties disseminated during the past two years, and about to be disseminated the coming season are several that are destined to supersede the whole list of older sorts.

The nearest approach to the ideal carnation in size and stem on the market to-day, is probably Mme. Diaz Albertini. Its

fault from a grower's standpoint is that it does not produce flowers in sufficient quantity in the early part of the winter, being most prolific in the spring months. It is very probable that at no distant day we shall have carnations of all colors, with the stout erect stem, large sized and well formed flowers of Albertini, and constant bloomers. It has been stated in some quarters that the carnation of to-day is no larger in size than it was some few hundred years ago, but it must be borne in mind that the carnations in those days were the border carnations and only produced one crop of flowers a year.

The progress in carnation culture in the past decade has not been confined to the production of better flowers. The improvement in methods of cultivation has been fully equal to the improvement made in the varieties.

Ten years ago we knew practically nothing about the diseases of carnations, and now owing to the efforts of specialists in fungoid diseases we have been brought into close contact with a number of these enemies, which are peculiar to this branch of the *Dianthus* family, some of which, the at one time dreaded rust among the number, we can now successfully combat.

The American Carnation Society has been organized within the past few years, and has been a wonderful help in the development of its patron flower in its different phases, and no doubt we shall be able to chronicle greater improvements in the Divine Flower in the next than has been possible in the past decade.

PROGRESS IN CHRYSANTHEMUMS.

The present popularity of the chrysanthemum dates back to the first set from Japan disseminated by H. Waterer in 1885. Up to that time all the varieties in cultivation had been imported from England and France. The first American seedlings made their appearance in 1887. Of those that ever saw the market, the first were seeded by W. K. Harris. Since that time more has been done in the production and introducing of new varieties of chrysanthemums than in any other line.

Ten years ago chrysanthemum shows were known only in Philadelphia and Boston. No disbudding was practiced, and in single blooms nothing over four inches in diameter was thought of, and the so-called exhibition plants were lank straggling specimens five to six feet tall, with the flowers all on top and most of the foliage in the same place.

The points aimed at in chrysanthemum culture are flowers as nearly spherical in form as possible, with petals neither too coarse nor too fine, of good lasting quality and strong individual self color, erect stem, and good foliage borne close up to the flower.

Not all these qualities are to be found in any one variety. Some sorts have one or several of these good points sufficiently to entitle them to be regarded as standards. For instance the standard of foliage and stem is seen in Mrs. Jerome Jones, but in this variety the petal is too heavy, and the center of the flower not quite full enough. Ivory may be called the standard of form of flower and texture of petal, but it lacks stem. The wiry stem of Widener is largely a matter of growth, and this variety will in the hands of an inexperienced person often come with a weak neck. Lasting quality depends much also upon cultivation.

There is abundant room for advancement still, not only in the direction of more perfect varieties, but in the manner of staging at exhibitions. A recent sug-

gestion by Mr. E. A. Wood regarding the encouragement of efforts in the way of more artistic arrangement is in the right direction, and indicates a means whereby the popularity of chrysanthemum shows may be increased and perpetuated.

We append lists of twenty-five chrysanthemums selected and recommended by two of the leading chrysanthemum authorities in America as worthy to stand at the head of the list of useful commercial varieties, including early and late bloomers.

LIST No. 1.

<p>WHITE.</p> <p>Domlnation, Ivory, Mrs. Jerome Jones, W. G. Newett, The Queen, Nivets, Miss Minnie Wanamaker, Jos. H. White.</p> <p>PINK.</p> <p>Harry Balsley, V. H. PROGRESS IN CANNAS.

In no line of floriculture has a greater or more popular advance been made in recent years than in that of flowering cannas. This race may truthfully be said to have been created within the past decade, it being but four years since the Mme. Crozy was introduced. True, there were such varieties as Gen. Boulanger, Emily Le Clair and others several years before the Crozy made its appearance, but it was the Mme. Crozy that popularized the canna. It proves to have been worthy of the sensation it created, for notwithstanding the multitude of varieties that have followed it this variety undoubtedly stands to-day the best canna for bedding purposes, and in habit and form of flower has yet to be beaten.

The enormous demand from this side of the water which followed the introduction of the Mme. Crozy unfortunately proved too great a temptation for the Frenchmen, and it was not long before scores of highly lauded varieties were hustled into the market heralded as great acquisitions, but proving in the majority of cases unworthy and inferior. This evil became so apparent (our growers having already learned costly lessons in the same direction with roses and chrysanthemums) that our importers have about stopped importing and their hopes are now centered for the future on the results of home efforts, and it is confidently predicted that after the present year we shall have fine American varieties in abundance seeking for recognition, with the probability that, as with chrysanthemums, our enterprising American hybridizers will soon set a pace which our European friends will find difficult to follow.

To form an opinion regarding new cannas one should be with them all summer and take the averages, for in a miscellaneous collection the list of best appearing varieties would change every ten days. The excessively dry weather of the present season has been most unfavorable for cannas. Some sorts that grew eight feet in height last summer are under

the changed conditions this season the veriest dwarfs. Hence it is impossible as yet to present a just estimate of the value of some of the newer varieties, although there are a few which give reason for the belief that they will prove valuable.

Paul Siegrist, which is generally admitted to be the best of last year's importation and which made a most favorable impression at the World's Fair, appears as a very indifferent canna in most places this year. Some growers, however, still pin their faith to it and attribute its failure to the dry weather, feeling confident that it will show up well towards fall.

Next to Mme. Crozy the two cannas most highly esteemed are Alphonse Bouvier and Charles Henderson. They are both exceedingly brilliant in color, the former being ahead in this respect. Bouvier is also the best all round bedder in the market, but is inferior as a pot plant, while Henderson makes the ideal pot plant.

Florence Vaughan is one of the best cannas in existence and stands among the yellows where Chas. Henderson does among the reds. In substance of flower it stands at the head.

Capt. P. de Suzzoni, although coming nearer to a yellow effect than Florence Vaughan, is not equal to that variety, being too tall and uneven in growth.

J. D. Cabos, although a favorite with many and effective on account of its dark foliage, lacks solidity, a plant seldom throwing up more than three or four stalks, which do not stand upright on account of lack of support.

Van den Berg, Jr., is one out this year which looked indifferent early in the season but now appears to better advantage. It is quite distinct in markings, yellow ground work speckled and blotched with red.

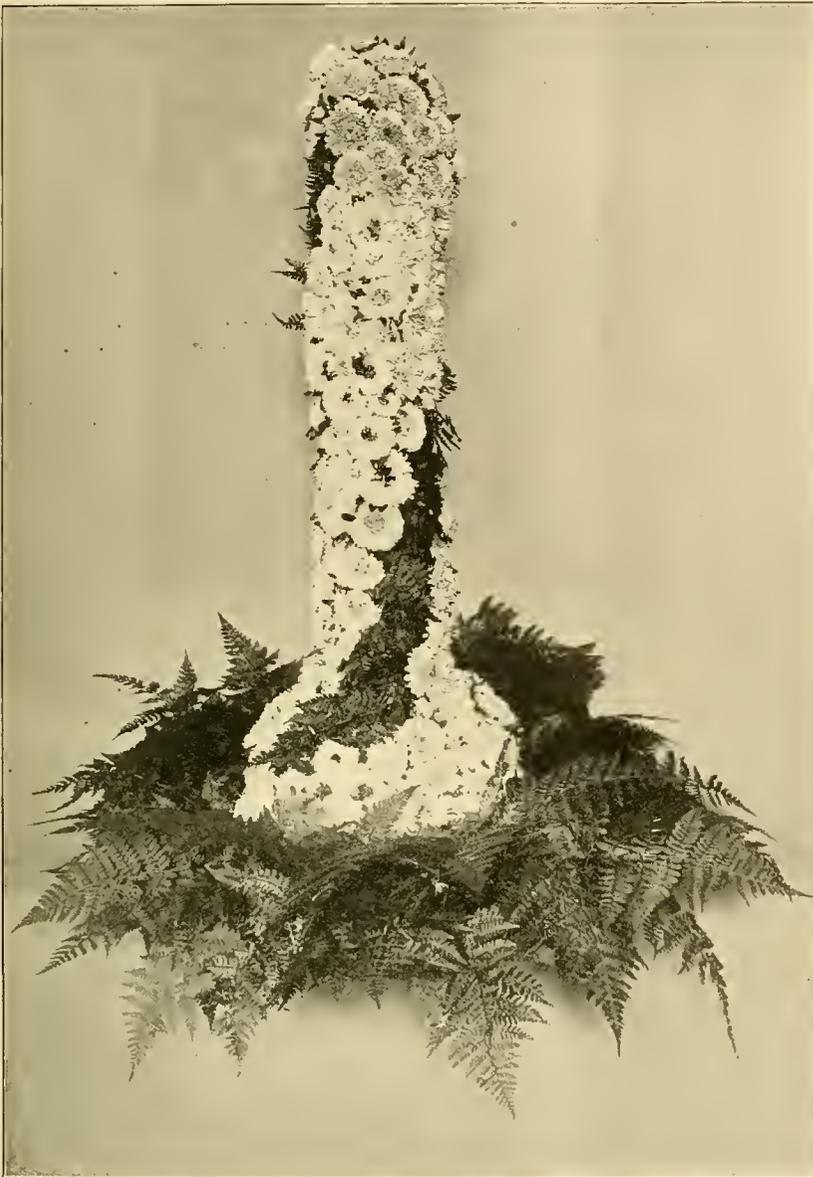

Columbia, a new variety from Kramer & Son, is in some respects, notably size of flower, clearly in advance of all the dark red cannas.

Other varieties which seem entitled to stand in the list of sorts worth growing are Comte Horace de Choiseul, which probably antedated Mme. Crozy, Pres. Carnot, also one of the older varieties, Pres. Chandon, distinct in color and nearest to pure orange, Comte de Bouchard, very similar to Florence Vaughan, the petals being a trifle flatter, Paul Marquant, distinct orange vermillion but rather too loose in the spike, Geoffroy St. Hilaire, grand for large effects, and Egandale, which is the best dark leaved bedding canna yet introduced.

Probably other varieties might be named which in certain locations have given equally good results, but the above fairly covers the various types, and certainly anything which is not equal to those enumerated should be discarded.

Konigin Charlotte, a German variety which will be on the market next year, is expected to prove a good one. Its main advance is in color. Another promising one which comes from Germany is Germania, which is said to be similar to Crozy but a dwarfier grower and larger flower than that variety. The new varieties plainly indicate that hybridizers are working mainly from Mme. Crozy stock. It is a question whether this is the best course.

The principal directions in which improvement is needed are form and substance of bloom. The flowers of existing varieties are too fragile and too easily injured by rain. There is an indication in some seedlings of a better development of the lower half of the flower and occasionally a suggestion of semi-doubleness.

BODYWORK OF BROKEN COLUMN.
ARRANGEMENT OF FLOWERS.

Both of these tendencies are in the right direction. An advance along the same general lines followed in the improvement of the geranium during the past few years would seem to be the right move.

PROGRESS IN GERANIUMS.

The requisites of a first-class bedding geranium are:

1. Suitable habit of growth, viz., dwarf and compact.
2. Ability to stand our hot suns without burning.
3. Large trusses, borne on long stiff footstalks.
4. Clear distinct colors.

The advance made in geraniums the past ten years has been quite marked, but necessarily slow, owing to the high quality of many varieties possessed as far back as 1875 and 1880. The noticeable points of improvement are in habit of growth and increased size of the individual floret.

The following list of ten best all round bedding geraniums, those which come nearest to the ideal, has been given us by

a leading authority on these plants. The varieties enumerated are selected from those that have been thoroughly tested, and not from the newer sorts that have been introduced during the past two years.

TEN MOST DESIRABLE BEDDING GERANIUMS.

Mrs. J. M. Gaar. (Single). Pure white. Dwarf compact growth, abundant in bloom. Equal to any scarlet.

Alpine Beauty. (Double). Pure white, large trusses, vigorous growth. Superior to all other double whites as a bedder.

Beauty of Poitevine. (Semi-double). Salmon pink, dwarf, free blooming. A model bedder.

Leonard Kelway. (Double). After the style of S. A. Nutt, with larger pips and a few shades brighter in color.

Lowell. (Single). A soft rich scarlet, very large truss, symmetrical habit.

Le Contable. (Double). Rosy pink in color, dwarf compact growth. Very free.

Mrs. E. G. Hill. (Semi-double). Rosy

salmon. Very fine bedded. A striking variety.

Centaur. (Double). Soft rose pink. Unsurpassed for bedding.

Bruant. (Semi-double). A strong vigorous grower, admirably adapted for exposed positions.

W. A. Chalfont. (Single). A model in growth, large trusses, A No. 1.

Convention Notes.

RECEPTION COMMITTEE.

The reception committee of the Philadelphia Florists' Club respectfully ask that all delegates as soon as they are comfortably situated in their hotels shall call at the convention hall and register, giving the hotel at which they are stopping. They will at the same time be given the tickets and program of the social part of the convention.

THE LADIES' COMMITTEE.

The ladies' committee are particularly anxious to find out how many ladies there are, so they can provide sufficient cars to carry the party to Carisbrooke Inn, where their reception is to take place. The railroads are very much pushed at this, their busiest season, and asked the committee to give them all the notice they could, as cars were very scarce.

SPECIAL MEETING OF PHILA. CLUB.

At the special meeting held last Tuesday evening the report of the committees showed that a great deal of work had been done and everything is in first-class shape. If the weather man will only favor us all will be well.

THE SHOOTING MATCH.

The committee on shooting match had on exhibition the prizes and they are beauties. The first team prize is a sterling silver loving cup with design representing a seashore scene of sportsmen shooting at birds on the wing, the bottom of cup is washed by waves and a lighthouse is seen in the distance. The second prize is a smaller cup of sterling silver of much the same design as the first, there is no third prize. The teams are to consist of five men each instead of six as at first intended.

There are three individual prizes for the highest scores. The first is a sterling silver flask which seems as necessary as a good gun on an expedition after game. The second prize is a pair of silver mounted opera glasses, and a silver corkscrew with a buckhorn handle is for the third best. The individual scores made in team shooting will have to come in competition with anyone else not on a team who desires to shoot. The committee thought it a pity to debar clubs who have not enough members present to make up a team and they will allow them to shoot as individuals for the individual prizes. The ordinary shooting rules govern in this contest and all persons taking part must be members of some regularly constituted organization of florists, all members of the Society of American Florists. The match will take place on the Iron Pier, which is 1,000 feet long by 50 feet wide, with a large pavilion on the extreme end which is to be used for the entertainment in the evening.

THE BOWLING MATCH.

Of the engravings presented in this issue the single vase is the first team prize, the largest pitcher and tray is the second team prize and the smaller pitcher goes to the team making the third best score. The small cup is of sterling silver and is the individual prize for the highest score in the two games.

The prizes for the individual bowling contest are three diamond scarf pins valued at \$20, \$15 and \$10. They will be useful souvenirs of the occasion.

See page 44 for the rules that will govern the contest.

THE TRADE EXHIBIT.

Superintendent Watson has secured the G. A. R. Hall, opposite the Odd-Fellows' Hall, for an overflow exhibit. The hall is 40x25 feet and he thinks he can now accommodate all comers. See full description under head of "Industrial Progress" in our article entitled "The Progress of a Decade."

Chrysanthemum Notes.

Now comes the beginning of the trying times for the grower of exhibition blooms, for on the plants that were propagated early the first of the crown buds are beginning to form, and to "take" or not to "take" the buds is the question. The difference between crown and terminal buds is already well known to the readers of the FLORIST, for in the very thorough paper read by Mr. Elmer D. Smith on chrysanthemum culture before the Society of American Florists last year at St. Louis, and published in the issue of the FLORIST dated August 10, 1893, these two buds and their capabilities were very fully discussed and illustrated. Our English cousins, who strike the cuttings of some of the varieties as early as November and December, take the buds of a few of them as early as the first week of August, but the last week in August or the first week in September is plenty early enough for us to begin in this country. Some one may ask why; the reason that is generally given is that our autumns are bright and clear and sometimes quite warm, and the wood ripens much more easily and quickly than on the other side of the water. We find in referring to our diary of 1891 the following "Don't take any buds until after August 20," and this is underlined, so that no undue zeal or impatience shall lead us to the taking of buds prior to that date and thereby spoiling the bloom which could have been produced, as we did in many cases that year.

We have used the word "take" or "taking the bud" a great many times, and perhaps it will be necessary to explain this to some of our readers. The expression really means the selecting or leaving the bud and the taking away of the side shoots so that all the strength of the plant will go into the bud which is left. This must be done very carefully and as early in the growth of the bud as possible. In taking the buds we have always rubbed out the shoots with our fingers; some growers use a knife to cut them off with, but in our early efforts at growing the sharp blade would sometimes slip and not only cut off the side growths but the bud itself. The early morning is by far the best time to this, for the succulent growths are then full of sap and very brittle, and if just pushed out from the axil of the leaf by the thumb or finger will break off very easily and without danger of doing damage. The plants

must be looked over every morning after you begin to take the buds, for if the shoots around the crown bud are left, but for a short time, they will have sapped the strength from the bud, so that it will never make a good bloom, and will sometimes wither up and blast. Some growers leave one of the three shoots that always form around the crown bud for a few days, in order to see that the bud is all right and then nip it out, but if the bud looks deformed or does not grow, they rub it (the bud) out and depend upon the terminal bud which will set on the shoot retained. This is simply done, in most cases, as a precautionary measure, and we would advise growers who have had but little experience with crown buds to follow it when the bud is not discovered early, and the shoots have made quite a little growth above it.

Keep the plants well tied up now, so that the stem will be as straight as possible, for crooked stems decrease the value of the flowers, but don't tie so tightly as to choke the plant later on when the bud begins to swell and unfold. Tie very loosely now, for the stem will be fully double as large by the time the bloom is ready to cut. We have seen many a bloom that would have been good, spoiled by too tight tying, for the string cut into the outer bark before being observed by the grower, and when the liquid feeding began the bloom was choked and did not get the full effects of it.

This is the last time we shall have a chance to urge our readers to attend the meeting of the Chrysanthemum Society of America on Wednesday afternoon, August 22, at Atlantic City. We would like to see as large a number of the lovers of the Queen of Autumn as possible. Let us all meet with the one idea in view of making this society second to none of the auxiliary societies of the Society of American Florists, and if you have anything in your mind that you think the society ought to do don't be afraid to stand up and say it, for you will find the officers and members very approachable and willing to do anything that the members want done. So come every one that can, and give us the benefit of your experience, however limited it may be, and acquire all the knowledge that you can in return.

ELIJAH A. WOOD.

West Newton, Mass.

A Few Notes About Orchids.

[Read by Edwin Lonsdale before the Florists' Club of Philadelphia, August 7, 1894.]

When, at the last meeting of the Florists' Club, I requested to be excused for not having prepared a paper to be read on this subject, giving as a reason that I did not have the time necessary, I felt then that I had abundance of time to, at least, make a creditable attempt to do justice to so fascinating and interesting a subject, to-night; but the nearer the time approached for the reading of the paper, the more difficult the task became. However, I must do the best I can, feeble though the attempt will be.

Orchids are slowly but surely taking their place among the popular flowers of the day, as they are being called for more

and more each season. To the leading and progressive florists in this and other cities is the credit largely due for this state of affairs, and the flower loving people are quick to appreciate the intrinsic merits of these aristocrats of the floral world. Cattleyas I believe to be the most popular orchid flower at the present time. Firstly, they have size, a great desideratum in the present status of our chosen profession. In colors, generally, they are pleasing, the forms are unique, and some have a delicate fragrance. And they may be had generally all the year round, that is to say, if the different species are selected with that end in view. Commencing with *C. labiata autumnalis*, which flowers in the fall, then *C. Trianae* and *C. Percivaliana*, both of which flower about the same time, but the flowers of the latter are much smaller, as a rule, than those of the *Trianae*. There is consequently no object that I can see in growing the *Percivaliana*, only perhaps on account of the brighter colors which some of the varieties possess and which may suit some tastes. *C. Mossiae* flowers in May and June, then comes *C. Mendelii*, and *C. Gaskelliana* in the order named, following each other for the summer months. It is understood, of course, that there is only a very limited demand for choice cattleya flowers in summer time, excepting at or near by summer resorts—mountains and seashore.

The cypripedium is perhaps the best orchid for general use; especially does this apply to that best known species, *insigne*, which if rationally handled, blooms at the time of year when it is appreciated and very useful. December is the month in which it is generally in its glory, when it may be kept perfectly until the holidays—Christmas and New Year's. Some horticulturists have been heard to say "that it keeps almost too long." From our standpoint I do not believe that cypripediums can last too long. The complaint among flower buyers is generally the reverse of this. The cypripediums certainly dispel the idea that all flowers are short-lived. This very lasting quality in some orchids endows them with a great mission in horticulture. The long keeping nature of the flowers attract inquiring minds closer to them on account of their great worth in this respect. "How is this?" they will meditate, "the beauties of a rose are faded in one night, whereas this orchid is perfect after it is two weeks old." And the more we can interest the people to think about horticulture, the happier they will be, and horticulture will in that way make friends. *C. Harrisianum* is a hybrid, and I believe the first that was ever raised artificially under cultivation. It is a cross between *C. villosum* and *C. barbatum*, and one of the freest bloomers among all cypripediums. *C. Lawrenceanum* is another good commercial variety, blooming in some instances three times in a year, and rarely failing to produce two crops. There were some doubts expressed by experts as to the advisability of buying this species for cut flowers when first introduced, because as they knowingly expressed themselves, "It blooms at the wrong time of the year." *C. insigne* was looked upon as the standard orchid at that time, and when anything did not bloom at the same time of the year, they shook their heads in doubt. Any orchid which produces its flowers during the months from the latter part of November until June can generally be disposed of, and in my humble opinion, it adds value to a variety if it blooms later in the season than is the natural blooming time of *C. insigne* or *C. Spicerianum*,

BROKEN COLUMN COMPLETED.
ARRANGEMENT OF FLOWERS

and similar types, for thereby is the season prolonged.

The new *Cypripedium Charlesworthii*, from present indications, may prove an acquisition from a grower's standpoint, but whether its coloring and other distinguishing characteristics will prove popular or not, remains to be seen. Very few blooms have been produced so far under cultivation. None to my knowledge in this country, excepting from a plant or so belonging to H. E. Graves, Esq., Orange, N. J., under the fostering care of Robert M. Gray, gardener. I saw a batch not many days ago, which was imported last spring, and several flower scapes were prominent, so that we may reasonably expect to see some of this novelty in bloom within a very short time in this city.

"*Cypripedium niveum*, though hardly a commercial variety for cut flowers, is nevertheless, one of the most delightful of all cypripediums when it is happy and in full flower, its elegant white flowers, sometimes speckled all over with tiny purple spots, being without equal in the

genus. But it is a bad plant to manage in most collections, being more liable to the dreaded orchid disease known as 'spot' than any of its congeners. I am told by a friend who has seen it growing wild in the islands off the Malay Peninsula that it is always found growing on the face of limestone rocks not far from the sea, its roots nestling among the debris formed in little depressions in the rock, and its leaves exposed to full sunshine. It gets completely dried up for a portion of the year, but when the wet season returns it soon recovers and flowers profusely. No doubt we fail with this plant through growing it in the ordinary peat mixture in a moist, shaded house, and keeping it watered all the year round." So says Mr. W. Watson, London, England, in *Garden and Forest*, May 25, of the present year, and I believe that other cypripediums of similar characteristics will be benefited by a similar course of treatment, as indicated.

Some of the species of dendrobiums are also among the useful orchids which may be classed as desirable for cut flowers. D.

nobile is one of the oldest and consequently best known, and though part of the pseudo-bulb has to be cut away to give satisfaction to the flower buyer, the plan of carrying two sets of plants, one to produce flowers this year, and the other the next, makes it less difficult to keep up the necessary supply than it would at first sight appear. The way this species of dendrobium is grown by one celebrated gardener in England whose success with it over there is marvelous, and is a revelation to some of us in America, is worth repeating. I cannot do better, therefore, than to give you word for word what the *London Gardening World* has to say about the way Mr. H. C. Princep grows this species:

"The plant figured is 6 feet 3 inches through, but the largest of the pair measures 8 feet in diameter. This, Mr. Princep informs us, was put into a larger basket 22 inches square, while the one illustrated remains in the same basket as it was shown in two years ago. The one which was put in a larger basket grew away very rapidly, and made growths from 3 feet to 3 feet 6 inches in length, but owing to the house not being large enough for them to be staked in an upright position they were allowed to hang down, with the result that they were not ripened up to the points, and consequently did not flower their full length. The other not being so strong had its growths placed up near the roof, so that they were thoroughly ripened, and flowered right up to their tips, thus showing the advantage of being able to ripen them thoroughly. The plants were kept in a cool house during winter, in which the temperature ranged from 45 to 50 degrees. Most gardeners and florists know the value of this popular old dendrobe, and many grow it remarkably well, but Mr. Princep certainly goes one better with it than any other grower of our acquaintance. He grows it largely in all sizes and in batches, so as to secure a long season of bloom, and cutting down is a sine qua non, for he uses them largely for room decoration, and may literally be said to gather them in sheaves, for he cuts down the stems their whole length and every year, a practice which but a few years ago would have been considered sheer madness, and we opine would be a dangerous experiment even now in the hands of a less skillful plantsman." Mr. Princep is head gardener at Buxted Park, Uckfield, Sussex, and is an old Enville man, and a friend of some of his old associates who are now in this country. We congratulate him on his great success, which is worthy our most ardent emulation.

Well flowered plants in baskets from 6 to 8 inches square would make very desirable Easter gifts, as they would remain in good condition for some time in a comparatively cool room in a dwelling. *D. formosum giganteum* becomes a favorite wherever seen, its beautiful pure white flowers with yellow blotch on lip appeals to every one, but it is doubtful if it is profitable to grow, as so far with us it has degenerated under cultivation. *D. Wardianum* also has many admirers, but under our treatment it has the same fault as the last named, that of depreciating in value the longer it is grown. The comparatively new *D. Phalaenopsis* is an ideal cut flower. It may be cut in generous sprays from well grown plants, and its value to the grower is enhanced by the fact that it may be cut with a sufficiently long stem, without cutting the pseudo-bulb.

Lælia anceps and some of the other species and varieties of *lælia* must not be

forgotten, as they do well in our climate with very little care. Some of our plants last year, that are growing in baskets 8 or 9 inches square, had on them from 10 to 14 spikes of bloom. They do not last quite as long after being cut as some other orchids do, but add variety, and are desirable on that account.

One very important aspect of the orchid subject is the prices at which the flowers are sold. Orchids never should be allowed to become a cheap flower. There is a class of fastidious buyers who do not want flowers when they may be bought cheap. Orchids should be held in reserve for these patrons, and never should be put into the hands of the "fakir" or the "Greek." Some growers, I am afraid, judging from the prices at which they offer their products, are not fully aware of the cost of production, nor do they allow sufficient margin for interest on first cost, and there are some in the retail business, I regret to have to say, who are continually "bearing" the prices of this and every other flower without any real advantage to anyone. The first cost of orchid plants is considerable, and had it been possible for me to have had the remotest idea of what that cost to me would have been by this time, when my first orchid purchase was made, I never would have embarked in the enterprise, with the end in view of growing them for profit.

There is a fascination about orchids which is almost irresistible; especially does this apply to an enthusiastic horticulturist who grows plants and flowers as much for the love of them as for the prospective profits which he may hope to obtain. However, since they have by their own intrinsic worth, assisted by wide-awake florists, made themselves indispensable, let us all pull together to educate ourselves and the people to esteem them at their true value.

And in conclusion, allow me to say that every legitimate effort be made by all of us to draw the people in closer communion with horticulture. When botany is taught systematically in all our schools, public and private, and when the school boy or girl will pause long enough from their play to analyze a flower by the wayside, according to the latest lights in botany, then we may reasonably hope for a cessation of conflicts between capital and labor, and the tendencies towards anarchy be relegated to the past.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

An inquiry before me asks "When should carnations such as Portia, Silver Spray, etc. be topped last?" This will depend somewhat on how you top your carnations. I passed through a patch the other day where a large shears was used to top them with, and all the branches

were cut down close to the plant, and with them of course went plenty of the foliage. Topping them in this way they should not be gone over later than the first of August. I advocated some time back that only those shoots that were showing signs of going into bud should be cut out and even those should not be cut when very low on the plant. If this method has been followed they can be topped the day you plant them in. During August I go over my plants some three times, taking off only those branches that are actually showing buds. It is very hard in carnation culture to say "do this" or "do that," for so much depends on the condition of the plants. Take a very large vigorous plant and it will be better to top it up to the 15th of August, and then when it is planted in cut off the buds. A smaller plant from which you will want to cut some flowers during September and early in October will not want much cutting back.

Some growers do not cut back after the first of August, allowing their plants to get filled with buds before planting in, and they get along fairly well with them, but such plants are very much harder to start off nicely, and do not have the vigor afterward that a plant has which is not required to open flowers and recruit from the transplanting at the same time.

I make it a rule and find it a good one to go over the field ahead of diggers when planting in and trim the plants up a bit, taking out a branch here or there to put the plant into a nice neat shape, and cutting off all buds down to the first shoot next the bud. This does not take up very much time and makes quite a difference in the appearance of the house when planted. After this is done I next take a bunch of stakes and mark all those plants that are under size or that are not wanted inside from any cause. These smaller plants are left to stand until probably the first of October, as they grow very rapidly through September; then if there are any missing in the houses we have fairly good stock to fill in with, and if there is any room left in the houses they are planted where they can be forced a bit and made use of in this manner, or they can be potted up and kept cool until spring, when they will make excellent plants for spring sales where there is trade that calls for them.

It is not a day too soon to commence planting in, and after we get back from the convention we should get to work in earnest, especially if there are a number of houses to plant, for it does not pay to leave them till the last minute and then rush them in carelessly. Where there is only a house or two it is not quite so important to start early, but the plants should all be housed by the 15th of September to get the best results from them.

ALBERT M. HERR.

Arrangement of Flowers.

X.

FUNERAL DESIGNS OF A HIGHER CLASS.

We will now consider funeral designs of a higher grade than those previously treated. These designs need not necessarily be expensive, but such a piece as the broken column shown in our first and second illustrations must of necessity be of some size in order to properly bring out the details of arrangement, and this brings up the cost, even when made, as this one is, of summer flowers, to a figure somewhat higher than the ordinary run.

A column well arranged makes a fine piece, and the design is quite popular

where expense is not so much an object. The larger the design the better the effect, provided the surroundings are in keeping with the size of the design. A 6-foot column is all right for a church or hall, but would be out of place in a small room. On the other hand, as already stated, this design to be effective should be not less than 2 feet in height. The design we show stands about 30 inches high, with a base 12 inches in diameter for the frame. The flowers do not add much to the height when finished, but the base being arranged loosely adds considerably to its size in the finished state.

In mousing up this design we must be particularly careful to have the moss uniformly firm. An inexperienced hand is apt to pack the moss too hard, particularly in the upright shaft, and the base again is apt to be left so loose as not to hold the picks firmly. The stemming of the material for this piece is in no wise different from what has already been treated. The arrangement is, however, somewhat different from those styles illustrated before, as will readily be seen.

The column as seen in the first plate in its incomplete form only shows the arrangement of the solid base work for the shaft and the green in the base. In making up this piece we start with the upright part, first laying on the ferns to serve as background for the garland of loose material to be arranged afterwards. The number of turns to give the garland around the column depends on its height. This being a rather small size it is passed around but once. The ferns are held in position by small wire staples before mentioned. When we have marked out the line the base flowers are inserted first around the sides of the proposed garland, which in width also depends on the size of the piece. In this instance white asters are used for body work, but many other flowers may serve equally well, particularly carnations, which latter are mainly used in winter. The flowers are placed closely together in order to form a smooth and even surface.

For the top of the column, which shows the break, we might use a flower with some shade of color; purple asters were used here, but a number of different things can be used with good effect, such as blue or purple pansies or violets when in season.

This mode of blocking out the design as shown here is not always followed in detail by the various makers up. Many prefer to fill in the entire shaft with body flowers and then arrange the garland or spray over it. This is, however, a waste of material in the groundwork, as the material underneath the garland will be lost.

The material to form the garland should be stemmed in length according to the size of design, but should in all cases stand well above the body flowers. Roses in various tints are effective for this work. These and sweet peas are probably the best at this season of the year. Lily of the valley, if to be had and the price of your piece warrants their use, are excellent, and for a particularly choice piece there is nothing richer than a spray of cattleyas. In the design under consideration we employed Bridesmaid roses with *Adiantum cuneatum*.

The flowers in the base are quite long stemmed, set loosely, and consist of auratum lilies in the left hand corner and Testout roses on the right, with a grouping of white sweet peas and Bride roses between.

The cross which is shown in the third

STANDING CROSS
ARRANGEMENT OF FLOWERS.

plate is treated in a similar way, and the same rules of procedure hold good as in the former.

This piece is designed for front view only and the back is covered with green. This design stands about three feet high. The flowers forming the spray around the cross starting at the base are Blanche Ferry sweet peas with sprays of *Asparagus plumosus*. It is needless to add that the various other varieties can be used equally well. In the base, which is treated loosely, we have a few spikes of gladiolus of a light shade and white cosmos.

LETTERING OF DESIGNS.

While in a general way we deprecate the use of lettering on designs for the reason that nine times out of ten an otherwise handsome piece of work is injured and often simply ruined by these inscrip-

tions, still we will probably never be able to do without it as long as the people demand it. But we should discourage the practice as much as possible and then confine ourselves to the least objectionable forms.

It matters but little what sort of material we use for the formation of letters. If made of natural flowers these will necessarily be so mutilated as to be scarcely recognizable by their best friend. The purple immortelle has been used for the purpose for many years, and is still popular in many localities, although in late years chenille has come into use and is preferred by many. Still there is not much to choose between the two, as both materials form a good legible letter. The letters formed of natural flowers are not very much better as a rule; if the lettering is small there is difficulty in forming the letters so as to make them legible.

In funeral work we have to confine ourselves to a comparatively few varieties of flowers, that is if the lettering is to be done on a white background. Violets in winter and forget-me-nots in summer are among the best. We shall speak of these and others later in connection with some design where this lettering might be employed with propriety. Of course the lettering is not confined to funeral work alone, and for other occasions any color can be used; of this too we shall speak later.

For the present we have confined ourselves to but one illustration, that of a pillow which shows the lettering in script on a background of white carnations. The letters are formed of purple chenille, which is readily bent in any desired form and fastened over the carnations by means of small wire staples. The style of the letters can be changed to suit the fancy, some preferring the block letter and others fancy script or some other form.

A pillow is probably one of the very best designs to admit of lettering without detracting too much from its general appearance, and for that reason it is generally chosen for that purpose. There is little objection to a simple inscription on this design, such as a name or "Rest" or "At Rest," as this takes up but a small amount of space and allows ample room for displaying flowers to give a loose effect.

The arrangement of a pillow differs in no material point from that of any other design already considered. The blocking off of the form with a solid mass of body material, the same as forms the surface for the lettering, and then festooning over that, as practiced some years ago, is not much resorted to at the present day, where generally the material is arranged loosely, surrounding the space for the lettering on a background of hardy ferns as shown in our illustration. An engraving of the finished design is also presented in this issue.

The material employed consists of sweet peas, lavender in the right hand upper corner and white in the lower left; and Bride roses in the upper left and Mermets in the lower right, with a few auratum lilies beneath the lettering, the whole being interspersed with adiantum.

Miscellaneous Seasonable Hints.

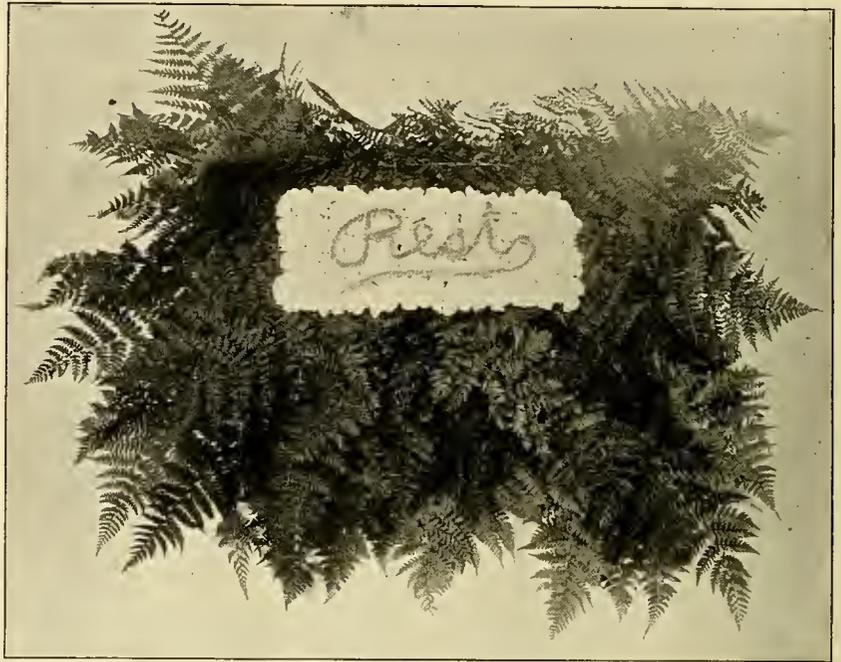

For this latitude the middle of August is time enough and to spare for sowing pansy seed for your spring sales. An eminent grower, perhaps the best on this continent, has been kind enough to disseminate to all his friends and patrons the plan pursued by a renowned French grower. With all due respect to our friend in Massachusetts, I entirely disagree with the advice of the Frenchman. I have seen the plan tried by careful people this summer with very poor results. It is risky, to say the least, and there is no need of experiments. What the French, German or English do in such matters is no criterion to us; they can delegate a professor on pansies to examine the state of the seed bed three times a day, but we cannot. I have invariably got up all the seed I sowed by sowing in drills in an ordinary frame. The drills are certainly slower than broadcast sowing, but what is \$2 worth of labor when the seed costs \$10 per ounce? Place a 2x4 scantling on edge at the back and front of the frame, and on those place heavily shaded sash. By this plan there is a current of air passing over the surface of the bed at all times. When the seeds have germin-

ated and are showing their first pair of leaves (cotyledons) you can spread the sash, and on dull and cloudy days remove entirely. As the season advances it will be more congenial to the violet tribe, and two weeks after they show above ground the sash can be removed entirely. If the weather is very hot and dry in September, red spider is often troublesome to the young seedlings; a constant watchfulness against dryness and a horizontal syringing will keep this pest down.

Now, right now, but no time lost, is the time to propagate the show pelargoniums. Suppose you have the plants that were unsold in April and May, and you have kept them growing as you should, they will have now made a good growth, but be entirely out of flower. Cut them down to within two eyes of last year's growth; don't be afraid, you can scarcely cut them down too severely. The leading growth will perhaps root the sooner and make the ideal plant, but the cutting below that will make a good plant. It is much the safest to put the cuttings in sand and keep moderately moist. That is, they don't want to be saturated as a "mum" cutting does at this time of year, neither do they want to be allowed to get very dry. Too heavy a shade is not good for them. The old plants, unlike the zonal pelargoniums, our common geraniums, are of the greatest value to you. After they have been cut down stand them on the bench and let them get dust dry, or only give them sufficient watering to keep them from shriveling up. In a couple of weeks they will show signs of budding, and after they have made a slight growth, say half an inch or so from the old stem, then shake them out, leaving not a particle of the old ground on them. Pot them firmly back in a *smaller* pot than they flowered in, treat carefully for a few weeks, and you have the start of a fine plant. Although the so-called pelargonium is just as much a geranium as the common General Grant its cultivation is entirely different.

There is a good deal of violet literature going the rounds just now, and perhaps those who are getting the best results are saying little. The advice I give is so sincere that it is what I do myself and have seen others do who are invariably successful with this capricious crop. If you have any good looking plants in the field, small but healthy, or better, if you have any in 2 or 3-inch pots that you have kept in a shady place up to date, plant them at once in the house they are to flower in. My experience is that the so-called violet disease (and it is a disease) makes its appearance in the early part of September, when the dews are heavy and the sun is bright. Why it should make its appearance at that time, I don't pretend to explain scientifically. There are some peculiar soils, and perhaps situations where this trouble may not arise, but it is safest to have them housed at once. The old theory that violets wanted sunlight is utterly exploded. Some of the best violets that were ever grown, were grown last year in houses at the rear of rose houses, where no direct ray of sunlight ever touched them from November until March. Some might say it is warm for violets now under glass; remember that a heavily shaded house with plenty of ventilation is actually cooler than it is outside, fully exposed to the sun, much cooler. Put on plenty of shade and keep well syringed.

Now is the time to propagate your stock of alternanthera. Carpet bedding has received a set back this past year or

PILLOW WITH LETTERING IN POSITION

ARRANGEMENT OF FLOWERS

two, but these brilliant little tropicals will never go out of fashion. Get some flats of convenient size, say 2 inches deep, have 1 inch of soil and 1 inch of sand on top, put the cuttings in thick and keep watered in a shady house. In a few weeks they will be well rooted, and long before cold weather will be stocky little plants, able to endure rough treatment during winter. This advice is particularly to be followed with the variety more difficult to grow and most valuable of all, paronychioides major, the bright scarlet.

Although somewhat foreign to the florist business, I know many of you are asked to do a little "landscaping" in a small way, and perhaps you are not all aware that there is no better time in the whole year to sow grass seed for a lawn than the end of August or very early in September. There is no doubt this is the best and surest time of all to sow for a lawn.

While outside of our legitimate order of business, let me say that you are asked very often to supply some so-called evergreens (properly conifers) for your customers. You can transplant them *now* or any where before the middle of September with perfect safety. If done during this time there is no risk; if not convenient to plant by that time, leave it alone until next May or June. Evergreens, unlike deciduous trees, want to be planted when their roots are active.

It seems like telling a florist to keep good habits to say paint, but oh, don't spare paint brush and pot if you intend to continue in the business. One great advantage of the butted glass and cap is that outside painting is entirely dispensed with, except for appearance sake, but with the old fashioned lapped glass you must paint to keep the water out, annually if possible, and a coat of paint inside makes, as far as the health of the plants is concerned, a new house.

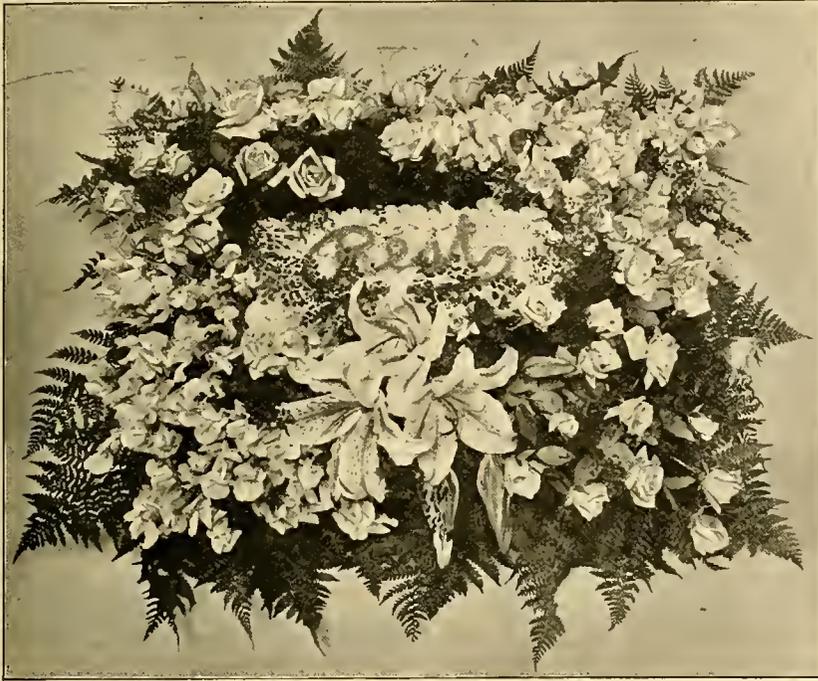

WM. SCOTT.

Palms in Summer.

This class of plants suffers more from inattention in summer than anything else that is grown, and principally from lack of water. The palms are gross feeding plants, and when in growth like plenty of water. I would much sooner see a rose or chrysanthemum flagging from drouth than see a palm get dust dry at any time. These plants do not show the evil effects of dryness at once, they give evidence afterwards by the weakness of the young leaves, by the foliage turning a sickly yellowish green, or by the tips of the pinnae turning brown or dying.

While I do not believe in overpotting palms if proper attention is paid to the watering they will do in much smaller pots than many put them in. If badly potbound shift, if not give a stimulant in the shape of weak manure water. Some of the palms, especially the phoenix, will get so root-bound as to raise the balls above the rim of the pots, and to keep them down requires a pot out of all proportion to the size of the plant. With these it is a good plan to stand the pot in a saucer, or to plunge the pots in sand or ashes to keep them from drying out. With arecas if allowed to get too dry they turn yellow and get an attack of red spider; the only cure for this is moisture at the roots and foliage. If it is a bad attack of this pest mix whale oil soap, sulphur and water and give the plants a good syringing with it. Let it stay on the foliage twenty-four hours and then syringe off with clean water; one application will generally effect a cure.

Kentias, seaforthias and cocos are liable to thrips from the same conditions, and can be cured by careful fumigation and liberal syringings afterward. Palm houses should be shaded at this time of year, but not as heavily as many growers consider necessary; if proper attention is paid to watering they do not need as much shade as is oftentimes given them. The more air and light they get the more

PILLOW COMPLETED.
ARRANGEMENT OF FLOWERS

hard knocks they will stand when used for decorating. They should be syringed morning and evening, and watered when dry.

The finest palms I ever had were grown out of doors in summer; when shifted in June they were put outside under the shade of trees, and at the north side of some large buildings, where they were well shaded. I plunged them to the rim of the pots in coal ashes, and unless it rained they got a good syringing with the hose every day. The growth that they made was surprising, and the color of the foliage was perfect. The plants were clean, not an insect of any kind on them, and so hard that they stood the winter's work much better than those carried over in the houses. Palms are easily taken care of and easily grown, and with very little attention make good plants; in fact they are as easily grown as a geranium and are much less trouble than a house of roses. To grow them well all you need is good drainage in the pots, plenty of water at the roots, good syringing to keep the foliage clean, and if you get scale on the foliage clean it off with sponging, but if your plants are healthy and kept so you have no trouble keeping them clean. JAS. S. TAPLIN.
Hackensack, N. J.

New York.

A spirit of discontent broods over that portion of this community whose business it is to raise roses for the cut flower market, likewise that portion whose unhappy lot it is to find customers for this stock in this dullest of dull seasons. No one can find fault with a man for feeling dejected when he sees his invoices come back with returns thereon which scarce pay for the express charges, but equally deserving of sympathy is the commission dealer who finds himself on a Saturday afternoon, after every store has closed and everybody who can afford it has gone out of town, with an express wagon

load of roses heaped in upon him and the responsibility of turning it into money placed on his shoulders?

The fact is, and it has been alluded to before in these columns, that there is entirely too much stock grown for the mid-summer demand. If it could be reduced by eighty or ninety per cent, the result would be a fair price for good material.

Another discouraging feature of the situation is the quality of the stock and the unaccountable and worse than useless attempt of some growers to make use of winter expedients in summer trade. Think of it. Five and six grades of American Beauty on the invoices, all carefully counted and measured, and the buds rated as second and medium grades would not compare in size or finish with a decent Gontier or Bon Silene. Just such stock is coming in by thousands daily, and what can be done with it? The stores don't want it, the Greeks turn it over and over until it is nearly worn out before they will decide to touch it; there it is, you can't eat it; to what use can it be put? And so it comes that American Beauty is sold as low as fifty cents a hundred.

Still, a limited number of really fine specimen blooms, and the number available is very limited, will sell for \$15 per hundred. Every store can use a few of such daily. Roses of the more ordinary varieties go very slow, pink seeming to be for the time a most unpopular color. Among white roses Kaiserin Augusta Victoria seems to be a favorite; it is coming in in good shape, and its delicious perfume will carry it anywhere.

Sweet peas and asters, which have been trying apparently to monopolize the "glut" department have been obliged to accept the company of the auratum lily, which now goes begging at \$1.50 a 100. Over at Burns & Raynor's the walls and benches are being painted up and renovated generally, and it is an even struggle between the paint and several hundred auratums as to which will smell the

strongest. More or less cleaning up, painting and varnishing is going on generally, and the safest place for a visitor is a standing position in the middle of the floor. Any attempt to lean up against wall or post or to sit down on bench or table is apt to be rudely frustrated by a vigorous chorus "look out for paint."

Reports from various watering places are not very encouraging. These resorts are well filled up, but the people are not buying flowers, and the hotel landlords are getting what money is being circulated.

The absentees are beginning to return. Chas. Schwake got home on August 2 and W. H. Siebrecht on August 8. These two gentlemen started off together and visited about half the European countries, enjoying themselves hugely. Winfried Rolker returned on steamer Columbia, Friday, August 10.

On Thursday, August 9, the residence of Herman Rolker, corner Ocean avenue and Lincoln Road, Flatbush, was damaged by fire. The flames were fortunately confined to the garret and roof, but furniture suffered considerably from the combined effects of water and the energetic efforts of Flatbush neighbors to save it by dumping it out of the windows.

Warendorf is making extensive improvements in his store and when completed he will have one of the finest florist's windows on Broadway.

There is some talk in the air of a market at the foot of West 14th street to rival the 34th street institution, but it is not likely to come to anything.

The New York *Tribune* in a recent issue gave a very interesting and truthful description of the lily ponds of Wm. Tricker & Co. at Clifton.

The regular monthly meeting of the New York Florists' Club was held on Monday evening, August 13th. The meeting was a large one and very earnest and harmonious. The various amendments to the by-laws proposed by the committee which has had that duty in charge were all adopted without dissent and the committee thanked and discharged.

The transportation committee reported that a special train would convey the New York delegation to Atlantic City, leaving New York via the Philadelphia & Reading Railroad at about 10:30 o'clock Monday morning, August 20, and the delegations from New England and other northern points are expected to join the New York party. Stops will be made at Elizabethport and Red Bank, N. J., to take on those wishing to join at those points. Badges for members will be ready at Liberty Street Ferry before departure of train.

The executive committee had been working on the matter of holding a fall exhibition and reported progress, a full report of details to be ready for next meeting. It is proposed to hold the exhibition on a somewhat limited plan, with premiums confined to the medals and certificates of the club.

A communication from the Philadelphia Club asking that New York be represented at Atlantic City by a shooting team was received, but it is doubtful if such an arrangement can be made owing to lack of time.

It being announced that a plan was on foot to nominate Edwin Lonsdale, of Philadelphia, for the next president of the National Society, a motion was unanimously carried pledging the full support of the New York members for that very popular gentleman.

Mr. J. A. Evans, of the Quaker City

Machine Works, Richmond, Ind., was present and in response to a call made a few pleasant remarks. Another pleasing episode was the offering of expressions of congratulation by Mr. Morris to Treasurer Weathered on the recent happy event in Mr. Weathered's family. There was unanimous approval expressed regarding Mr. Morris' remarks and Mr. Charlie responded in cordial appreciation.

Philadelphia.

Robert Craig has been trying an experiment with crotons in pots. They are in a frame outside, plunged in old hops, and are looking very fine. While they do not grow as rapidly as in the house under glass, the growth made is sturdy and the plants have a more stocky appearance. They were taken from the house to the frame into the direct sunlight and never shaded. Mr. Craig says he thinks they will make fine plants for house decoration. Everything about his place is in apple pie order, several beds of choice varieties of cannas being a mass of bloom. He has erected a large slat house, which is filled with cycas, araucarias, aspidistras and like plants. This makes a useful annex and gives room to spread out the palms in the houses. Mr. Craig thinks this shelter will make a good place in which to winter roses.

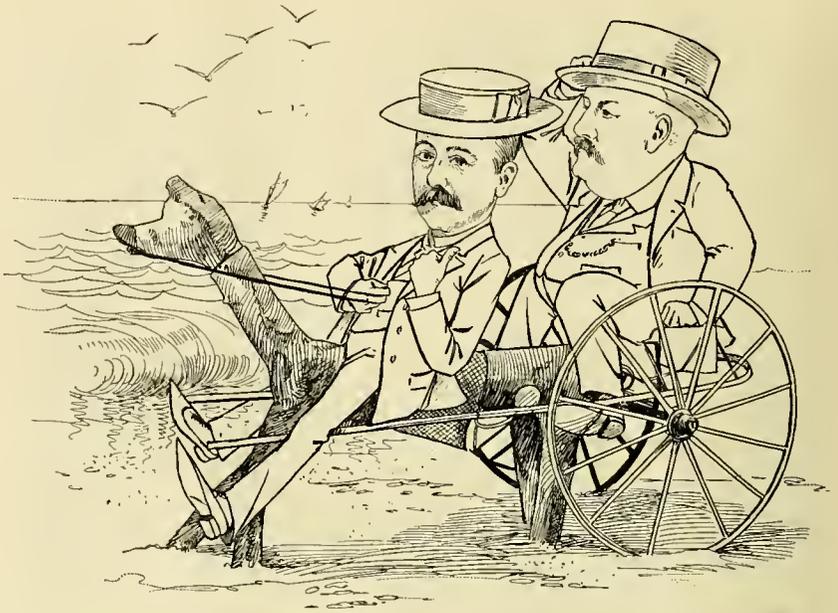

There is not much to say about business at this time, it is of the regulation summer sort, quite a lot to do one day and nothing the next.

Thomas Fould's Brides and Mermets are a revelation; nothing like them has been seen at this season before, fine large buds, long stems and good foliage about describes them except the color of the Mermets, which is equal almost to that usually seen in the winter. They are from two year old plants. It would seem as if the market would take a few more Meteors; they are scarce and any demand worth the name compels the dealer to send to New York. Asters are now fine and sell fairly well; \$1 per hundred is asked for the best. With the exception of short whites, carnations are very poor; \$1 is the outside price.

It is now such a short time to the convention that every one is full of it, and a visitor to Phila. next week will find very few of the craft about, just enough to attend to the watering and see that the places don't get away.

The entertainment committee paid a visit to Atlantic City Saturday last, and on returning announced everything to be in good shape. One of the A. C. papers announced that the S. A. F. would be there August 21st eight thousand strong. We don't know what the Phila. boys have been doing to give any one such an impression as this, probably a reporter has been talking to Superintendent Watson, and he has been telling them about his entries of exhibits. He is in a peck of trouble, having a week ago enough entries to fill every foot of floor, table and wall space, and at the rate they are still coming every mail he will need another just such hall. George is a great manipulator, and he may be able to find room enough and space to please everybody, but he has his hands full. There will be many more exhibits here than at any previous convention, which shows that the trade are alive to the benefits that may be derived from such a representative gathering as attend the conventions of the S. A. F.

An interesting place to visit will be the lighthouse, which is situated right in the

COLONEL DAN TAKES SIR JOHN FOR A SPIN BEHIND HIS "FAST" NAG.

city. It is built of brick with a winding iron staircase inside up to the top, reminding one of the Washington monument on a small scale. Its view from the top is a grand one, and well worth the exertion it takes to get there. The building is open to the public from 9 to 12 a. m.

At the trial shoot captained by John Burton near his place at Chestnut Hill, some great scores were made. Mr. Farson tried for some larger game than blue rocks, and Mr. Battles had quite some trouble with his new fangled iron; it is up to date in every respect, but being new to him, it was a little bit too fast; he will be up with it by the next practice. All had a good time and were well pleased with their trip.

The transportation committee have made arrangements with the Pennsylvania road to take the Phila. Club to Atlantic City on special train. They will leave Monday afternoon at 3 p. m. There is no reduction in the fare, which will be \$1.75 for the round trip ticket good for ten days.

LaRoche and Stahl have made a proposition to their creditors to pay their debt of \$60,435.37 with \$2,152.25, a pro rata of about 3½ per cent. The creditors do not take kindly to this offer, as it is reported that some claims have already been paid in full with stock which was supposed to have been sold for the benefit of all creditors. K.

Chicago.

See page 56 in this issue, under head of "Chicago to Atlantic City," notice of change in transportation arrangements to the convention.

The market showed a slight improvement last week, mostly of a local nature. Shipping demand remains very slow, however, and little trade is done in this direction.

The quality of stock is much improved all along the line. Beauties are coming in once more with fairly long stems; the best selected stock bring \$1.50 a dozen, the bulk of the stock, however, goes at \$1 for fair, and the short of course at less.

Testouts are fairly good, but in warm weather this rose is not the very best keeper. Bridesmaid is in good demand, while Mermet finds few buyers. Kaiserin has the call over the Bride, mainly on account of foliage, as in size of blooms there is little difference between the two. Some real good Duches are coming in which, on account probably of the indifferent quality of La France, is meeting with good demand. The average quality of La France, by the way, hasn't been so poor for years as at present, though a light improvement may be noted. In red roses Meteor of course stands at the head. The quality, however, though fair leaves much to be desired. Perles are fair with small demand.

The rainfall last week was but slight, but small favors are thankfully received. All outdoor stock was much benefited for a time at least, though a day or two of warm weather will take out of the ground the little moisture that has fallen.

Carnations show a marked improvement. The demand also is a little more steady. Asters are coming in with a rush. The stock is fairly good but the demand is not equal to the supply; best quality sells at 50 cents a 100, but the bulk brings much less. In lilies we still note a few scattering longiflorums. There are plenty of auratum, which go slow at 75 cents to \$1 a dozen; roseum and rubrum at 60 cents.

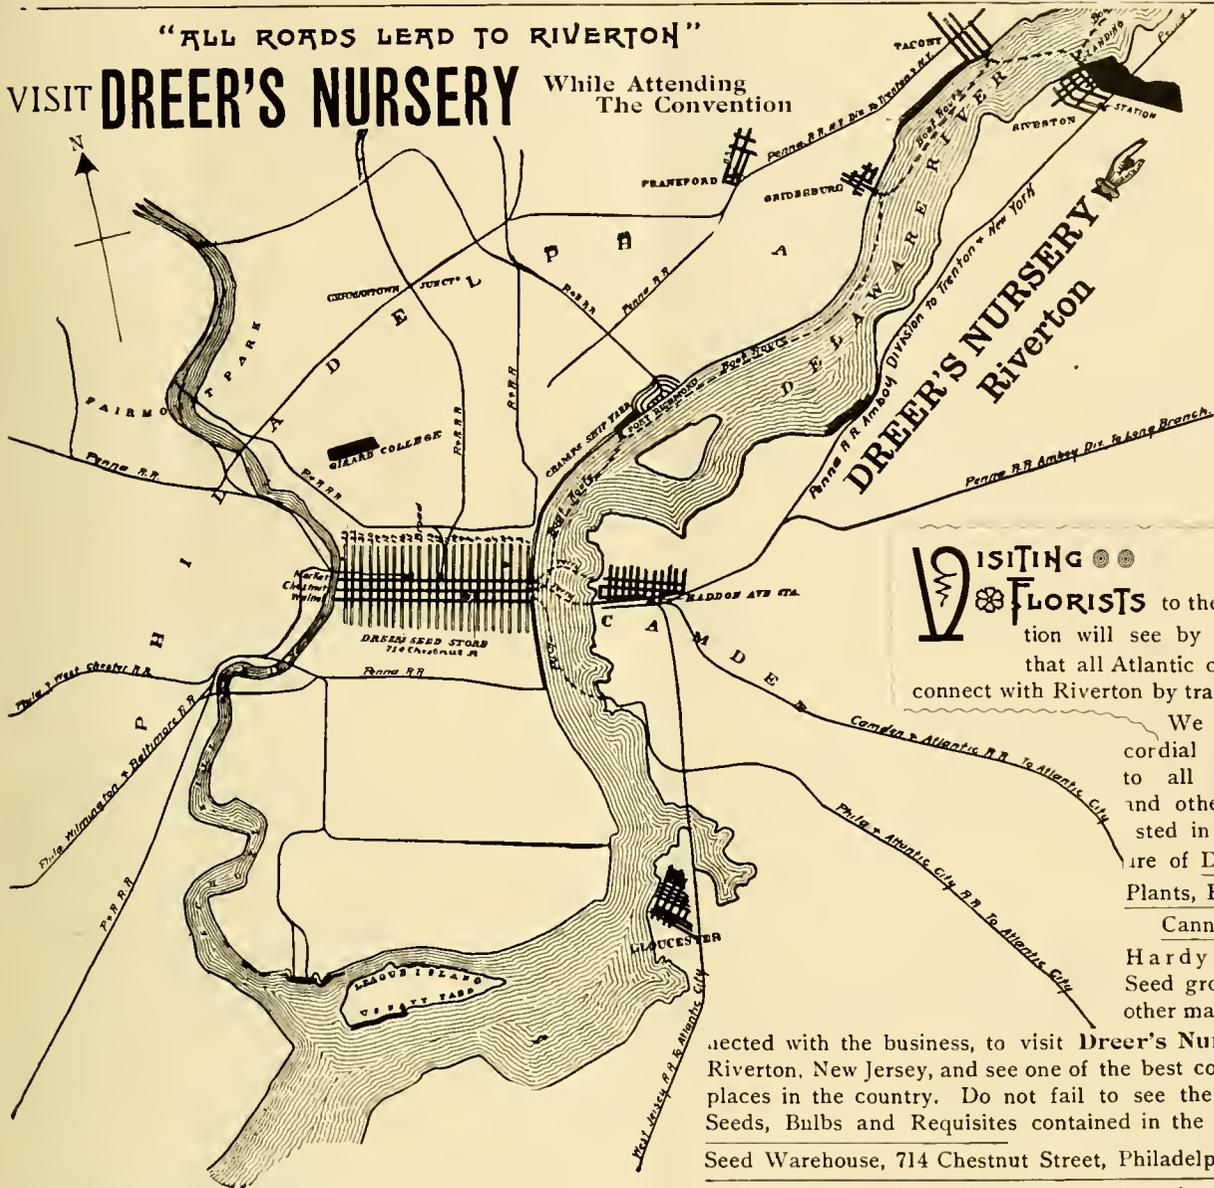

Sweet peas have taken a new lease of life; some really fine flowers are sent in; these are quoted at 15 cents a 100 for the best quality; in large lots, however, they may be had at from 50 cents to \$1 a 1000.

The boys are waking up to the fact that the chrysanthemum show is not so far distant. There is an unusual interest taken this year as regards the Queen of Autumn. Quite a number of growers who have never before attempted to grow this flower by the most approved methods are taking a hand this year, and the coming contest bids fair to become extremely interesting. We have visited quite a number of establishments recently and in the majority of places we find the plants in very fine condition. The amount of

[CONCLUDED ON PAGE 42.]

"ALL ROADS LEAD TO RIVERTON"

VISIT **DREER'S NURSERY** While Attending The Convention

VISITING **F**ORLISTS to the Convention will see by this map that all Atlantic city trains connect with Riverton by train or boat

We extend a cordial invitation to all delegates and others interested in the culture of Decorative Plants, Ferns,

Cannas, Bulbs, Hardy Plants, Seed growing and other matters connected

with the business, to visit **Dreer's Nursery**, at Riverton, New Jersey, and see one of the best commercial places in the country. Do not fail to see the stock of Seeds, Bulbs and Requisites contained in the four-story Seed Warehouse, 714 Chestnut Street, Philadelphia. We

are sure we can interest you in both places and make your call instructive and profitable. So much may be written about a place that leaves a disappointment in the memory of the visitor, after seeing it, that we are anxious to have our friends judge for themselves.

Have your mail or packages sent to our care. Our representatives will be in attendance at our display in Morris Guards Army, Atlantic City, during the Convention, to give all information regarding a visit to our establishments.

Those who prefer may stop over in Riverton or Philadelphia going or coming, as best suits their convenience. For example:—Western and Southern Florists in passing through Philadelphia and arriving before 1.40 p. m. may take a train or boat, visit the Nursery and return in time to take a train after 4.00 o'clock for Atlantic City, arriving in time for supper. Northern and eastern Florists should buy their tickets via Philadelphia, stop over at Riverton on the way down (see New York time table), then take an afternoon train to Atlantic City.

Time tables given herewith.

plants grown to single stem is at least double that of last year. We are pleased to note that the old hap-hazard, go-as-you-please way of growing the plants has been discarded by most of our growers, and the result will doubtless prove to be a much better quality of bloom this fall.

At the last meeting of the Florist Club Messrs. J. B. Deamud, A. G. Prince and Walter Kreitling were appointed a committee to formulate a plan for a summer outing of the club. The affair will probably take the form of an excursion to some nearby point, at which features will be a bowling match, shooting match, base ball game, etc. The ladies are to be included and it is the intention to make the affair a reunion of the members of the club and their families.

R. C. Lange is preparing to build two houses, each 18x100, on Humboldt Ave. His address will be Station G, Chicago.

FOR SALE—Residence and 28 acres of good land, near Lakewood, 1 mile from town of 5,000 inhabitants, within easy access of Philadelphia and New York; well suited for a florist's business; no opposition. Address OWNER, box 103, Tooms River, N. J.

FOR SALE—On account of sickness, greenhouses of 3500 feet of glass, heated by steam; all in good condition. Also dwelling house and ground. Good retail cut flower and bedding plant trade. 600 inhabitants; no other florist; three minutes to railroad station; thirty minutes to Broad street station, Philadelphia; 34 trains daily. Or, will sell greenhouses and give a lease on dwelling house and ground. Only those meaning business need to apply for particulars. Address ROBERT CRAIG, 49th and Market Sts., Phila., Pa.

FOR SALE—A first-class florist establishment that has netted 30 per cent on the price asked for the place, and is still growing, can be made to pay twice that much; on account of poor health was unable to grow a sufficient stock to supply the demand. No opposition. In a wealthy and growing college city with over 6,000 inhabitants, in central Missouri. Greenhouses and everything new, with land 124 by 240 feet near the public square. Price only \$4,800 if sold in the next ninety days. For more particulars write at once to E. H. MICHEL, Magnolia and Tower Grove Aves., St. Louis, Mo.

FOR SALE.

Greenhouse plant 7 miles from center of Chicago in one of its finest suburbs; 3 houses 56x11, one 120x20. Hot water; established all-round retail trade; good winter stock. Long house and ground lease, or will sell entire. A great bargain. Address BOX 10, care American Florist.

FOR SALE OR RENT.

Two large greenhouses 100 feet long by 18 feet wide, containing 5000 feet of glass; built two years ago, with all modern improvements, by the late John F. Nitterhouse, practical florist. Greenhouses situated 1/2 mile from town; convenient to two railroads, and stocked with roses, carnations, etc. Possession given Oct. 1st. For further particulars address MRS. S. J. NITTERHOUSE, Waynesboro, Franklin Co., Pa.

For Sale or Rent.

One of the largest and most successful plants in the State of Ohio, consisting of about 50,000 feet of glass, with three or six acres of fine land; houses all in the best of order, and as good as new; adapted to cut flowers. Reasons for selling, the increasing demand for the Standard Ventilating Machines demands more of my time than I can possibly give it and run the florist business. For particulars address E. HIPPARD, Youngstown, Ohio.

FOR SALE.

Six (6) greenhouses, two hot water boilers, about 2000 feet 2-inch wrought iron pipe, valves, etc., lot of hotbed sash, frames, benches and about 35,000 flower pots. The entire plant will be sold at a very low cash price, as the whole must be removed off the premises before Sept. 1st. For particulars address L. R. MUNN, Station C, Brooklyn, N. Y.

FOR SALE.

A VALUABLE 28-ACRE FARM, WITH GREENHOUSE AND LARGE AND PROFITABLE TRADE ESTABLISHED.

The residence of the late Mr. E. G. Bridge, delightfully situated on Washington St., in the city of Woburn. The buildings consist of a small two-story house of 6 rooms, with shed and storeroom connected; house is painted, blinded and in perfect order, supplied with city water; good barn, with cellar, bennery, ice house, shed and silo buildings.

FIRST-CLASS MODERN STYLE GREENHOUSE.

125x20 feet, built in the most approved style, with large boiler and hot water connections, and the foundations ready for another large house.

The grounds are stocked with 5,000 of the choicest kinds of Pinks. Also Asters, Roses, Shrubs and Hardy Plants (for which there is large orders for future delivery), and the trade can be doubled in one year. The land is beautifully situated, commanding a large street frontage, suitable for building lots, and has fruits of all kinds, shade trees, and Electric Line to pass the property; a large amount of choice white "Pinks" are being sold every day.

OVER \$3600 HAVE BEEN EXPENDED ON THE greenhouses and plants in order to make it the leading place of its class in the county.

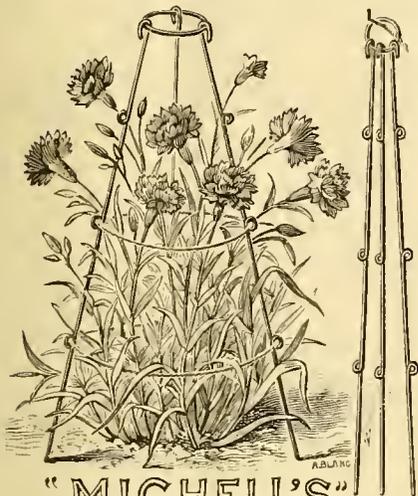

Owing to the sudden death of the late owner, we offer this entire property for \$6,000.

J. L. NASON & CO.,

21 School St., BOSTON, MASS.

FOR SALE.

Wholesale and retail ornamental nursery and greenhouses, in the best residence city of Southern California. Fine business location and complete stock, fixtures, etc. A rare opening for the right man with moderate capital. For particulars address "CALIFORNIA," care Am. Florist.

Please mention the AMERICAN FLORIST every time you write to an advertiser.

BOWLING RULES WHICH WILL GOVERN THE TOURNAMENT AT ATLANTIC CITY.

1—The game adopted to be played by clubs in this tournament shall be what is known as the American Ten Frame Game.

2—There shall be a line drawn across the alleys fifty feet from the head or front pin.

3—Any wooden ball may be used that does not exceed twenty-seven inches in circumference.

4—The game shall consist of ten frames when, should the number of points be equal, the play shall be continued until a majority of points upon an equal number of frames shall be attained, which shall conclude the game. All strikes and spares made in the tenth frame shall be completed before leaving the alley and on same alley as made.

5—Players must play in regular rotation, and after the first inning no changes can be made, except with the consent of the Captains.

6—Players are to roll but a frame at a time, and to change alleys every frame.

7—The Umpires shall take great care that the regulations respecting the balls, alleys and all rules of the game are strictly observed. They will be the judges of fair and unfair play, and shall determine all disputes and differences which may occur during the game. They shall take special care to declare all foul balls immediately upon their occurrence, unmasked, in a distinct and audible voice.

8—Umpires shall be selected by the Captains of the respective clubs, and they shall perform all the duties in Rule 7, except recording the games, which shall be done by scorers, one of whom shall be appointed by each of the contending clubs.

9—No persons except the Captains shall be permitted to approach or speak with the Umpires, Scorers or players during the progress of the game, unless by special request of the Umpires.

10—A player must not step on or over the line in delivering the ball, nor after it has been delivered, until it leaves the alley. Any ball so delivered shall be deemed "foul," and the pins (if any made on such ball) shall be placed in the same positions as they were before the ball was rolled. It is also considered a foul ball if any part of the person should touch any part of the alley beyond the line before the ball leaves the alley. All foul balls shall count as balls rolled.

11—Should any ball delivered leave the alley before reaching the pins, or any ball rebound from the back cushion, the pins, if any, made on such balls shall not count, but must be placed in same position as they were before the ball was rolled. All such balls to count as balls rolled.

12—Persons to act as Judges shall be chosen, one by each Captain, who shall take their positions at the head of the alleys and see that the pins are properly set up, and that no one interferes with them in any way until the player is through rolling. They will immediately report to the Captains any irregularities that they may notice during the progress of the game.

13—The dead wood must be removed from the alley after each ball. Should a pin be displaced from the perpendicular and in such position that it falls on the removal of the dead wood it is to be counted as down.

14—Sufficient space shall be allotted to the participants in the game, to which none but members of the teams shall be admitted.

ST. JOHNSBURY, VT.—A greenhouse 100 x40 feet is being erected here for Mr. T. N. Vail.

NEWBURYPORT, MASS.—J. J. Comley announces that he will give a large chrysanthemum show in this city the coming fall.

BAR HARBOR, ME.—F. H. Moses has taken the large store adjoining that occupied by him and is having the two thrown into one which will be the finest establishment east of Boston when completed.

SUPREME COURT

—OF—

FLORICULTURE.

Filed this 20th day of August, A. D. 1894, at 49 West 28th Street, city, county, and State of New York.

SUBPOENA.

COUNTY OF NEW YORK SS:

State of New York.

You and each of you are hereby commanded to appear in person before

✻ BURNS ✻ & ✻ RAYNOR ✻

at 49 WEST 28th STREET, in said city, county, and State of New York, on or after the 20th day of August, A. D. 1894, between the hours of 8 a. m. and 6 p. m., to testify to the truth of their claim to be the

Leading Wholesale Florists

of the United States, quantity and quality considered, and there and then to place your orders for future shipments, or arrange for consignments to the parties aforesaid, and this you are in no wise to omit under no less a penalty than that of losing the personal attentions of the best firm in the trade to supply your future wants.

Given under our hand and seal this Twentieth day of August, A. D. 1894.

Burns & Raynor.

**Boys going to and from the Convention
made welcome.**

Boston.

To write news from Boston at present one must first manufacture it. There is nothing transpiring in the flower trade either interesting or edifying. There is an abundant stock of everything floral coming in, a specialty just now being white Japan lilies, which are abundant and sell well for funeral purposes, etc.

The special meeting of the Gardeners' and Florists' Club on Thursday resulted in wise action and Boston will be represented by a creditable bowling team and it is hoped a shooting team as well at the Atlantic City convention.

The prospects are for a large and a merry delegation to the convention. Dirwanger from Portland who if not of the Boston crowd is yet always with them is going. Warren Ewell has ordered a special set of harmonicas in all keys and Elijah Wood has been learning several new songs. The ladies will be out in goodly numbers and altogether a delightful trip is anticipated.

The new city greenhouses which are now in process of construction will cover when completed an area of 16,760 feet of ground in addition to cold houses, propagating house, etc.

Haverstraw, N. Y.—W. H. Hillerman, formerly of Salisbury, Md., has purchased the establishment of Chas. H. Zundel here and will continue the business.

Davenport, Ia.—The new houses built this summer by F. L. Bills were one 11x100 for chrysanthemums, one 10x100 for carnations, one 11x100 for palms, and one 7x100 for violets. He has also rebuilt one house 18x60 and has put in city water, having had to carry it six blocks from the nearest connection with the mains. He now has a total of 20,000 feet of glass all in good shape. The weather has been very dry here and everything outside is burned nearly to a crisp.

Address THE AMERICAN FLORIST CO., Chicago.

THE CONVENTION.

The tenth annual meeting of the Society of American Florists promises to be the largest and most valuable ever held by the society, in spite of the hard times. This indicates that the trade has confidence in the future and that the value of our national organization is fully appreciated. There will be important questions to be passed upon at Atlantic City, but that they will be treated wisely and well none can doubt.

And there will be recreation as well as work. The florists of the "City of Brotherly Love" will be our hosts, and none know better than they how to care for their guests.

While some hold that so much time devoted to recreation detracts from the dignity of the society we are inclined to believe that this added feature has been an important factor in bringing out the large annual attendance which has done so much toward strengthening the society and given added importance to the labors of those who felt that work should be the only consideration. Certain it is that the society has accomplished more practical work than any similar organization that has eschewed the entertainment feature.

It is true there remains much to be done. There are live questions yet to be dealt with, and at this, our tenth meeting, several will receive the consideration to which they are entitled.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS, Toronto, 1st vice-president; A. L. JOHN, 114 Chambers street, New York, secretary and treasurer.

INDICATIONS point to a scarcity of white Roman hyacinths.

MR. CHAS. P. BRASLAN and wife sailed for Europe August 11.

L. L. MAY & Co., at St. Paul, are adding 7,000 feet of new glass.

RECENT RAINS will undoubtedly be of much benefit to vine crops, late potatoes and late corn.

Miss C. H. LIPPINCOTT is adding a two-story brick and stone store front to her Sixth street quarters.

THE PASSAGE of the Senate tariff bill places a duty of 10% on lily of the valley, palms, orchids and like forcing stock and apparently the same duty on all flower bulbs, whereas all of the above have been free goods under the McKinley bill. The question now is when will the new bill take effect.

WATERLOO reports of August 7th are more discouraging than ever in regard to the corn crops. Vines are also suffering and very little fruit is set on them yet. There will not be much of a crop unless there is a change soon. The like has never been known for 35 years past, abundance of rain being more customary than a drouth.

DO YOU WANT a list of the cemeteries of the country that use trees, shrubs and plants largely in the ornamentation of their grounds and that are apt to be large buyers of these and other horticultural supplies? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

DO YOU WANT a complete alphabetical list of chrysanthemums in commerce in America, with class, and brief, accurate description of each? You will find such a list in our trade directory and reference book for 1894. Price \$2.00.

Watch this Space!

Buffalo.

Two weeks of high class horse trotting has just closed, a game of ball (Rochester vs. Buffalo) is coming off on Thursday next, and then for Atlantic City with all its glorious opportunities for recreation both mentally, physically and "sportingly." With all this in the immediate past, present and future, there are only a very few of us old fellows who are giving much thought to serious business. There is really not much to attend to in the selling way, but plenty for the greenhouse man to busy himself with. Very fair roses are now coming in from nearby towns. Carnations are very near their end. The dry weather is telling on sweet peas, and good ones are scarce. Asters are now filling a gap. Altogether there are sufficient flowers to meet all demands.

It has been quite cool of late, too cool to make one feel jolly, but so many events of a sportial nature have enabled most of us to keep up our normal temperature. We hope to see a good strong delegation leave here for Atlantic City and think there will be more than have attended any other, still there won't be as many as should be. J. H. Rebstock prefers the Adirondack Mountains for a week; serve him right if he got lost in the primeval forest. But I am not attempting to explain why Tom, Dick and Harry won't attend. Most of them are willing that a few should spend their time and money in the elevation of the business and they can later on reap the benefit. Prof. Cowell leaves this week for Brooklyn to attend the convention of the Am. Asso'n for Advancement of Science, of which he is a prominent member. He will then advance himself on to the Quaker City Sunday or Monday. There are several here who are rejoiced to see that a shooting tournament at artificial birds is on the program. We hope it will be in the hands of some one who thoroughly understands trap shooting. Two guns will go from here, so some must think they can shoot.

I was a little premature in saying two weeks ago that our boys would go by the D. & L. road. We shall without doubt go by the Lehigh Valley. It is much the shortest route and no change of cars to Philadelphia. I wish I could announce now the hour, but no doubt the train which will carry the most will be that that leaves here on Monday 9:15 a. m. arriving in Philadelphia about 8 in the evening. That will give those fortunate

enough to be there an opportunity for a good night's repose, more or less, and a chance to join the large delegation in the morning. To those who suffer with insomnia in strange hotels I would recommend that they retire early, screw down the gas low (but not quite extinguished) and read and re-read the latest effusion of the Bard of Kingsessing, "come to the convention." I tried it last night and on getting to the word lassies for the 7th time I was sound asleep.

W. S.

Grow Swainsona.

The best and most profitable pure white flower grown. Takes the place of Roman hyacinths or lily of the valley, producing spikes of flowers from 4 to 6 inches long, in the greatest abundance the entire year—never out of bloom—lasting well when cut. 100 Swainsona will pay you three times as much as same space in best carnations. No florist should be without this most useful flower. After a trial it will be considered indispensable.

EASY TO GROW.

An exceptionally good and paying cut flower.

Strong young plants, \$1.00 per doz.;
\$6.00 per 100.

Larger ones, \$1.50 per doz.; \$10 per 100.

FAUST & BRO.,

THE AMERICAN FLORIST CO.'S DIRECTORY REFERENCE BOOK

FOR 1894

CONTAINS THE FOLLOWING:

1. The names and addresses of the Florists, Nurserymen and Seedsmen of the United States and Canada, the exact branch of the business each is engaged in being indicated.
2. A separate list of firms that issue catalogues, the space devoted to each branch of the business in each catalogue being also given.
3. A list of the names and addresses of superintendents of leading parks in the U. S. and Canada.
4. A list of the principal cemeteries of America at which the arts of the landscape gardener and florist are used in beautifying the grounds.
5. A complete, alphabetically arranged list of Roses in commerce in America, with class, habit of growth, date of introduction, name of introducer, and brief, accurate descriptions of the flower of each. Synonyms are also plainly given.
6. A complete, alphabetically arranged list of Chrysanthemums in commerce in America, with class, and brief, accurate description of each. Synonyms are noted and varieties that are very popular with American growers are designated by a star, and this year's introductions by a dagger.
7. A complete, alphabetically arranged list of the Carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each.
8. Seasonable Hints for the year, arranged in weeks, written by Mr. William Scott, and covering every detail of a general florist business. This is decidedly the most valuable contribution to the literature of the trade ever published. It is written in a plain, practical way, by a man who knows what he is talking about.
9. A historical sketch of the Society of American Florists from its organization to date, including officers for each year and lists of essays read at each meeting, with other information of interest.
10. A similar historical sketch of the American Association of Nurserymen.
11. A similar historical sketch of the American Carnation Society.
12. A similar historical sketch of the American Seed Trade Association.
13. Similar historical sketches of the Florists' Hall Association of America; of the National Chrysanthemum Society of America; of the Florists' Telegraph Delivery Association.
14. A complete list of all National and Local Trade Organizations, with names and addresses of principal officers, time and place of meetings, etc.
15. Statistics of Commercial Floriculture in the U. S. from the last census.
16. Statistics of the Nursery Industry in the U. S. from the last census.
17. Statistics of Seed Growing in the U. S. from the last census.
18. A list of Leading Horticultural Societies, with name and address of the Secretary of each.
19. Full information about Express and Postage rates on plants, shrubs, trees, seeds and bulbs

No less than 270 pages of valuable reference matter in compact form, and all UP TO DATE.

PRICE \$2.00 POSTPAID.

HENRY A. DREER,
Philadelphia, Pa.

Tarrytown and Scarborough, N. Y.

When Tarrytown is mentioned one involuntarily thinks of Pierson; to one interested in floriculture the two are inseparable. This again recalls cannas, especially to anyone who had the good fortune to see the magnificent canna display at the World's Fair last summer.

F. R. Pierson's place is not difficult to find. At this season of the year you can see it from afar, the beds of cannas looming up in brilliant scarlet and gold, in the presence of whose glory the surrounding masses of shrubbery and herbaceous plants shrink almost into insignificance. What an object lesson these gorgeous clumps of Alphonse Bouvier, Charles Henderson, Florence Vaughan and Count Horace de Choiseul furnish to the people of Tarrytown. It will be strange indeed if every garden of any pretensions in the town does not boast a canna bed next year after such a practical demonstration of the possibilities of these plants.

One of the showiest groups is that of a new variety, Sunshine, a seedling of Mr. Pierson's, whose effectiveness fully justifies its name. It makes an excellent bedder. The color is the glowing orange vermillion of Paul Marquant, but the flower is much larger and fuller. Two other seedlings inside the house attract much attention. One, Helen Gould, is a combination of strong orange and yellow shading, which gives a wonderfully luminous effect; the other, Golden Heart, is a deep, even scarlet, with no edging or marking, but a clear orange center, the flower being very full and possibly more nearly approaching the ideal form than anything yet introduced. Lemoine's new yellow, Eldorado, is another variety that shows up particularly well.

The five mile drive from Tarrytown to Scarborough, where the Pierson rose houses are located, is through a charming country, the road running between magnificent private estates and overlooking the broad Hudson for most of the distance. In the houses at Scarborough Mr. Pierson appears to have pretty well solved the problem of cheapness combined with durability. Each house as added year by year shows some improvement over its predecessor—some economy in heating or equipment, some advance in operating, a little more light, a little better ventilation—until in the most recently constructed house it would seem as though the extreme limit of advancement had been reached. Mr. Pierson is not so convinced, however, and expresses the belief that the best houses of the present day will eventually be surpassed to the same extent as these surpass their predecessors of a few years back.

100,000 young roses are raised here annually, of which 25,000 are required for home planting; American Beauty and Meteor are the leading varieties. Kaiserin Augusta Victoria, Bridesmaid, Mme. Caroline Testout, Wootton, Perle and Bride are also grown, but in lesser quantities. Ten acres of ground outside are laid out in well kept nurseries for ornamental, deciduous and evergreen trees and shrubs, miscellaneous hardy herbaceous plants and bulbs, giving employment to thirty-five or forty men.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Do YOU WANT a copy of the rulings of the express companies about rates on shipments of plants and nursery stock? You will find full information in our trade directory and reference book for 1894. Price \$2.00.

Largest and oldest special culture of pansies; received premiums at all large exhibitions, the last at Chicago in 1893; offers first-class pansy seed, especially Cassier, Frimardeau and Bugnot, also all of the best older and newer kinds.

Send 2 francs for Catalogue. Mention American Florist.

PANSIES...

Every Grower Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders.

An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance.

Low prices on Lillium Harrisii, Longiflorum, Roman Hyacinths, Lily of the Valley, etc.

Special low prices on Rustic Baskets.

HERRMANN'S SEED STORE,

413 EAST 34TH STREET, Near Long Island Ferry, NEW YORK.

Chicago to Atlantic City.

It appearing that satisfactory connections cannot be made at Philadelphia for Atlantic City on train leaving Chicago at 3 p. m. it has been decided to take the train leaving at 11 a. m., Sunday, August 19. This train reaches Philadelphia at 1:25 p. m. Monday and there are trains leaving Philadelphia for Atlantic City at 2 p. m., 3 p. m. and later up to 5:40 p. m. The run to Atlantic City from Philadelphia takes 2½ hours, so if the 2 p. m. train is taken the party can be in Atlantic City at 4:30 p. m., in ample time for the various committee meetings Monday evening. As the last train for Atlantic City leaves at 5:40 p. m. and the train leaving Chicago at 3 p. m. does not reach Philadelphia till 7 p. m. next day, going by that train would necessitate staying over night in Philadelphia and taking an early morning train to Atlantic City, which would of course be very undesirable, hence the change.

Those wishing to travel with the Chicago party will meet at the office of the AMERICAN FLORIST, 322 Dearborn street, 3d floor, between 9:00 and 10 a. m. Sunday, August 19, where the special rate tickets will be on sale. The train leaves the Union Depot at 11 a. m. Berths may be reserved by addressing the chairman of the Chicago Club's committee, Mr. G. L. Grant, 322 Dearborn street, Chicago.

Boston to Atlantic City.

The delegation from Boston to Atlantic City will leave, via Fall River Line, on Sunday, August 19, at 7 p. m., and return via same line on boat leaving New York on Saturday p. m., August 25. Tickets for this excursion can be procured of the undersigned at \$11.25 for the round trip.

Travel being very heavy at this time of the year a number of state rooms, at \$1 each, have been secured in advance, and will be assigned to applicants in order as received while they last. Early application is solicited, to the end that the greatest amount of comfort and pleasure may be secured for all. Address Wm. J. Stewart, 67 Bromfield street, Boston, Mass.

INTRODUCED IN MANY YEARS.

"300 Blooms on one Shoot."

Copyrighted 1894, by Ellwanger & Barry.

"The most beautiful hardy Rose of its kind introduced for many years."—*Gardeners' Chronicle, London, England.*

"Of the many fine garden Roses introduced during the past ten years, there is not one of greater importance or likely to prove more valuable than 'Crimson Rambler.'"—*Gardeners' Magazine, London, England.*

DESCRIPTIVE CIRCULAR AND HANDSOME COLORED PLATE FREE.

ELLWANGER & BARRY,

MT. HOPE NURSERIES.

54th Year.

Rochester, N. Y.

Foreign Notes.

At the horticultural examination of the Royal Horticultural Society, held May 1, the list of candidates included many who were not gardeners, for example, a number of teachers, both men and women, several clerks and mechanics, and one policeman! A good many women appeared among the candidates, the highest being eighth in the list. The questions of this examination were chiefly relating to market gardening.

Rhododendron Schlippenbachi is a Chinese variety recently introduced. It has something of the habit of R. sinensis (Azalea mollis) with large flowers, like Azalea indica. The flowers, open as an ordinary azalea, are three inches across, rosy lilac, spotted about the base with dark brown. There are often about six flowers in a cluster, making the plant very showy. It is a native of the wooded hills of Corea and Manchuria, and is a garden plant in Japan.

Among novelties in sweet peas from Mr. Eckford are Salopian, an odd deep crimson veined with deep purple, and Countess of Powis, brilliant rose carmine, very fragrant. These two varieties received certificates in London last month.

WE HAVE RECEIVED the "Botanical Guide to the Phipps Conservatories in Pittsburg and Allegheny City." It is a volume of 204 pages, freely illustrated, containing lists of the plants of different classes found in these conservatories. It is written in an interesting style, giving information regarding the different plants in a manner to interest the general public, for whose benefit it is designed. A copious index of common and botanical names adds to its value; the only criticism to be offered is some laxness in the proof reading, resulting in errors in plant names. The account of the parks is very instructive, and the whole book is of more than local interest.

DO YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1894. Price \$2.00.

DO YOU WANT Mr. Scott's seasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$2.00.

Foreign Notes.

Snow fell in the Alps July 15.
A new and showy hybrid bertolonia is *B. guttata* var. *Alfred Bleu*, obtained from Van Houttei × *rosea punctatissima*. The leaves are deep bronzy green, ribbed and spotted with brilliant carmine. The originator of this variety, M. Alfred Bleu, after whom it is named, is sending out a series of such hybrids, including some of great beauty and brilliancy of coloring.

Sonerila Mrs. H. Walter is a hybrid obtained from *orientalis* × *Hendersoni* elegans. The leaves are large, ovate elliptic, olive green, thickly marked with roundish silvery spots. It is very robust in habit and showy.

A variegated form of *Rubus japonicus* has been recently introduced; it is similar in growth to the type, but the leaf is variously marked with white, or often entirely white with red ribs and petioles. It is a showy plant, the foliage suggesting a resemblance to *Vitis heterophylla*.

Cochlioda Noezliana is a handsome and distinct orchid recently introduced from Peru. In habit it is similar to an *odontoglossum*; the scape is many-flowered, the color of the bloom being orange scarlet and very showy. The *cochliodas*, formerly known as *mesospinidium*s, comprise a small family of terrestrial orchids, closely allied to *odontoglossum*s.

At the recent sale in London of the Pickering Lodge collection of orchids some of the prices realized were as follows: *Cattleya Mendeli* var. *Bluntii*, \$500; *Sobralia xantholeuca* alba, in flower, \$220; *Cattleya Gaskelliana* alba, in flower, \$190; *C. crispum* superbum, very fine, \$260; *Sobralia Lucasiana*, a fine specimen, \$230; several *Odontoglossum vexillarium* superbum, in flower, from \$50 up; *Dendrobium Statterianum*, \$100; *Cypripedium Veitchii*, \$75.

CONVENTION.

PALMS and Decorative Plants.

Areca lutescens, Kentia Belmoreana, K. Forsteriana, Latania borbonica, Phoenix rupicola, P. reclinata and Cocos Weddeliana, are the best and most popular Palms. I have many thousands, in all sizes, besides some other kinds not quite so well known perhaps, yet good. Also other Decorative plants such as Ficus elastica, Pandanus utilis, P. Veitchii, Araucaria excelsa, Aspidistra, etc., etc. All are in elegant condition, and all are for sale at moderate prices. I guarantee perfect plants and good packing.

SEPTEMBER AND OCTOBER ARE THE BEST MONTHS TO BUY IN.

Members of the S. A. F. are invited to inspect my stock of sample plants on Exhibit during the coming Convention, and are most cordially invited to visit my establishment en route to or from Atlantic City.

Nurseries: Logan Station.

Mention American Florist.

St. Louis.

The regular meeting of the Florists' Club occurred on the 9th, and was well attended, the election of officers for the ensuing year being the principal business to be transacted.

Mr. Wells of the B. & O. road was present and was sorry to say that the B. & O. could make no rate for the club as a body as they had hoped to have done, owing to the matter having become known in railroad circles, and the rate formerly promised was declared off.

The election of officers resulted in the re-election of Alex Waldbart for president, Frank Fillmore for vice-president, Emil Schray for secretary and John Young for treasurer. The board of trustees consists of C. A. Kuehn, J. J. Benecke and R. F. Tesson. The secretary's report showed the club to be in a healthy condition, having an active membership of 60; the treasurer's report was very gratifying, a balance on hand of \$259 40.

After the election of officers a paper was read by Mr. Wors on the question of "wholesaling cut flowers" which caused considerable discussion.

Before the close of the meeting all members that would attend the convention provided a reduced rate were secured were asked to make the fact known and Mr. Waldbart ran up a list of more than fifteen possible attendants with which he will go to work and try and make rates. Those going will in all probability leave here on the morning of the 19th, going by way of Cincinnati, Washington and Philadelphia over the B. & O.

A special prize was announced by Mr. Weber, to be offered at the chrysanthemum show for carnations and another one hinted at for roses.

Mr. Harry Young and family left for the east on the 6th, expecting to spend some time on the coast before the opening at Atlantic City and were joined later in the week by Mr. Chas. Young and wife.

Everything is very quiet, convention talk being about the only thing heard.
R. F. T.

Studer Offers

8000 PALMS, healthy, grown without any stimulant or extra heat, just the size people mostly buy, will be worth twice their cost in a short time. Coeus Weddelliana, from 3 1/2-inch pots, 15 to 18 inches high, 20 cents each. Latania Bonboukia, Kentia, Coryphas, Phoenix, and Senforthia Elegans, the latter 2 to 3 feet high, the former 18 to 24 inches, all in 5-inch pots, 30 to 40 cents each. Ferns and Dracaenas in great variety. Othello Orange, with or without fruit. Gardenias, with buds. Violets and a large variety of bedding, basket, and ornamental plants, hardy and greenhouse Climbers, perennials, herbaceous plants and ornamental hardy Grasses, the best variety of ever-blooming Roses, etc. Send a trial list of what you want and get lowest prices.

S. J. RUSSELL,
850 Montgomery St.,
JERSEY CITY, N. J.

Wm. K. Harris

extends a hearty invitation to the members of the S. A. F. and their friends, to call on him, on their way to or from Atlantic City, and inspect his new place of over sixty thousand square feet of glass; over nine thousand feet of it being polished plate. The only greenhouses in the world glazed with this expensive glass.

A well appointed place, with everything adapted to the profitable production of our stock in trade, is not the only thing of interest here.

The clean, healthy growth of our plants is the admiration of many, especially the Rubbers. They are a wonder to all who have seen them! I have five houses full of this popular decorative plant, of all shapes and sizes, from a few inches to ten feet high, many of them making natural breaks—that is a plant producing many side shoots without being topped. This is a mystery to many, why mine should do so, and others not. The way to learn is to be taught, so come and see nature at work.

Plants, like people, are often stunted and sickly in the mansion, while the hovel contains health and vigor. In my plant palaces, health universally abounds, as we allow no excess of high stimulants among our occupants. They must all live upon plain fare, and take plenty of pure, fresh air.

Take train at Broad Street Station Penn. R. R. for 49th Street Station. It is only ten minutes' ride to 49th Street Station, and ten minutes' walk to my place from 49th Street Station.

Trains leave Broad Street Station as follows: 6:49—8:46—10:46 a. m. 12:13—1:28—2:18—3:15—3:47—4:33—5:16 p. m.

On Friday, August 24th and Saturday, August 25th, I will have a conveyance at 49th Street Station at the arrival of each train to convey my guests over. After inspection of my place, I will drive all who wish to see my friend Robert Craig. It is about a mile from here.

WM. K. HARRIS,
55th & Springfield Ave., Philadelphia, Pa.

Begonia Semperflorens Rosea.

THE EVER-BLOOMING SORT.

Is unrivalled as the best bedding plant, the best winter flowering, the best market and best selling plant we cultivate to-day. We have hundreds of it planted in full sun light, and nothing can surpass them in attractiveness and beauty. It sells the whole year round and is preferred here to the best Azaleas. We have sold many hundred in Auburn (6-in. pots), at 50 cts. to \$1.00 each, and the demand is constantly increasing. You will find this charming plant to give the greatest satisfaction and pleasure to your customers and greater profits by far to yourself than any plant now in cultivation.

I offer extra strong well rooted cuttings, and strong bushy well branched established plants, ready to move upwards, at the following reduced rates. Till **SEPTEMBER 30 ONLY** and **GUARANTEE** the safe arrival of plants. Extra plants added, per Express, cash with the **ORDER**.

	Express, Dozen.	Mail, Hundred.	Express, Dozen.	Mail, Hundred.

John Gardiner & Co., Philadelphia, Pa.

Toronto.

Since writing my last notes there has been no rain, and outdoor vegetation is getting a thirsty look about it. Small places can be kept green with the hose, but in the case of parks and public squares it is no easy matter, and in some cases an impossibility. Among the florists I hear of nothing actually suffering, but still a shower would be most acceptable.

The annual picnic of the Gardeners' and Florists' Association, which was this year held at Victoria Park, on Wednesday, August 8, was quite a success, and though the excitement was at no time calculated to seriously injure ordinary people's nerves a very pleasant afternoon and evening was spent. Cricket, howls and quoits occupied most of the afternoon, then there were children's races with lots of good toys for prizes, and in the evening the boys and girls who are expert on the light fantastic toe indulged themselves to their heart's content. Many took the electric cars home, but those who waited and took the boat had the extra enjoyment of songs, music and the beautiful lake air. The weather though at one time threatening was most beautiful. Altogether the picnic was a great improvement on last year's, and still there is room for further improvement; experience in the management of these affairs is not gained in a day.

The final prize list for the chrysanthemum show will probably be published early in September; the committee wants to make sure of as much money as possible before finally deciding on the amount to be given as prizes. Two influential citizens are giving a good deal of their time towards getting a big subscription list, and it is likely that about \$750 will be given, which is \$200 more than last year. The committee seems to be fully alive to the necessity of doing more towards the decoration of the hall and the more artistic staging of the exhibits, so that the prospects for a really good show this year are bright. E.

Wholesale Commission Florists.

There will be a meeting of the wholesale commission florists at Atlantic City for the purpose of organization immediately after the afternoon session of the first day of the Convention.

MARSCHUETZ & CO.

23 & 25 N. 4th St., PHILADELPHIA, PA.

Thousands of persons throughout America have the past thirteen years used

SLUG-SHOT

TO DESTROY

Currant and Cabbage Worms, Potato Bugs, Cucumber Fleas, Rose Lice, and Slugs, Lice on Cattle, Fowls, Etc.

There is scarce a place of size but will be found some merchant who sells SLUG SHOT, and usually in connection with the seed trade. The Great Seed Dealers are the chief distributors of SLUG SHOT. In all these years no case of harm from its use is known. SLUG SHOT stands to-day the most successful general insecticide in the world for use on VEGETABLES, FRUITS OR FLOWERS. It is put up in various sized packages to suit all wants. We prepare all sorts of INSECTICIDES and FUNGICIDES for spraying or in powder.

THRIP JUICE—For scale, Insects and Caterpillars. Used largely in Florida.

SOLUTION OF COPPER—For Rot, Blight, Etc.

GRAPE DUST—Powder for destroying Mildew on Roses and Gooseberries.

Cincinnati.

Hot and dry. Aug. 9 the thermometer stood at 97° in the shade and was inclined to go higher. Quite a number of our growers are busy hauling water and trying to keep their plants alive. Store trade has been quite good for the past week, several prominent people having died. The growers have been able to sell all the flowers they had.

Karl Brown of Livingston's Sons, Columbus, was in the city Tuesday.

I notice that on August 8 the George H. Mellen Company of Springfield, O., was incorporated under the laws of Ohio; Seeds and plants; capital stock \$25,000; incorporators, George H. Mellen, David N. Elder, Isaac W. Rodgers, John H. Rodgers and Caleb Tuttle. This company has bought the "Innisfallen Greenhouses," formerly owned by Chas. A. Reeser. The above incorporators are all good business men and well fixed financially. We wish them success.

August 9 the writer had the pleasure of visiting Richmond, Ind. Mr. E. G. Hill had just returned from the wilds of Michigan and is much improved from the trip. Says he had lots of sport fishing, and his health certainly shows it. His chrysanthemums are doing nicely and if nothing happens they will have two or three flowers in Richmond this fall. G. R. Gause & Co. are busy shifting and getting ready for fall trade. Beach & Co. were quite busy with funeral work, and I noticed some extra choice asters in one of their houses.

I am sorry to say that the railway companies, after making us rates to Atlantic City, have withdrawn same and now say it will be impossible to do better than mileage, which is 2 cents per mile. This will considerably reduce our party.

Reply to F. P.

1. The leaves of purple beech have evidently been eaten by some beetle or grasshopper, probably the latter.

2. Nothing outside of handpicking can be done to remove the mealy bugs from a graperly at this season. Wait until the vine rods are dormant and then give a thorough cleaning.

3. To prevent the grapes from cracking withhold water from the roots and see to your drainage.

THE CHAMPION

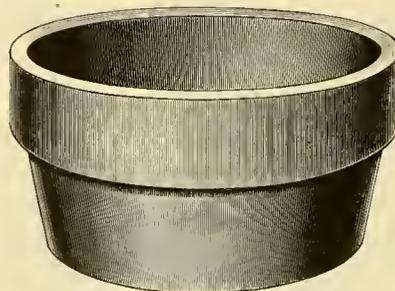

AUTOMATIC VENTILATOR.

The cheapest, easiest to operate and by far the best machine in the market. No shafting used in its construction. Don't buy a Ventilator until you have seen our illustrated descriptive circular, which will be sent you free, giving prices, etc. Also **Champion Soil Pulverizer and Sifter.** Exhibited at Florist Convention.

Address

A. Q. WOLF & BRO.,

331 E. 1st St., DAYTON, O.

WISHING TO INTRODUCE to the Florists our a good thing it is, we offer sample crates f. o. b. Detroit, which contains 51 5-inch, 24 6-inch, 21 7-inch, 20 8-inch, 16 10-inch and 15 12 inch, for \$7.40 cash with order. This is the price we sell by the 1000.

Of the many testimonials that we receive we call your attention to the communications of two of the best known expert Florists in this country:

DETROIT, July 19, '94.

DETROIT FLOWER POT CO.

SIRS:—We wish to say that we have used the Pots (as made by you) for the past seven years, and find them very useful for many things, such as bulb forcing, window and table decorations, fern growing, and might say we find them almost indispensable around greenhouses and store. We grow a great many single stem "mums" in them—one in a 5-inch pan up to a dozen to fifteen in a 12-inch pan, and cannot recommend them too highly to florists.

Respt yours, JNO. BREITMEYER & SONS.

BUFFALO, N. Y., July 17, '94.

DETROIT FLOWER POT CO. SIRS:—Will mail you my order for Pots in a few days. Don't be afraid to make up a good stock of them, for when the florists find out what a good thing they are for bulbs, ferns, seed pans, etc. you will have a grand rush for them. I use them for forcing all bulbs, and find the 8 and 10-inch grand for Tulips, Romans, Narcissus, Daffodils. The 5.6 and 7-inch for Ferns, Freesias and Valley, and any of the sizes are good for table or window decorations. I also find them a grand thing for growing "Mums" to single stem flowers; an 8, 10 or 12-inch pan with from 10 to 20 plants is a fine thing.

Respectfully yours,

WM. SCOTT.

Price List of Standard Flower Pots sent on application.

Baltimore.

A most unparalleled drought is burning up out-door plants and destroying crops in this locality, making the gardener's life a burden of watering and syripping, and with all his efforts, leaving him neither the velvety grass nor the brilliant flowers that are generally to be had with very little exertion. The market men are a cheery lot and a walk among them is good for the blues, as the writer found last Saturday at Lexington market. "Give me seventy-five cents and I won't unload" said one. "I won't take less than five dollars for my chance" said another, and with chat and banter the awnings went up and really nice plants of asters, geraniums, begonias, ficus, cyperus and palms were set out to catch dimes of the passer by. It is a pleasure to see as good plants offered in such a season as are to be seen now in our markets.

One of our Israelitish cash bargain merchants has taken permanently to handling plants it appears, as he is still offering fern pans filled along with fifty dollar bicycles, ten cent candy and three cent dry goods.

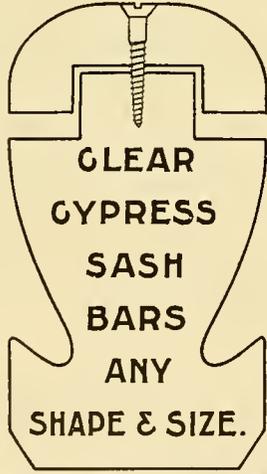

The prospect of a large attendance of the club at Atlantic City is not very encouraging just now, probably many will make up their minds at the last moment and go.

Mr. Hy. Wiedey is putting up a small greenhouse adjoining that built last year on the York road.

Messrs. Samuel Feast & Sons are building two roses houses each 100x20.

Brackenridge & Co. have secured Mr. Jno. C. Lewis, for several years past with R. Scott & Sons, Philadelphia, as manager for their "Rosebanks" place. M.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

The Atlantic City Convention.

The opening session of the tenth annual convention was peculiarly auspicious. It was an ideal morning, and the delegates, most of whom had arrived on the previous day, thoroughly refreshed by the bracing sea air, were in the best of spirits and ready to enter with zest into the exercises before them. The hall was beautifully decorated with hunting and plants, and was well filled when at 10 a. m. President Lonsdale of the Florists' Club of Philadelphia mounted the platform and called the meeting to order, and presented Rev. C. C. Stewart of Easton, Pa., who offered a short prayer. Mr. Lonsdale then introduced Hon. F. P. Story, Mayor of Atlantic City, by whom the visitors were cordially welcomed. The mayor expressed the pleasure of the local authorities in extending the freedom of the city to the representatives of a profession which was universally respected and appreciated. He hoped that all his hearers would be so well pleased with their visit that they would wish after going home to visit the place again. He mentioned, as an evidence of the orderly and exemplary character of the city, the fact that while the number of its inhabitants on the previous Sunday had exceeded 200,000 not a single arrest had been made by the comparatively diminutive police force of sixty. The mayor reiterated his welcome, and expressed the hope that genial skies and refreshing breezes would contribute to the enjoyment of the city's guests.

Mr. Wm. Scott of Buffalo made an appropriate response on behalf of the convention. He alluded to the wondrous growth and superior attractions of Atlantic City. Although the average summer population was reported at 160,000 the speaker said he had not heard of a single instance of disorder in this great seaside community during the twenty-four hours since his arrival, nor had he yet discovered the presence of a single policeman. He complimented the mayor by suggesting that that official might reasonably be assumed to embody in his own personality the persuasive power and force of a hundred policemen. Eulogizing New Jersey as the banner state in the union in floriculture Mr. Scott explained that within ten years that state had produced more roses, carnations, violets, and other flowers than all the rest of the American continent. Up to a recent date it had contained the largest and most renowned floricultural establishment. He then reviewed the ten years history of the S. A. F., with its annual meetings in the leading cities, and congratulated his hearers that they had found the ideal city for a convention in the summer season. To the Philadelphia florists he said the S. A. F. was indebted for the pleasant meeting now being enjoyed. That city of loving brotherhood, not satisfied with the hospitality it had extended

on the occasion of the second annual convention, which was held there, had repeatedly insisted that the florists should again become their guests. He thought that Philadelphia was desirous of playing the host permanently. Concluding with expressing the thanks of the visitors for the mayor's welcome, he said his associates would utilize to the utmost the opportunities of recreation afforded by the freedom of the city now accorded.

President Anthony then read his address as follows:

President Anthony's Address.

LADIES AND GENTLEMAN: The year which has passed since our last meeting has been one of great depression in all lines of trade. The florist's business has felt the depression in trade, and has received its first check in its onward progress. Let us hope the check is but temporary.

In view of the fact of the dull times it affords me great pleasure to see so many members of the Society of American Florists present at this meeting. Coming as they do from all parts of this country it augurs well for the future meetings of the society when an attendance of this size can be had in times like the present.

The progress that has been made in ornamental horticulture in the short space of ten years since this society was organized is truly marvelous. A comparison of the chrysanthemum show of last year with those of ten years ago will demonstrate the remarkable improvement that has been made in the cultivation of show flowers. The development of the chrysanthemum has surpassed the expectation of the most enthusiastic cultivator of ten years ago. Though the material progress of these shows has been thus remarkable it is not more so than has been the increase in their numbers. Only a few years ago flower shows were held in less than a half dozen of our large cities. There are very few towns now of any importance in which a more or less pretentious flower show is not held.

That the improvement of carnations has been nearly as great of the chrysanthemum everyone will admit who has seen the splendid display of that flower at the meetings of the Carnation Society. The great improvement in carnations that has been made in the last few years has been almost entirely by American cultivators. The carnation as grown in this country differs so materially from those grown in Europe that those produced here might be called carnations of American type.

While the carnation and chrysanthemum growers have been making these gigantic strides towards the ideal chrysanthemum and carnation, what have the rose growers of this country done to improve that flower? It is true that w

THE ATLANTIC CITY convention will be found pretty well covered by our reports in this issue, though reports of the entertainments of Friday are unavoidably left until next week. It is safe to say our tenth anniversary saw one of the most interesting and instructive meetings we have yet experienced, and everything points to a long and prosperous career for our national society.

MILLBROOK, N. Y.—A chrysanthemum show will be held here November 6-7. There will be exhibits of fruits, flowers and vegetables, in addition to the chrysanthemums.

DO YOU WANT a list of the leading cemetery superintendents? You will find such a list in our new trade directory and reference book.

have greatly improved our methods of cultivation of the rose for the production of bloom, and are enabled to produce them in large quantities and of a better quality, leaving the production of varieties almost entirely to growers in other countries, where the climate is as different from ours as our methods of cultivation and uses to which we put the rose are different from those of the European growers. The result is that vast sums are paid every year for new roses, very few of which are ever heard of after the first trial. Let me ask the question, why can we not produce our own varieties of roses as we do carnations and chrysanthemums? It is true that it takes a longer time to produce results with roses than with either carnations or chrysanthemums, but would not the results when attained be worth the cost? This seems to me to be the most promising field for some enterprising rose grower. I believe the time will soon come when we shall have a class of roses of American origin especially suited to our climate and requirements.

We had fondly hoped that the bill which is before congress, granting this society a national charter, would have passed before now. It is a matter of prime importance that a charter be procured, and it is very desirable that we have a national charter, but if one should not be granted before this congress adjourns I would recommend that a charter be secured from the District of Columbia or some one of the states. The Society of American Florists has been a homeless wanderer for ten years. The time has now come when we should secure a home, a suitable office should be procured for our secretary, where the books and papers of the society could be kept, and where periodicals and reports on subjects connected with horticulture could be collected, and in time a library.

The secretary should receive such compensation for his services as would enable him to devote his whole time to the interests of the society. Much of the work that is now intrusted to committees, such as the committee on statistics and nomenclature, could either be done by the secretary, or the committee could be materially assisted by him. There are innumerable ways that a paid officer could be of great benefit to the society. I would earnestly recommend that arrangements be made as speedily as possible to carry this recommendation into effect. The secretary and treasurer should be required to give a bond to the society for the faithful performance of their respective duties. This has not been done heretofore.

What are to be the future relations between this society and its numerous offspring, the chrysanthemum, carnation and rose societies, should receive our serious consideration at this time. That the chrysanthemum and carnation societies have done much good by imparting useful knowledge in the culture of their special favorites we all know, but could not this work be as well done by a section of this society as by a separate organization, on the principle that in union there is strength? I think the work of all the societies could be much better done by the Society of American Florists. It would certainly be more convenient to have one secretary's office for all the societies than to have them scattered as they now are.

It seems to me that the Society of American Florists can confer no greater benefit upon the profession than to provide a means whereby the wheat may be separated from the chaff among the army of journeyman florists. I believe it can

do this by establishing an examining board whose duty it shall be to examine florists, who may wish to avail themselves of the privilege, granting certificates setting forth the degree of proficiency possessed by each one examined. The examination might be oral or written, or a combination of both. The subjects touched upon would naturally be very diversified, but not more so than the florist's daily work. There should be a separate examination for each specialty; take for example the rose. The one subject might be divided into numerous heads, say:

- a Propagation,
- b General culture,
- c Insect enemies,
- d Fungus enemies,
- e Fertilizers and how to use them,
- f Growing for flowers,
- g Growing for plants, etc.

A man, who, after wrestling with these inquiries, carried out to their fullest extent, could show a first-class rose certificate, would hardly need any other voucher, and one possessing rose, carnation and chrysanthemum certificates would not need any other evidence to prove himself a good all around grower of these flowers. The growing of general hedging plants could be covered in another division, and of hardy plants in still another. Orchids too, and palms and like decorative plants should be provided for. In these days of specialties it is not necessary that a man should have a high percentage in every department. We already talk of rose growers, carnation growers, etc. If we know just what a man can do (where he is strong and where he is weak) selection for the work of most importance to the employer is simple.

That some such plan would be equally to the advantage of the working florist and his employer no one can doubt, and that it would give our profession a higher standing in the eyes of the public is equally certain; people have a good deal of respect for organized effort in any form. When it is known that a florist, to be recognized as such, must pass a careful examination and receive a certificate of proficiency people will conclude that they really occupy a higher plane than an agricultural laborer, with whom they are very often classed.

As to employers, the granting of certificates should greatly simplify their anxieties as regards help. Those who want good men, worthy of fair wages and fair treatment, will want men who hold certificates; if they want cheap labor they must expect unskilled labor. Such a consummation as this, likely both to elevate the position of the journeyman florist, and to lessen the anxieties of his employer, is surely worth consideration. The adoption of such a plan of work would also surely strengthen the Society. It would bring to its annual meetings many journeymen anxious to secure certificates from the examining board (which should be in session at each annual meeting), and certificates issued by it would magnify its importance as an organization of real practical benefit to the trade. Of course the examining boards should be composed of the best and most capable men in the society in the several divisions, and certificates awarded with the greatest care.

Discussion of the president's address followed. This was confined almost exclusively to that feature of it which recommends the appointment by the society of

an examining board, before whom young men shall be invited to appear for examination as to their qualifications for the business, and that certificates shall be issued to applicants showing their degree of proficiency. Several speakers deemed the project impracticable, while others contended that the society would do well to make an effort to put the plan into execution, believing that good would result. No definite action was taken at the time.

In the absence of Prof. Trelease of St. Louis, chairman of the Committee on Nomenclature, the report was read by Mr. May.

Secretary Stewart's Report.

The story of the meeting at St. Louis last year having been given in full detail in the printed report, it is hardly necessary to make more than a general allusion to it on this occasion. There are a few points however, to which we might profitably give a moment's attention. It had been expected that the World's Fair would prove a contributing attraction, it being the general opinion that the attendance of eastern members especially would be much larger on this account than would ordinarily be the case at a point so far west, but these expectations were not realized, and it transpired that the World's Fair, instead of enhancing our attendance, had the contrary effect. Not many of our craft could spare the time to visit both Convention and Fair, so they naturally chose the latter.

Another drawback to last year's attendance was the fear of hot weather; this happily proved to be unfounded, and whatever the ordinary St. Louis weather may be, we must give it credit for having treated us well on that occasion.

These were the drawbacks. They were offset by many advantages which the visitors were not slow to appreciate, and which made the occasion one of the greatest enjoyment to all those who were present. Whether in visiting the far famed Shaw Botanical Gardens, riding through the beautiful avenues and parks of the city under the escort of our big hearted St. Louis brethren, listening to essays and discussions of more than the usual interest and value, or in meeting with the famous horticulturists from the Old World who honored us with their presence, the St. Louis Convention was a continual round of enjoyment both physical and mental, and all felt at home, from the moment we listened to those eloquent words of welcome from St. Louis' gifted mayor until we took a last lingering look at the radiant arches of the illuminated city.

As in every instance where the attendance at a convention has been small the receipts for the year have been materially reduced. From present indications the falling off is only temporary, however, as a large majority of the members who failed to pay their dues last year are coming forward cheerfully and making their arrearages good, and there is no doubt that the present year will see our paid up membership list fully up to the maximum. The whole number of dues collected for 1893 up to August 19th, is 607, and member of 1892 in arrears for 1893 numbers 269, but these figures will change considerably for the better when the large number of arrearages paid up at this meeting are counted.

Death has made unusual havoc in our ranks since we last met. Eleven of our members have been taken away, and in this number are included two who were among the Society's founders, and have

EDWIN LONSDALE

PRESIDENT-ELECT SOCIETY OF AMERICAN FLORISTS.

always been faithful workers in its behalf. The list of deaths is as follows:

N. Singler, Washington Heights, Ill., August 24, 1893.

C. A. Dahl, Atlanta, Ga., September 1893.

Thomas Hudson, Northampton, Mass., September, 1893.

H. A. Daacke, New York, N. Y., October, 1893.

J. R. Bather, Clinton, Iowa, November 22, 1893.

W. F. F. Murray, Atco, N. J., November 22, 1893.

R. J. Halliday, Baltimore, Md., March 11, 1894.

Harry C. Gass, Alleghany, Pa., March 20, 1894.

M. A. Hunt, Terre Haute, Ind., April 23, 1894.

L. Guerineau, Northampton, Mass., June 8, 1894.

W. M. Eldridge, Wilkesbarre, Pa., August 6, 1894.

The regular winter meeting of the Executive Committee was held at Philadelphia on February 13 and 14. The Philadelphia brethren were kind and thoughtful as always. Many timely questions regarding the Society's future policy and work were brought forward and earnestly discussed, and the foundations laid for the very comprehensive program which is now before you. Among the more important matters considered were our relations with the Hail Association, the Chrysanthemum and Carnation Societies and other auxiliary organizations, the feasibility of devising some equitable and economical plan of greenhouse insur-

ance against fire, the injury sustained by the trade through the shipment of lily blooms from Bermuda and the remedy therefor, the work of the Nomenclature Committee as well as that of the two special committees provided for at the St. Louis meeting, viz; on a standard List of Commercial Decorative Plants and Statistics of Exports and Imports. Requisite funds for the needs of these committees in their work were duly provided for.

The change in time for the sessions of this Convention, and substitution of afternoon for evening meetings was in accordance with the advice and request of Philadelphia members, who explained to the Committee that on account of the attractions and distractions peculiar to Atlantic City a fuller attendance at the meetings would thus be secured.

The annual badges provided for the Society having been long regarded as inartistic and inappropriate it was decided to have a new die made, which while adhering to the old design of a rose leaf should be a more truthful representation of that object, and it is believed that the members generally will be pleased with the change.

Resolutions in memory of the late Geo. W. Childs were drawn up by a special committee, and an engrossed copy prepared and sent to Mrs. Childs on behalf of the Society of American Florists.

Your Secretary would respectfully bespeak for the noted specialists who are to address us, a full attendance of all our members at the meetings, a recognition

to which these gentlemen are justly entitled. Note particularly the early hour at which the morning sessions open, and bear in mind that a full hall and prompt opening at the time named in the program will be due courtesy to the essayists, and will conduce to the pleasure of each and every individual by ensuring an early adjournment to the beach and its delights.

The committee on a standard list of decorative plants sent in report, which was read. Certain instructions to the executive committee suggested in the report were ratified by a vote of the society.

At the afternoon session Mr. W. H. Taplin of Holmesburg, Pa., read his essay on "Requirements for the elevation of our business" as follows:

Some Requirements for the Elevation of Our Business.

BY W. H. TAPLIN, HOLMESBURG, PHILA., PA.

In considering the problem of the elevation of our business, it will doubtless be remembered by many of those present that various phases of this subject have been very ably discussed by former essayists before this society, and it will therefore not be necessary to enter into any lengthy explanations or arguments as to why the business needs elevating, the admitted fact that there is room for improvement being quite sufficient excuse for the present writing, and this same fact will in all probability furnish the opportunity for much abler papers from other pens at future conventions of the Society of American Florists.

We find from daily experience that the most successful men of business are the most systematic ones, those who pay the strictest attention to the details of organization, and keep thoroughly posted in regard to any movements that tend towards the advancement of those interests in which they are particularly concerned. Eternal vigilance, we are told, is the price of success, and this is nowhere more true than when applied to the business of a florist, a business in which the habit of close observation is of the first importance if we desire to keep our stock up to a given standard, and our business abreast with the times, for in this age of keen competition the man who hesitates is lost.

Taking the figures of the last census as a basis, we can safely estimate that our business now represents an invested capital of nearly forty millions of dollars, and an interest of such magnitude as this sum indicates certainly should have some standing among the industries of the country. But our methods must be such as to command respect in order to gain recognition from the business world in general, and one great requisite in this direction is the practice of more system in our housekeeping, if we may be permitted to use this term in reference to greenhouse work. The man who takes no account of stock, and does not know the result of his sales in any particular specialty for the past season, nor how those sales compare with the results of former seasons, can not expect to make much progress toward the elevation of his individual business, and without the efforts of individuals any movement on this line by organizations will naturally prove to be failures. In the opinion of the writer, systematic work, orderly arrangement and cleanliness are among the first requirements to be observed by the

grower of plants who feels interested in the elevation of his business, for on system depends his profits, on orderly arrangement and proper display of his stock depend most of his sales, and cleanliness is an essential to the best growth of most plants. A heavy crop of weeds, muddy walks, broken down benches, and a generally unkempt appearance should not be accepted as indications of how busy we are, but rather as evidence that there is a screw loose in the management. This state of affairs, though not so prevalent now as it was a few years ago, is still too much in evidence in many establishments, and deserves a radical change, for if order is nature's first law we who practice "an art which does mend Nature," as Shakespeare tells us, should surely strive to observe that law.

Have a general cleaning up at proper intervals, keep walks, benches and all the surroundings of the houses neat and tidy, arrange the plants in the most attractive manner, and employ help enough to keep them in that condition. It is false economy to worry along with an insufficient force of men, and we all know that the most efficient and reliable help is the cheapest in the end, and in this connection it may be added that so far as my experience has gone, a proper proportion of men to glass is about one man to each six thousand square feet of glass in an average establishment, unless the business includes much outdoor work or jobbing, and in the latter case an extra man or two may be needed during the busy season at least.

A systematic arrangement of the labor should also be made, by appointing certain men to attend to the routine work of watering, ventilating and firing of certain houses (if the size of the place does not warrant the employment of a regular fireman), and these men to be held responsible for the performance of these duties at the right time, for by this method the men become more interested in the welfare of the plants under their immediate control, and will take some pride in keeping them in condition.

But this idea of systematic work is not only applicable to the grower, for even among the retailers the lack of system is sometimes found, and dirty floors, dusty shelves and littered counters are sometimes seen where we had been led to expect æsthetic elegance. By the use of the above term I do not intend to signify velvet carpets, lace curtains and a bell-boy with large gilt buttons, but rather the idea that where choice and delicate flowers are exposed for sale cleanliness should prevail, and some effort be made in the direction of proper display and adornment. The retail florist can be, and really is in some cases, an educator of the public taste, but in order to attain such prominence he must use business methods, and among these are courteous salespeople, careful attention in the selection and packing of even a small order, prompt delivery, and a regular system of book-keeping. A closer observance of these items would doubtless promote the interests of this branch of the trade to such a degree that many outstanding liabilities could be more promptly met, and thus much benefit accrue to the trade in general. But in order to make any of these suggested reforms operative the proprietor of the establishment must take the initiative, and with the adoption of certain regulations the habit of neatness and systematic work can be readily inaugurated among the men.

These brief remarks in reference to a more thorough organization of individual

establishments as a means of elevating our business, bring to mind the fact that there is another agency that we should encourage with the same end in view, namely, our national, state and local organizations. It is unquestionably true that the Society of American Florists has accomplished good in bringing the members of the trade together and stimulating the exchange of ideas, for by no other means could such a representative gathering be brought together, and similar benefits, though in a more restricted degree, have been secured from the various florists' clubs and horticultural societies. These influences should be encouraged, for they all tend toward the spread of knowledge of plants, flowers and gardening, and are thus agencies for the promotion and elevation of our business, and as such should receive our hearty support. A tasty exhibit at a local exhibition is a good card, and while there is not in all cases an immediate increase in trade from this source, yet it is one of the best opportunities for the florist to display his talent and enterprise, and to create a good impression on the public mind. And still another requirement for the advancement of our business is for every member of the trade, whether employer or employed, to secure as good a horticultural education as possible. I believe in a combination of practical experience and theoretical knowledge, with the former predominating, for while we sometimes note actual successes in the trade made by purely theoretical men, yet the weight of evidence is in favor of the man with experience.

One road to improvement in the matter of education will be found in encouraging the reading habit among the men in your employ, and if they decline to subscribe to one or more of the various horticultural periodicals it may prove a good investment for the employer to make a few extra subscriptions each season and distribute the papers among the men.

And in conclusion let me add, that while the present condition of our business is not entirely discouraging, yet it seems that the more general adoption of the three points of (1) *systematic work*, (2) *organization*, and (3) *education* would tend to improve and elevate it, and with this suggestion I leave the subject to the wise consideration of the society.

The discussion was participated in by Messrs. Seidewitz of Maryland, Hammond of New York, Spaulding of Connecticut, and Storm of New Jersey.

This was followed by the exceedingly interesting and instructive essay of Mr. F. Schuyler Matthews of Boston, who also gave practical illustrations by means of a chart and numerous sheets of colored papers, showing many minute variations in what are usually regarded as exactly similar shades of color.

Comparative Colors and Their Relation to Flowers.

BY F. SCHUYLER MATTHEWS, BOSTON.

One of the strongest elements of beauty in nature is her colors. As time goes on the people of our country show an increasing interest in pictures which are full of color. We are past the age when steel engravings were popular, and it is not probable that there will be any revival in this department of the engraver's art.

How far the beauty of color in flowers has exerted an influence in this change from monochromatic to polychromatic

art I am not prepared to say, but I believe flower colors have had more to do with this matter than we are prone to think. It is only within the past twenty years that the florists have put before the eyes of the public the magnificent pure reds of carnations and the glorious magentas of the cinerarias. What influence this must have had on the city people who do not possess garden plots it is not easy to say; but that the florist through his flowers has been a potent factor in nurturing a love of color it is reasonable and wise to believe.

But this growing fondness which we indulge in for color sometimes outstrips our knowledge of its character. We have no reliable nomenclature of color tones, and we resort to nature at once for a color name which scientifically does not exist, as, for instance, peacock blue, cherry red, sulphur yellow, pea green, crushed raspberry and old gold. We go jumping about among natural objects for similitudes in color, and we do not locate our colors in the rainbow tints.

I would like to call your attention therefore to colors as we may find them related to each other in the prismatic condition. I regret that pigment color, all I can refer to directly, is so dreadfully lacking in purity and brilliancy, but at the same time it must be borne in mind that color is color the world over, and there is no color in the prism which cannot be adequately represented by pigment color.

The most remarkable thing about nature's colors, however, is their purity. Flowers possess the next best quality of color to that which we see in the rainbow. I must refer to several splendid flowers which illustrate this truth perfectly: Prince of Orange calendula, Portia carnation, Empress of India nasturtium, Madame Crozy canna, lemon colored marigold (African), purple cineraria, violet blue morning glory and New Cardinal poppy. These flowers show the most extraordinary brilliancy in such colors as orange, pure red, vermilion, pure yellow, pure purple and violet. The pigments of the artist's paint box which go by the same names are not comparable with them. If I were to use bits of petals of different flowers and connect these together in imitation of the prismatic colors I would have no difficulty in finding colors brilliant enough to match the rainbow. The color fire might be gone, but the color purity would remain. A dial with sixteen radiating colors made up of the flower petals could be completed with the exceptions of pure blue and peacock blue and green. These are colors which it would be extremely difficult, if not impossible, to find in Flora's world. I might specify the sixteen hues as follows:

Pure yellow—purple;
Green yellow—magenta;
Pea green—crimson;
Emerald green—pure red;
Peacock blue—scarlet;
Pure blue—pure orange;
Ultramarine blue—yellow orange;
Violet—golden yellow.

The colors as they are printed opposite to each other are what we term complimentary hues, that is they form a full and complete color when mixed together, which we call white.

In bringing this subject before you of color for comparative examination I shall try to show how colors can be recognized in their individuality, and how we can avoid confusion in the use of color terms. It is of course a matter of education in

training the eye so it shall distinguish between tints of similar character; but provided one is not deficient in their color sense, so they are more or less color blind, it is not difficult to present a few simple colors in such a way that one may easily recognize them ever afterward.

Scarlet is a red color which is characterized by a tincture of yellow. The ranunculus poppy gives us splendid scarlets; the New Cardinal poppy, one which I may locate as having come to me from Mr. W. Atlee Burpee, is a scarlet flower with a minimum amount of yellow in its composition, and a most remarkable character of lightness and purity of tone. There is positively no ranunculus poppy which can give us the same color; and indeed, I know of no other flower which will approach it in clearness of hue. I have long since analyzed the color of the Madame Crozy canna, and found it an incomparable scarlet; but the character of the color is entirely different from that which we see in the poppy which I mention; it is heavy and has a surface brightness with no depth all. A very different flower is the King of Tom Thumbs nasturtium; here is a fiery scarlet flower which I cannot copy with any pigment in my paint box; you would smile at the brick dust appearance of my best scarlet vermilion beside the glorious intensity of this nasturtium's petal. A step further in intensity of color and you have the nasturtium Empress of India, a scarlet red of great depth, which I am also powerless to reproduce with my paints.

So much for scarlet; but red in purity of tone it is not; this must be borne in mind. I have referred to the poppy family as possessing some splendid scarlets; I might as well include the nasturtium family, as it is capable of giving us scarlet in all its intensity and paleness. But the difference between the two families as regards red is wide; poppies give us a pure red in a more or less dilute condition, but the nasturtiums are absolutely incapable of producing anything like red in purity of tone. It must not be supposed that the rose nasturtium is an example of pure red even in a qualifying degree; this flower is dilute red scarlet in color tone, so far removed from purity that there is about twenty per cent of yellow in its make-up.

In the balsam and the phlox families there are no scarlet reds, and as far as my knowledge goes nothing which remotely resembles them. The so-called scarlet Phlox Drummondii is a pure red flower with no trace of yellow in its composition. I regret constantly the misuse of the color term scarlet; the seedsmen's catalogues are full of the word, when what is really meant is only a bright red color. I am glad to see that in the Century Dictionary, so recently published, the proper and scientific definition of specific colors is given; the position of the colors in the spectrum is explained, and at once anyone may discover by experiment the individuality of a color of a certain name. As an example of this one may find that scarlet is a red so near the yellow division of spectrum color that it is distinctively a yellow red and not a bright red.

My salmon rose Phlox Drummondii has an ineffably pale pure red pink color with a suspicious yellow inclination; but after careful examination I have been forced to the conclusion that there is not a particle of yellow in the expanse of the dainty petals. What the seedsmen would undoubtedly call rose pink in color would be crimson pink. I have a lovely pure pink flower among my Shirley poppies, but I have never seen a crimson pink or a

pure crimson poppy in any variety of this flower. Crimson is too often a word loosely used; it does not mean dark red, *that* is maroon; it does not mean deep intense red, *that* is pure red perhaps, or a red with some touch of yellow in its composition; but it *does* mean a deep red near the blue division of the spectrum; and consequently crimson must be a blue red. I have crimson zinnias, sweet williams, petunias and silenes, but I have no crimson poppies.

I wish there was time enough for me to say many a good word for the too often despised color called magenta. But I can only say this: Not until the florists discovered the wonderfully deep colored cinerarias and gave them to us in a profusion of magnificent bloom did we understand how magnificent magenta could be. The artist who is a colorist and who could learn nothing more about purple reds at an exhibition of cinerarias would be dead to color influences indeed, and what is more, the florist who exhibited the flower would be proved the greater man as far as his æsthetic sensibilities are concerned. But I am sure that it is not the artists who are prejudiced against magenta. I could prove that by the recitation of half a dozen facts about as many famous artists. It remains, however, for the florist to persevere with his splendid magentas, until he gains the victory over unreasonable prejudice and convinces the public by orchid and cineraria that purple red is a grand and dignified color above the disdain of those who delight in unrefined and flashy scarlet geraniums.

Magenta is the contralto and baritone scale of the music of color; it is too rich and deep when seen in all its purity for any but colorists and lovers of color to understand. I believe the florist has gauged the value of the hue in the presentation of it in his glorious cinerarias, and evidently its rich and uncommon music struck his ear long before it had any effect upon the young ladies who like to paint wild roses and poppies. It is not always the smallest ears and bluest eyes which distinguish the beautiful in manifold nature.

As a representative orange flower I might point to the Prince of Orange calendula. But orange is a color easily recognized by anyone; there is little chance of its being misnamed. It is only the orange reds which are confusing in their variety. There are orange red poppies; the scarlet runner is orange red, so are some of the geraniums and zinnias. Orange vermilion or orange scarlet are two names for the same color, either of which will do very well; but they are not so often used in the seedsmen's catalogue as they should be.

Pure yellow is a color which in its exact tone is not so easily recognized. Sulphur is a pale pure yellow. But sulphur colored flowers are not so very plentiful as the catalogues would persuade us to believe. There is no sulphur yellow among calendulas, phloxes, nasturtiums or gladioli. The buffish tone of the Pearl nasturtium is rather straw color. Wild mustard in its paler tints is much nearer sulphur. The outside of buttercup petals is quite a pure yellow, but the shiny inside surface reflects the color to an intensity which approaches golden yellow. The wild evening primrose is quite a pure yellow flower. Coreopsis is golden yellow and never approaches a pure yellow tone. The sunflower never shows a sulphur yellow, nor is there any rose I know of, not even excepting the

beautiful yellow Scotch rose, which gives us an absolutely pure yellow.

The true green is really what among our pigments in the paint box we call emerald green; this occurs rarely in nature and I cannot cite any instance of it worth mentioning, unless I refer to indirect color effects in spring time landscapes. A green-blue or even a pure blue flower does not exist; one-half of the flowers called blue in the catalogues is not deserving of the name. Such flowers we artists would employ purple paint to copy. I know of no blue aster. Bachelor's buttons are pretty blue, so is wild chicory. But I would be compelled to use ultramarine to truthfully copy either of these flowers. The blue of some of the Colvolvulus minor is charmingly bright and has little purple in its composition. The ultramarine of certain deep hued morning glories is rich and true to the color name.

I am perfectly well aware of the fact that a florist or a seedsman must use color names generically, so to speak; so the blue aster and the yellow rose are admissible speaking of these in a general way; but it seems to me specifically the blue petunia, the sulphur nasturtium, calendula, balsam and phlox; the scarlet phlox and balsam, the sky blue aster, the crimson poppy and the scarlet aster are non-existent. There is no art of the horticulturist which will induce certain flower families to take on any positive color which is new to them. I think I am correct in making this broad assertion. I allude to specific color, and I am sure that the nasturtium is incapable of absolutely pure yellow.

The green petunia which I have raised with great success is a well named flower, although the best I can do is to show a specimen with only seventy per cent of the petal surface green, and this not emerald or true green, but the generic green. No one can possibly object to such a name, nor is there anything wrong in the name black scabiosa. These are both color names which are absolutely true to color effect. But the scarlet balsam has no excuse for itself on any ground, for reasons which I have already stated.

As regards the various tones of pink and red in roses I have only a word to say now. Already I have written much on this subject, which has appeared at different times in the AMERICAN FLORIST. The pinks in roses are generally compounded colors, that is, they are made up of a variety of delicate tints which can only be readily distinguished under the microscope. There are pure pink roses and yellow pink roses. The comparative examination of the petals of roses with some of the annuals which I have just mentioned will locate the color of a certain rose without mistake. The rose glories in deep crimson and in pale crimson tints, but with scarlet it has nothing to do.

The beautiful reds and pinks and yellows of carnations it would take too long to describe here with an approach to justice. I consider the carnation the prophet flower of pure and intense reds. The flower is weak in yellow color, but its pinks are incomparable in brilliancy. The Grace Wilder's color is pure and even; not the best of my Shirley poppies nor any of my phloxes can stand beside it. The Portia's red is beyond the red of any other flower in my garden except it be that of a certain gladiolus.

Regarding the broken tones in flowers, I would like to call attention to several: The Heinemann nasturtium, a golden brown; the Edward Otto nasturtium, a purplish brown; the Cyclobothra flava,

a russet yellow daintily broken in tone. Then there are a number of maroon pink poppies in the ranunculus division, which I take great pride in growing; but I must complain that the seedsmen do not separate these from the swarms of scarlet and rich red flowers which interfere with the æsthetic tones of the maroon pink ones. So much interest was taken in the Louis Boehmer chrysanthemum, particularly with regard to its fine color, that I wonder the seedsmen do not make an effort to group together these odd colored poppies and make it easy for amateur gardeners to become well acquainted with them. The taste for æsthetic color is growing, and the day will come when magentas, toned solferinos, plum purples and purple browns in their more delicate tints will be fully appreciated and admired.

But color is an infinite thing and its consideration here in connection with flowers must be greatly limited. I repeat that flower colors are so far beyond pigment colors in brilliancy, and their variations are so innumerable, that it would take volumes to describe the differences and infinite patience to pursue the subject to a broad and profitable conclusion. We have yet to learn a great deal about color; not even the artist can fathom all its depths; certainly the best study of it is in the flower garden, and we owe to our florists, horticulturists and gardeners a great debt of gratitude for their revelations of the most magnificent colors the world has ever seen. It is not on the artist's canvas, but in the gardener's flower, that the greatest wealth of color may be seen.

The essayist was greeted with applause, and at the conclusion of his paper was given an ovation. Votes of thanks were tendered Messrs. Mathews and Taplin for their papers.

Under the head of the question box the relative advantages of the one judge and three judge system in horticultural exhibitions were presented by Messrs. Rawson and Wood, both favoring the latter system.

Useful commercial cut flowers other than roses, carnations and chrysanthemums was the theme of a question replied to by Mr. Scott of Buffalo, as follows:

Cut Flowers Other Than Roses, Carnations and Chrysanthemums.

[Answered by Wm. Scott.]

This question referred to me is in my thinking, a little ambiguous, but if it means what other flowers are there for the commercial florist to grow then the answer would be simple, but necessarily very lengthy, for it would include all the flowers that are sold in our greenhouses and gardens except the three above mentioned. It can, I believe, be put down as an indisputable fact that the rose and carnation are the most important flowers, both commercially and any other way, but the chrysanthemum I should not place third. It has sprung within ten or twelve years, into great popularity, but its season at the most is short, and prices have taken a great tumble during the past few years. I must most decidedly place the violet in advance of the chrysanthemum as a commercial flower, for the aggregate paid by our patrons during the year is far more than that paid for "mums," however large, gorgeous, and fantastic they may be. So we will have to call the violet the most important, after the rose and carnation. It is certainly true that it would be impossible to

run a retail trade without growing or keeping roses, carnations, and in their season chrysanthemums, but here is a brief list of other flowers used largely in our business. Even if only for variety's sake they must be grown.

First violets, of which I have already spoken. Second, lily of the valley; this little gem is asked for the year around by our best flower buyers, and if you are successful in forcing it and retarding it there cannot be anything yielding a larger percentage of profit. Third, tulips, narcissus and hyacinths; immense quantities of these have been forced during this last fifteen years, perhaps slightly overdone this last three or four years, yet they never can go entirely out of fashion, because they can be had at a relatively cheap price, when roses to make an equal show would cost the purchaser three times the amount. Fourth, *Harrisii* and longiflorum lilies; a continual succession of these can be had from November to July, and are now in a general trade actually indispensable. Fifth, *Lilium lancifolium* in variety and *Lilium auratum* are every summer coming more and more into use, and are now as indispensable in July, August and September as the *Harrisii* are in the earlier months. Sixth, mignonette is a very important crop and a paying one; many thousand feet of glass are devoted to its growth in winter and spring. Seventh, orchids, they may not be considered an absolute necessity to the general florist, but a collection composed of a dozen of the best species and varieties will well pay for the outlay, and where they are grown largely in any establishment there is a steady demand. "A story." Eighth, sweet peas are now forced by many, and in the months of March, April, May and June they are in great demand, and a paying crop.

I will not attempt to enumerate many more, but likely enough I have forgotten more than one prominent and important flower to the retail florist; there is a number of flowers which enter into his business, and which you all know, and for a cheaper grade of custom you have to grow more or less of them. There is the zonal geranium, begonias, sweet alyssum, heliotrope, stevia, eupatorium, ten week stocks, pansies and many others familiar to you all. I had almost forgotten two important plants; the poinsettia with its brilliant bracts is one, in many cities they command a most remunerative price. The other is the old calla lily which most of you can remember as long as you can any plant.

If you are the fortunate possessor of a few acres of good land within driving distance of a large town you can make a comfortable living with a few acres cultivated to flowers. It is the natural and healthy way to exist, and in addition to the flowers you can keep a flock of chickens, cows, pigs, and ducks, some of whom will be producing a crop when you are sleeping.

Mr. John N. May offered a resolution of condolence with the bereaved family of the late treasurer, M. A. Hunt, and suitably expressing the society's appreciation of the deceased, which was adopted by a rising vote. As a further mark of respect for the memory of the late treasurer an adjournment was ordered.

Wednesday Morning Session.

Pittsburg was unanimously selected as the place of meeting for 1895. The nomination of officers resulted in the naming

of the following: For president, Edwin Lonsdale of Philadelphia; Wm. Scott of Buffalo; for vice-president, E. C. Reine-man of Pittsburg; for secretary, Wm. J. Stewart of Boston; for treasurer, H. B. Beatty of Oil City, Pa.

On motion of J. G. Esler of New Jersey the appointment of a committee of three was authorized to report to the next convention a plan for a closer union between the national society and the auxiliary societies. Mr. John H. Taylor then read his essay.

The Best Method of Growing Roses, and the Best Varieties for Present Demands.

BY JOHN H. TAYLOR, BAYSIDE, N. Y.

The growing of roses under glass has been so thoroughly discussed at our conventions in the past that I thought best to treat this subject somewhat broadly, and touch on certain points of culture, past and present, especially relating to the health of the rose.

The tendency of growers during the past few years has been to disregard one of nature's laws, that of rest. All plants require a dormant or semi-dormant period, as is well known to horticulturists; but the system, at present pursued, that of constant forcing, has weakened the constitution of the rose. It is impossible to obtain a healthy cutting from plants whose vitality has been sapped year by year by over forcing or disease.

Plants adapt themselves to changes of climate, treatment and locality, providing this occurs gradually and nature's laws are not transgressed. By judicious selection and propagation a race of plants can be made healthier, more vigorous, and better adapted to the purpose intended. On the other hand, injudicious and over-propagation will, if continued, bring forth a race of weakly and sickly plants incapable of producing or reproducing.

Littlejohn's methods of growing have been discarded for newer, and what is considered, better ones! Undoubtedly for a few years better financial results were obtained, but at a cost to the health and constitution of the plants. The old method was to grow the plants from good wood struck early in the fall, which would by spring produce strong vigorous plants in 6 or 8-inch pots. These would be plunged outside, thoroughly hardened, and brought into the house in August or September. They were then either planted or potted in 10 or 12-inch pots and allowed to flower, giving a fine crop by Oct.

The finest lot of plants I think I have ever seen was at Mr. Haughouts in the month of August, 1883, plunged outside in 8-inch pots. They were *Perle des Jardins*, averaging about 15 inches high with from six to eight strong, well ripened shoots, ready and anxious to flower. The house stood empty, but thoroughly cleaned, and the soil had just been put in the benches.

There are probably few present who have not seen such plants, and remember when Madison, Summit and neighborhood was the Mecca of all rose growers. But this proved too slow and expensive for our advanced ideas, and the constantly increasing competition; so that the present method of planting in June or July, plants struck from our overforced stock, and having had no rest or ripening of the wood, has been generally practiced. The consequence has been a more or less general depreciation in the strength of our plants, and so many diseases attack them that a chemist is required to be constantly on hand.

A HOUSE OF BRIDES PHOTOGRAPHED LAST JANUARY.

MR. JOSEPH HEACOCK'S GREENHOUSES AT WYNCOTE, PHILA., PA.

These facts impressed me several years ago, as I noticed a gradual weakening in the vigor of my plants. I decided not to propagate more than was required for my own use, to use nothing but the best wood, and also to rest my roses during the summer months. The result has been more than satisfactory, as my plants have shown year by year more stamina, and have been less subject to disease. The carnation men have already discovered their error, and a number of growers are now propagating their stock from *unforced* plants. Diseases of all kinds are ever present, either in the shape of fungi or insects, and whenever a plant becomes weakened by improper treatment it is at once attacked. It is so well understood in animal life that a man who disobeys nature's laws succumbs shortly to the ever present disease, and yet we do not hesitate to treat our plants to so weaken their constitution that they are unable to withstand the attacks of their enemies.

Having this object in view, namely, the production and growing of vigorous healthy stock, what are the best methods to pursue?

To strike the cuttings in November and December plants should be carefully grown during the winter, and by March or April should be strong plants in 6-inch pots. They should then be given all the air possible inside or plunged outside, and kept on the dry side, thus giving a slight rest and ripening the wood. Planting can be done in June or July. The plants should be handled so as to get thoroughly rooted in the bed or benches before being allowed to flower. Plants

thus treated should be strong dwarf bushes ready to flower as soon as allowed in the fall. The fall treatment of roses is of the utmost importance, as on that depends success or failure during the winter; for a rose once checked at this period will never recover sufficiently to pay during that season. Temperature at night or day during October and November can not be strictly adhered to, as the weather and judgment of the grower must regulate what he considers best adapted to the welfare of the plant.

Watering must also be very carefully looked after then, more so than at any other season; and it is a good rule to keep the plants a little too dry than too moist. More trouble is caused by careless or overwatering at this period than at any other. In fact the quality of the flower in the early fall should be secondary to the welfare of the plant. As a rule a higher night temperature should be maintained than is conducive to the production of the best flowers. In other words, in September our nights frequently run as high as 70° or over, and the plants should be gradually accustomed to a lower temperature without checking their growth in the two following months. No absolute rule can be laid down, as different seasons require different treatment. As a rule, however, a warm fall will require a higher night temperature than a cold one, owing to smaller amount of artificial heat needed. Once safely in December, the plants, with ordinary care and treatment, should produce good results for the balance of the winter.

The question of beds and benches is

still a mooted one, both systems having their advocates. I am using both, but am not prepared to say which is the better one. With pipes run through the beds in stone ducts the soil in the beds can be kept at any required temperature. From experience I have found 75° about the best temperature. The hybrid teas seem to flower more freely and do not have the tendency to go dormant as when planted in benches. Another method, which is a combination of beds and benches, has given the best results, namely, to board the benches in and have separate pipes underneath for warming the soil, the pipes for heating the house being placed along the sides of the greenhouse, so that the warming of the soil can be done independently of heating the house. The advantage these beds have over benches is that of durability; and I am satisfied as good results can be obtained if properly handled.

The question of carrying roses over one or more years has always been a favorite topic of discussion, and is still an interesting one. It has been my custom always to carry over about half my plants, and my experience has been that the old ones can be more depended on to do well than the young plants.

The method pursued is to withhold water gradually, beginning the latter part of June, until the beds are quite dry; after that the house must be carefully watched to prevent the wood from shriveling; syringing should be done daily, and in very warm weather twice a day. Should signs of shriveling appear a slight watering must be given, but not enough to start the buds. By the middle of

August the plants will be ready to prune. All but the best wood should be removed, and the other shortened down to from six to eight inches from the bed. A thorough watering should be given as soon as the cuts are healed, then remove all loose soil and give mulching of half soil and manure. Air, night and day, should be given until the foliage appears hard and dark green. I have a house of Brides treated this way which has been running five years, and is stronger and healthier this year than ever. The base of the stems will measure from one to two inches in diameter. I shall run it another year. Plants treated in this way have their first crop in October, which is as early as good flowers can be obtained. This treatment gives the plant a period of activity and one of rest. The soil by being dried is sweetened, and the fresh soil added gives all the necessary stimulus.

Like all other horticultural operations, great care and judgment is required from the time of drying until the plants are once more growing vigorously. Too rapid drying or too rapid a start may cause absolute failure.

The following figures taken from the production of 2,017 plants of Brides show the results of the above system:

1st season, 1890-91, flowers cut	46,575
2d " 1891-92, " "	77,231
3d " 1892-93, " "	74,069
4th " 1893-94, " "	94,409

Total for four years 292,284
Average per year 73,071

The fourth year shows double the cut of the first year with young plants.

In considering the best varieties to grow several questions must be considered.

The market requires as perfect a flower as can be produced; in fact, competition is so great that only the best can be sold to advantage. Color, size, foliage and keeping qualities all have to be considered. Again, from a producer's standpoint a rose must be vigorous, floriferous and able to stand handling and transporting. So far very few roses among the thousands introduced possess this quality, although great advances have been made during the past years, and judging from the past few years even better varieties for forcing will soon be forthcoming. In fact a great field is open to the hybridizer in this country.

The varieties to be had at present are the following: American Beauty, Svn. Mme. Ferd Jamain. This rose is probably the finest so far introduced.

The Bride is the best white.

Bridesmaid has superseded C. Mcrmet, and is the most satisfactory pink rose yet introduced.

Meteor splendid in color but lacking in fragrance, and in cloudy weather has a tendency to come dark in color and deformed in shape.

A good red rose is badly needed.

Perle des Jardins is still the best yellow, and in some localities one of the best of all teas.

Mme. Hoste is remarkably prolific, and when well grown resembles in shape, size and color Cornelia Cook. A few can be profitably grown.

Mme. Cusin has been badly hurt by the Bridesmaid, but still can be considered as a profitable rose to grow.

Mme. de Watteville, although a beautiful flower and very productive, has proved such a poor keeper in a warm room that the public no longer ask for it.

Kaiserin Augusta Victoria has proved for winter work a great disappointment, as it has a tendency to come green and

keep poorly. In summer it is the best white introduced.

Mme. Testout is still in doubt. The color is beautiful, but it is a poor keeper and shipper.

Papa Gontier has been badly hurt by Meteor, and owing to its short season is now no longer profitable to grow.

Mrs. Whitney is still to be tested. It promises well but lacks substance. A great future should be in store for this class, as it combines fragrance, color and productiveness.

La France, except for summer work, can no longer be classed with the other good pinks.

For all purposes the following are probably the best roses to grow:

Pink,.....	Bridesmaid.
White,.....	The Bride.
Red,.....	Meteor.
Yellow,.....	Perle des Jardins.
Deep pink,.....	American Beauty.

It would appear advisable to select the best one in each color than to grow several shades of any color. A still further advance towards more perfect flowers might be obtained by making a specialty of one or more roses, that owing to soil, treatment, or other causes, appear to flourish best in any one locality. For instance, Mr. Nash, of Clifton, is known principally as a Beauty grower; Mr. Pierson, of Scarborough, as a noted grower of Meteors; Mr. E. Asmus, of Hoboken, as a very successful grower of Mme. Cusins, etc.

This list might be considerable lengthened, but I have probably exhausted your patience even on the subject of the queen of flowers.

After discussion by Messrs. Tesson, May, Simpson and Gasser Mr. Samuel Goldring, in the absence of Mr. Mathews, read his essay on "Orchids," as follows:

Orchids from a Commercial Point of View.

BY WM. MATHEWS, UTICA, N. Y.

When asked by our worthy secretary to prepare an essay on orchids from a commercial point of view the question flashed through my mind why so many people engaged in floriculture made exceptions to the orchid, and at the same time attempted to grow so many trashy things that are much harder to grow and dispose of than the product of the orchids that are suitable for commerce. Go east or west, you can most generally find many poorly grown marantas, dracenas, crotons, etc., and a host of other things that are of no beauty or utility, unless very well grown, and to grow them well requires both skill and perseverance. Generally speaking, should a gardener ask the proprietor of many of the beautiful conservatories that can be found in almost every state of the union for a line of hothouse and greenhouse plants, no matter if they cost double the price of good orchids, there is no refusal. The plants are obtained and many of them are often useless and unfit for the position in which they are placed, and are much harder to bring to a state of perfection than a large percentage of the orchid family would be. Nevertheless, there seems to hang around the name of orchid a warning not to touch them, and a feeling pervades many otherwise good gardeners that orchids are very troublesome and hard to grow, when in reality with a minimum amount of care they are the most reliable and easily grown stock that is embraced in the whole category of floriculture.

Some orchidists will persist in saying

that orchids for commercial purposes can be counted on the fingers of one's hand. To this dogma I emphatically say "No." Should a grower confine himself to five species I am certain that in a few seasons he would find the grower who grew a good range of species and varieties would soon outdo him. The beauty of orchid flowers, I feel free to say, is much increased by grouping several varieties together; at the same time I do not decry a display of one variety, whether cattleya, odontoglossum or phalaenopsis. I do not know of anything that appeals to a really artistic taste so much as a well arranged stage of orchids, intermixed with fine ferns, etc. Unfortunately many of the most beautiful orchids have very ordinary foliage; if the foliage of the orchid were as ornate as their bloom then they would be grand indeed.

Commercially the orchid has scarcely gotten a foothold in this country yet, but the time I am sure is not far distant when they will stand commercially in America in as good a ratio as in European countries, and there will then be few large decorative events where the orchid will not be present, not to the injury of other flowers, but to their benefit. If in a decoration one mantel is ordered banked with orchids the other one must necessarily be more gorgeously banked with other flowers by way of comparison. Then again, if you have a commercial stock of orchids, you have always something to help you out. There are times, just like at the present writing, when your rose stocks "off crop," carnations scarce; then you can fill the order with orchids, much to the pleasure of your customer and profit to yourself. There is another good feature, if you do not want to use the bloom you have out to-day they will be just as good one to three weeks hence. So it is very rarely you lose any orchid bloom even when you are consigning hundreds of once beautiful roses to the waste barrel.

I have always found that when roses are very plentiful and cheap nobody wants them. What buyers there are in such times are looking around for some "tidbits." This is another instance where the orchids will come into play to the pleasure and satisfaction of both florist and customer.

Now I have no doubt that you will consider it a bold assertion when I say that the orchid gives me less trouble than any other branch of floriculture I am engaged in. In our rose houses we kept fire till about the 5th of June. In our orchid houses the fires were let out about the 15th of April, and not started afterwards, removing a few plants, such as phalaenopsis, a few dendrobis and things that required strong heat, to a palm house, where a gentle fire is kept during the summer. Experience has taught me that there are more orchids killed by coddling in a close atmosphere than by anything else. There is no plant that delights more in a fresh and pure atmosphere. I never think of closing ventilators, top or bottom, on my cattleya houses after about the 15th of April, according to season as to date, even if the temperature should go down to 48° or 50° in the early morning, unless a strong cold wind should come up, then the ventilators are shut to prevent a cold biting draft going through the houses.

I suppose, commercially speaking, the grand and main point at issue is the "great and almighty dollar" that is unfortunately so dear to the hearts of most of us, even if we are engaged in one of the most pleasurable occupations on

earth. I will confess to the fact that the outlay for a large quantity of orchids will be large in comparison with roses, carnations, etc. At the same time it is a fact that a large quantity of orchids can be bought for a little money, but this grade of stock would be unprofitable and disappointing, for, although it is only a few years that the bloom of orchids have been on sale in public stores, yet it is remarkable how discriminating and esthetic are the tastes of American ladies in the purchase of those charming flowers. I have experienced this so much that I have concluded that a poor form or color of cattleya, odontoglossum, etc., shall no longer find a place in my collection, the order being that such stock be at once relegated to the waste heap. In every importation there will be a certain percentage of such useless varieties which would be dear in a gift. In orchids as in all other commodities those of a good quality are the cheaper, and I do not hesitate to say that a collection of orchids, well selected and good healthy stock, will prove as lucrative as any other branch of floriculture, but I would strongly persuade intending purchasers to buy good strong stock, whether from the woods, or already established plants. I am confident that at present prices no one need fear purchasing established stock. I think it will be cheaper for them if the labor, anxiety and other contingencies are well considered. They will bring a quicker return than stuff from the woods with all the risks, and there are many. Thousands are imported yearly that have either been superheated or sea washed. If you should get a dose or two of this kind of medicine, as I have, it will tend to dampen the ardor for orchid culture, especially if it should happen at the commencement of your orchid career. I have bought cattleyas at fifty cents dry. I have bought the same varieties established at \$5. Those at \$5 brought the price of plant back and \$2.50 profit in six months. The fifty-cent one was not at any time in two years worth more than a dollar, flower and all included. So I would strongly advise anyone commencing orchid culture to get plants of the best quality obtainable, even if he did not get so many. I have lately had communications from collectors, and they say that it is impossible that orchids can be collected and sold as cheaply as at the present time, as they have to climb much higher up the mountains, which means additional expense.

It is the opinion of lots of gardeners that orchids soon get worn out. That is very true, and we see the same condition in all branches of plant culture. Too often has it been my experience to see a once choice lot of orchids either steaming or frying in some out of the way corner without ever having been treated even to a pot washing. I have seen what were once fine specimens of cattleyas and vandas standing in the same pots and position year after year, potting material rotten, plants covered with scale, and those who have charge of such stock are the very fellows that cry "wolf" and warn many intending purchasers to go light on orchids, and confidently advise and declare that the orchid is a hard one. I have a house of cattleyas that contains a number of plants once owned by the venerable Isaac Buchanan of Astoria, purchased about 1883, and which doubtless had been in his possession a number of years previously. Those plants are in perfectly healthy condition, and bear a fine crop of bloom annually. I have also plants from the late Dr. Wolcott's collec-

tion, Mrs. Morgan's and others that have been in cultivation about 25 years. Those plants are to-day in fine, healthy condition. I think these few remarks are enough to show that orchids, if well established and kept in clean healthy condition, are as safe and paying a stock as one can invest in; but improperly cared for and carelessly and negligently handled, they, like all kinds of choice plants (excepting none) will prove a losing investment; but I do claim that more of the orchid family will stand abuse and improper culture better than any other kind of stock I am acquainted with.

In conclusion I would say that it is a lamentable thing to see so many wealthy people living in luxurious homes surrounded by fine plant houses, the latter costing from \$5,000 to \$10,000, which do not contain \$500 worth of choice plants of any kind. Often this is the fault of the man in charge, who is either too lazy or too ignorant to care for anything better than a few trashy common things, which, by the way, should be furnished by the local florist or plantsman. I have reference to such things as geraniums, coleus, etc., etc. If we had better gardeners we should soon see more houses of choice stock that would be immensely gratifying to the proprietors of such places and at the same time create a demand, and encouragement would spring up all around that would be both beneficial and profitable to the trade, and a credit to this glorious country.

It was discussed by Messrs. Lonsdale, Goldring and Anthony.

Wednesday Afternoon Session.

The afternoon session opened with the reading of the essay on "Cannas" by Mr. J. T. Temple of Davenport, Iowa, which was followed by a very interesting talk by Mr. Grove P. Rawson of Elmira, N. Y., on "The evolution of the chrysanthemum."

On conclusion of the address the appreciation of the members was expressed by a rising vote of thanks. This was followed by Mr. Tricker's paper on "Aquatics" as follows:

Aquatics.

BY WM. TRICKER, CLIFTON, N. J.

This is a progressive age, and as floriculture is making rapid strides it behooves every florist to keep abreast of the times. During the past decade much has been accomplished in our profession; many additions have been made to the list of useful plants for general decoration and for cut flowers; the increasing interest in the cultivation of the rose and carnation has resulted in the formation of a carnation society, and later, a rose society; but no one dreamt ten years ago there would be a chrysanthemum society. The introduction of the chrysanthemum as a florist's flower was an innovation, and many considered it only fit for Chinese and Japs; but the stately Queen of Autumn is with us still in all her splendor. More can be said of the wondrous increase in the demand for palms, ferns, ornamental and flowering plants for decoration, and what shall we say of the change in our public parks, gardens, and cemeteries; the millions of plants grown annually for their embellishment, and for private gardens, from those of the millionaire to the small plot of the mechanic, how many millions more? This is a vast field for the florist, and floriculture knows no limit.

Aquatic gardening is apparently in its infancy, though aquatics are as old as the hills, but this class of plants now commands our attention. Aquatics are associated with the history of the ancient Egyptians, where mention is first made of the Egyptian lotus, *Nelumbium speciosum*; the worship of which was common with them. Sculptural representations of it are found among the ruins of Egyptian temples. It was not only known to the ancient Egyptians, but was common in olden times in East and West India, China, Japan, Persia, and Asiatic Russia. The Chinese have ever held it in sacred regard, but that character was not limited merely to ornamental purposes; the roots (or tubers) were used and still are as an article of diet. The American lotus, *Nelumbium luteum*, was well known to the Indians as an article of diet, but has of late been disregarded. This is a distinct species and must not be confounded with the Egyptian lotus nor Pharaoh's locust, with which we have been so familiar this year.

Nymphæas are also widely diffused, and are found in all parts of the world, each different country possessing species peculiarly its own. But of all the nymphæas no species can compare with *Victoria regia*, and although many species were known in England prior to the introduction of the latter, the cultivation of aquatics received a stimulus thereby, which extended to the United States, the effect of which is felt by us this day. The discovery of this wonderful plant by Mr. Bridges, an English traveler, in 1845, created such an enthusiasm as nearly cost him his life. His first impulse was to obtain specimens of the flower, and he would have attempted to enter the water, but was warned by the Indians who accompanied him that the stream swarmed with alligators; happily for him and us he lived to express his wondrous amazement of his discovery; he successfully carried to England the seed that produced the first plant, which became so famous. This was in the year 1849, when a tank was built expressly for the new plant in the great conservatory at Chatsworth, under the management of Mr. Paxton.

It is interesting to note that there were progressive florists in the United States at this date, although neither rapid transit nor ocean greyhounds were established, yet the result of such an achievement in floriculture was not only known here, but a similar tank and greenhouse were constructed, and the *Victoria regia* was successfully grown by Mr. Caleb Cope, Philadelphia, in the year 1851. Considering the time when the *Victoria* flowered in England—November, 1849—there was little time lost, and this act exhibited an enthusiasm and enterprise worthy of our day. The foregoing is the earliest record of aquatic gardening in this country. With the *Victoria* was also introduced *Nelumbium speciosum*.

The construction of the *Victoria* tank and house was such as to stimulate natural conditions. The warm water and tropical atmosphere were not enough; the water had to be kept in motion; a water wheel was constructed for this purpose, and a stream of water constantly flowed, which was conducted into a cistern or reservoir in the middle of the vegetable garden, which was used for watering in those days, before city water hydrants and hose were thought of. In this cistern the *Nelumbium speciosum* was planted and was a great success. After this small aquariums and ponds were made out of doors by differ-

ent people and aquatics were more or less grown.

It is sad to relate of this enterprising gentleman, as of many others since, that he died very shortly after this event, and that the glory and pride of this horticultural establishment thereafter departed. On this historical spot stands the Forrest Home for Aged Actors.

Yet another, a pleasing feature in connection with this first Victoria in the United States, and which makes this event most interesting. We have to-day at the head of the Department of Parks in the capital of the Union, a man of singular ability, experience and judgment, who was an employe in the gardens of Mr. Caleb Cope when the first Victoria and lotus were grown. I refer to Mr. Geo. H. Brown.

The state of Massachusetts appears to have been the next in order of date where the cultivation of the Victoria regia was engaged in; the earliest grower in that state being John Fisk Allen, of Salem, who on the 18th of June, 1883, exhibited a leaf of Victoria regia, four feet in diameter; on the 16th of July, one five and a half feet, and on the 4th of August, a flower, all at the rooms of the Mass. Hort. Society. Daniel Waldo Lincoln, of Worcester, was the next cultivator in Mass.; he had the Victoria soon after Mr. Allen, but the exact date is not known. The Victoria still led the way, and in the year 1856 it was grown in Cincinnati by Mr. George Pentland, gardener to Nicholas Longworth, Esq., but its cultivation did not become general, and would not now under such expensive modes of culture.

Attempts to cultivate *Nelumbium speciosum* are reported prior to Mr. Cope's venture. In 1839 it is stated by Hovey that *Nelumbium speciosum* was naturalized near Philadelphia, blooming abundantly all summer, and growing in a shallow ditch where it covered the surface of the water with its broad peltate leaves and strong flower buds, which expanded in all the splendor of oriental magnificence. The report was discredited by the Boston boys, who contended it was nothing more than the American lotus. However, the archives of the Pennsylvania Horticultural Society contain the following report (if not destroyed by fire): At the meeting held February 1840, the committee on distribution of seeds submitted their report, from which it appears two parcels of seed had been received; one from Calcutta, presented in 1838 by Dyllwyn Parrish, contained among other things seed of *Nelumbium speciosum* and *N. album*, and Mr. R. Buist succeeded in raising plants of these species, which were considered very rare in this country, if indeed they existed except from these Calcutta seeds.

From 1856 to 1876, very little was done in the way of aquatic gardening, but at the latter date Philadelphia was again to the front, and a plant of Victoria regia was a novel and attractive feature of the Centennial Exposition. About the year 1880, Mr. Sturtevant reintroduced *Nelumbium speciosum*, when it was planted in a pond near Bordentown, N. J. Here was the most successful attempt to naturalize this oriental species, which has astonished both the new and the old world. Mr. Sturtevant also succeeded in introducing several species of nymphæa, victoria and a full line of aquatic plants which were distributed to all parts of the United States.

About the same time Mr. Samuel Henshaw, of West Brighton, Staten Island,

established *Nelumbium speciosum* from seed sent from Japan by Dr. Hogg. In 1880 Benjamin Grey, of Malden, exhibited before the Mass. Hort. Society, *Nymphæa Devoniensis*, *N. cœrulea* and *N. dentata*, receiving an award therefor.

In 1883 Hovey & Co. and Mr. Grey exhibited nymphæa and in 1884 N. S. Simpkins, of Yarmouthport, entered the field.

In 1886 aquatics were introduced into Central Park, New York. *Nelumbium speciosum* is there naturalized and is one of the most striking features of the park.

In 1888 L. W. Goodell appeared on the scene with a tank of aquatic plants at the annual exhibition of the Mass. Hort. Society. A year later H. H. Hunnewell exhibited a collection.

Amateurs now commenced the cultivation of aquatics, and choice specimens were to be seen at Newport and in the neighborhood of Boston, Chicago and other cities. Mr. Chadwick, president of Chicago Horticultural Society, grew aquatics, which undoubtedly led to the introduction of these plants into Lincoln Park in 1888, then under the able management of Supt. J. A. Pettigrew. The cultivation of Victoria regia, as well as all available nymphæas at that day has given Chicago and her parks a world-wide reputation. Other parks and gardens have introduced aquatics with surprising results, and to-day they are the most popular plants. The Victoria has been grown in the Botanic Garden, Washington, D. C., and other southern states without artificial heat after planted out, and probably the first instance of such is recorded by the Wilmington, N. C., *Messenger*, when Dr. Bahnsen, after several attempts, succeeded in flowering the Victoria in the open at Salem, N. C. In most cases it has been only a partial success when attempted to be grown without artificial heat; it must necessarily be late in the season before planting out or run the risk of losing all (as is the case this summer at Washington). In many instances where steam power is used in factory, pump or for other purposes, the waste steam can be utilized for the heating of the tank, but the safest and best method is to have an independent heating system.

The introduction of Victorias into our gardens and parks opened up a wide field for the general cultivation of tropical nymphæas, which has now become general in most of our public parks; also by a large proportion of the wealthier class who own and maintain beautiful grounds. A few enthusiastic amateurs who grew aquatics for pleasure and recreation have done more for the advancement of this now popular class of plants than all the public institutions in the country, and it may safely be said that in no other country can such aquatic gardening be seen at the present day as in the United States.

In England, where every known variety finds a home, few, if any, growers have ventured to cultivate the tender nymphæas save in aquatic houses; hence it is very difficult to compare the same or to know the species by description of plants grown under glass with less light and solar heat, as given. The plants here are more vigorous, have more substance, and the color of the flowers and foliage is intensified.

Aquatics attracted the attention of foreign visitors at Chicago last summer, as well as many other visitors, and many received an object lesson which will be productive of good results.

It is very noticeable that, from very early date, in this as in all branches of horticulture, the true cultivator desired

to improve, if possible, original species, and as a result the first hybrid nymphæa was effected by Mr. Paxton, gardener to the Duke of Devonshire, at Chatsworth, England, in 1850. After it came *N. Kewensis*.

The first hybrid raised in this country originated with Mr. E. D. Sturtevant, and was named *N. Sturtevantii*; it is a flower of unsurpassed merit. M. B. Latour-Marliac surprised the world with his no less wonderful productions, which were exhibited at the Universal Exhibition, Paris, in 1889. These have gained a world-wide reputation, and have given an impetus to the general cultivation of aquatics, especially of hardy nymphæas in Europe and largely in the United States.

Among growers in the United States several natural hybrids have been effected by insects, which work is likely to be repeated where aquatics are grown in large ponds. One of the best selections of such is *Nymphæa odorata Caroliniana*. I had the privilege last year of presenting before the public at Chicago some hybrids which were the progeny of carefully selected parents. These are quite distinct and desirable varieties.

This assembly represents all the different phases of floriculture, cut flower and commission men, plant growers, wholesale and retail, in all branches. There is a growing interest in floriculture. Parks and gardens are public factors in this line and florists must grow various kinds of plants to meet the ever increasing demand for the embellishment of the home, the flower garden, parks and cemeteries; and swamps, bogs, ponds, now unsightly and in some instances nuisances, are destined ere long to become veritable Edens. The time is come when people not possessing a natural piece of water conclude they must have some kind of a water garden, and artificial ponds, tanks, basins are made to accommodate these charming and interesting water nymphs. This particular flora is represented at the present time by about fifty species, collected from all parts of the globe, and hybrids; also the Indian, Chinese and other lotus, and innumerable other aquatic plants.

Among the hardy plants are classed all nelumbiums, nymphæas, including the native species *N. odorata*, *N. o. gigantea*, *N. o. Caroliniana*, *N. o. rosea*, *N. tuberosa* and *N. t. rosea*; also *N. alba*, *N. a. candidissima*, *N. candida*, *N. pygmaea*, *N. Marliacea rosea*, *N. M. albidia*, *N. M. carnea*, *N. M. chromatella*, *N. Laydekeri rosea*, *N. odorata sulphurea*, *N. helvola*. These are all perfectly hardy, and once established take care of themselves as do the native species. They embrace the soft and delicate shades in color from pure white, yellow, pink, deep rose, and produce charming scenery with their pleasing foliage and enchanting flowers, associated with numerous water loving plants as iris, spiræa, variegated rushes, acorus, reeds, arundo, bamboo, typha, sagittaria, hibiscus, ornamental grasses, etc. But we must not omit the most gorgeous varieties of water lilies from the tropics, the pale to deep blue, or royal purple, the carmine and crimson. These are as easy to grow in the open in summer as is a coleus, with unquestionably greater results. The water garden is not complete without the Victoria regia, but at present this will not be extensively grown, though with a nominal outlay, or where a tank can be heated by the greenhouse plant, Victoria will be a wonderful attraction, and business men know what an attraction is worth.

In Mr. Washburne's absence his paper on violets was read by Mr. O'Mara.

Successful Violet Culture.

BY ANDREW WASHBURN, BLOOMINGTON, ILL.

This subject, of so much interest and importance to the members of this society, having been assigned to me for a reply, I have attempted with some hesitancy its consideration, mainly for the reason that others who grow violets successfully advocate quite different methods; therefore I shall speak only of the way in which we have found success.

We propagate our plants by a division of the old stool, not later than the middle of February, using only vigorous offshoots and discarding all plants having large and woody like stems; put in 2-inch pots, and grow in a cool house under the same conditions we give the flowering plants (which will be named later) and when well rooted remove to cold frames, there to become hardened and ready to plant in the field as early in April as possible.

We plant in the field in rows fifteen inches apart each way in good rich soil, and give frequent cultivation with the wheel hoe. During the summer the plants are kept free from weeds and all thin runners removed, care being taken not to remove the new growing crowns, so that by fall there should be enough bud producing crowns around the original plant to make plants from five to eight inches in diameter. Violets should be planted on well drained land, and at no time should be allowed to flag for want of moisture, or their vitality will be impaired and the plants become an easy prey to disease. We have found it necessary during our past dry summers to irrigate our plants, and to this we attribute largely our success.

The plants should be carefully lifted in September before danger of heavy frosts, care being taken that their roots be broken and exposed as little as possible, and planted in the houses in about six inches of good soil. This soil we prepare several months before it is wanted for use, and is composed of good loam and well rotted manure from the stables. After setting the plants should be thoroughly watered and for several days frequently syringed. At this time a light shading on the glass will be beneficial. We have sometimes used a clay wash which will be removed by the first good rain.

We have had the best success in houses about ten feet wide, running east and west with a wall in the center and tables on each side, built so as to bring the plants as near the glass as possible, and with provision for ample ventilation. The night temperature should be kept as near as may be at 40° to 45°, with a day temperature of from 60° to 70°. Higher temperature will lessen the formation of buds and encourage a growth of foliage. In cold weather much care should be exercised in watering, and the foliage should only be wet in the morning of clear sunny days; at other times, if needed, water only the ground between the plants. During the flowering season the plants should be kept free from runners, and all leaves removed that have passed their usefulness.

By this method of culture our plants have given an average of thirty to forty good flowers from October to March.

Of violet disease I am unable to speak, as we have never had it. Man in vigorous health is not susceptible to disease; good

sanitary conditions are necessary to good health, and as with man so with plants, they will respond to like conditions, and given an abundance of pure air, water, cleanliness and suitable cultural methods may we not hope to escape violet disease and still have success in violet culture?

Profitable Winter Blooming Plants.

[Answered by W. K. Harris.]

The question assigned to me to answer is "Profitable winter blooming plants." The question is a broad one, and gives no specific meaning. I suppose the inquirer meant plants grown in pots for the purpose of decorating conservatories, windows and other places on festive occasions. The word "profitable," in this connection, means that plants can be disposed of for more than the cost of production; or to obtain for them how much more, is a question for each individual to decide for himself. I desire more than some of my brethren, and having my desire gratified, I am enabled to meet my obligations more promptly than many of my fellow craftsmen.

From my standpoint of profit, there are but few varieties of flowering plants in pots that will pay to grow, and they must be grown in limited quantities. This branch of our business is on the wane. The demand has been growing less year after year for the past ten or twelve years. There was more demand fifteen or twenty years ago than there is to-day for winter blooming plants in pots. Under the cool shadows of such facts there is but little encouragement to foster or develop nature's beauty in form of blooming plants in pots:

To brighten weary winter's gloom,
And to scent its cold breath with the
fragrance of June.

The scene of this gloomy picture from one branch of our business lies in Philadelphia, the place where I have watched and catered to this line of horticulture for the past twenty-seven years. (My remarks refer to this locality only, not being acquainted with the demands of other markets.) I have grown nearly all of the popular plants of the day, and have introduced many novelties with some success, and many failures. I will not attempt to name or enumerate the many varieties of plants I have grown in the past, as I do not wish to take up too much of your time, nor to wander so far from the question, although it might be interesting to some.

The following, I think, will be more or less profitable to grow. I will open the list with chrysanthemums, as the festive season opens with the advent of her queenly beauty. They are wanted in large quantities, but not as many as former years. Poinsettia and stevia are both good in limited quantities for Christmas. Carnations, in variety, are wanted, but do not grow them unless you can produce good plants in 6-inch pots full of buds and bloom for fifteen or twenty cents each; I can not. Begonia incarnata robusta is the finest of all begonias when well done for the holidays. Begonia rubra is a fine pot plant when well grown. Cyclamens and primulas are very popular, but the former require some skill and much care to grow. Liliun Harrisii is in fair demand from Christmas to Easter. Azalea indica is the most popular of all winter blooming plants in pots from December to May. Genista canariensis and racemosa in small quantities from the 1st of February to Easter. Ericas or heather, hyemalis, Wilmoreana and gracilis are

the best of this extensive class of plants. Cineraria hybrida is always wanted in goodly numbers. They make a big show on the florist's counter, but a very small one on the grower's ledger. Paris daisy (Chrysanthemum frutescens), is quite a favorite all winter. Mahernia odorata is admired for its fragrance, or its vulgar name "honey-bell," I know not which. Mignonette, heliotrope, violets, pansies, English primroses, hyacinths and narcissus are all wanted in limited quantities in the latter part of winter and early spring; but the price is so low for them, it is a question to me whether they are worth bothering with. Some years ago there was a good demand for this class of plants at fair prices, but they no longer seem to please the masses.

The above is about all I can think of that would pay to grow in any considerable quantities, although there are many other flowering plants that could be disposed of in moderate numbers, such as fibonias, linums, and the many varieties of winter flowering begonias, etc. In fact, any plant that is pretty and showy will find some admirers, but not enough to make it an object of profit. We can not give correct advice to a grower what he should grow. One man may be able to grow a plant quicker and better than another can; therefore he could grow it cheaper, or make more money at the same price than his competitor. Hence the importance of self reliance upon self judgment. And again, I have ever found, he that is always giving advice himself is most in need of that which he parts with so freely. One thought more, Mr. President, and I am done.—

Nature, like friends, will help the strong,
Neither has much time for the weak, in
life's busy throng;

So work, and on yourself depend!
Then nature kind will make yourself
your dearest friend.

Thursday Morning Session.

ELECTION OF OFFICERS.

The election of officers resulted in the election of Mr. Edwin Lonsdale for president; E. C. Reineman, vice-president; W. J. Stewart, secretary; H. B. Beatty, treasurer. The ballot for president stood: Lonsdale 135 and Scott 86. As soon as the ballot was announced Mr. Scott moved that the election be made unanimous, which was done. In response to a call for a speech Mr. Lonsdale said he had not anticipated such a weighty foe as Mr. Scott, and when he found that gentleman was in the field he considered his own election so doubtful that he had not prepared any speech of importance. Mr. Scott, in response to a call, said he had yielded to the solicitation of others in becoming a candidate, and when he found the "Brave old Duke" was in the hands of his friends he was with difficulty kept from withdrawing. He added that in electing Mr. Lonsdale the society had selected one of the most worthy and amiable men in the country, and one who would honor the office. The friendliness of the contest for presidential honors was well illustrated by the charming sight presented on Wednesday afternoon of the two candidates promouading up the avenue arm in arm.

The election of vice-president, secretary and treasurer was by unanimous vote, each officer-elect responding in a few words of thanks for the honor conferred.

Mr. Simpson then read his essay as follows:

Fertilizers and Their Application.

BY MR. ROBT. SIMPSON, CROMWELL, CONN.

I must ask you to be as patient as possible this morning while you listen to my very prosaic remarks. Devotees of the rose, the orchid, the chrysanthemum and the violet have charmed us as they have descanted on the beauty or sentiment of their favorite flowers, but you will all agree with me that my subject is not one which lends itself naturally to poetic utterance. The question of fertilizers, however, is one that interests every grower of plants and flowers, and if I cannot treat the subject from the standpoint of the chemist as well as that of a grower I can at least relate a little of my own experience.

According to my observations a great many growers attach too little importance to the quality of the soil, especially for roses, thinking to make up for any deficiency by a liberal application of manure. But can the necessary elements be supplied in this way? I should certainly answer in the negative. If it were possible to get a soil sufficiently rich in all that is necessary for the proper development and sustenance of our greenhouse plants, without any addition of fertilizers, I would be only too glad to use it. Few of us, however, are fortunate enough to possess such a soil; one of the greatest mistakes, however, that a florist can make is to put up a range of greenhouses where the soil in the immediate vicinity is unsuited for greenhouse purposes. Nothing in the shape of large glass and model greenhouses, or even special treatment, can compensate for poor soil. The question then is, what can be considered the best soil for such crops as roses, carnations, chrysanthemums, etc? My choice would be two inches from the top of an old rich pasture, where the soil is inclined to be a heavy loam and the land is low enough to catch the deposit from the continual washings, yet not low enough to be sour and wet; this cut in the spring as early as the land is dry and laid up with good cow manure of the previous season in thin layers in the proportion of four parts soil to one of manure; if the soil is naturally very rich less manure will answer, and if very poor a larger quantity should be used. Mr. Hunt, in his book, "How to grow cut flowers," strongly condemns the use of cow manure where the animals have been fed with slops from distilleries, claiming it to be as fatal to plants as the refined product is to man; if such is the case, beware! At any rate that from grain fed animals is so much stronger and better that whenever possible it should be used.

Horse manure I would never mix with the soil for roses under any consideration; it may when thoroughly decomposed be used as a top dressing, but its action in the soil is often pernicious in the extreme. I have seen it fill the beds so full of white fungus, resembling mushroom spawn, until the whole thing was matted together and smelled abominably; at other times toadstools would spring up so rank that there was danger of lifting the plants bodily out of the bench; it is needless to say plants cannot thrive under such conditions.

Sheep manure I consider one of the very best fertilizers we have, used either in liquid form or mixed with the soil at the time of planting; but I have never dared to mix it in the compost heap, for too much of it in one place is certain death to all vegetable life. I know of one large grower who declares he will never use another shovelful of it as long as the world stands;

upon enquiring how much he mixed with his soil I found he used somewhere about one part sheep manure and three parts soil. You won't be surprised his plants had the jaundice. We have proof of the powerfulness of sheep manure as a fertilizer if we look at the crops of grain produced by land that has been pastured with sheep. I know of nothing in the way of animal manure that can equal it as a crop producer, but we must use it cautiously; 200 pounds to a 100-foot house of roses or carnations will not be too much if it is pulverized and evenly mixed with the soil, or the same amount can be used as a top dressing. Having secured good soil and good manure and planted therein good plants the most natural thing in the world is that they should grow, providing of course that all other conditions are favorable.

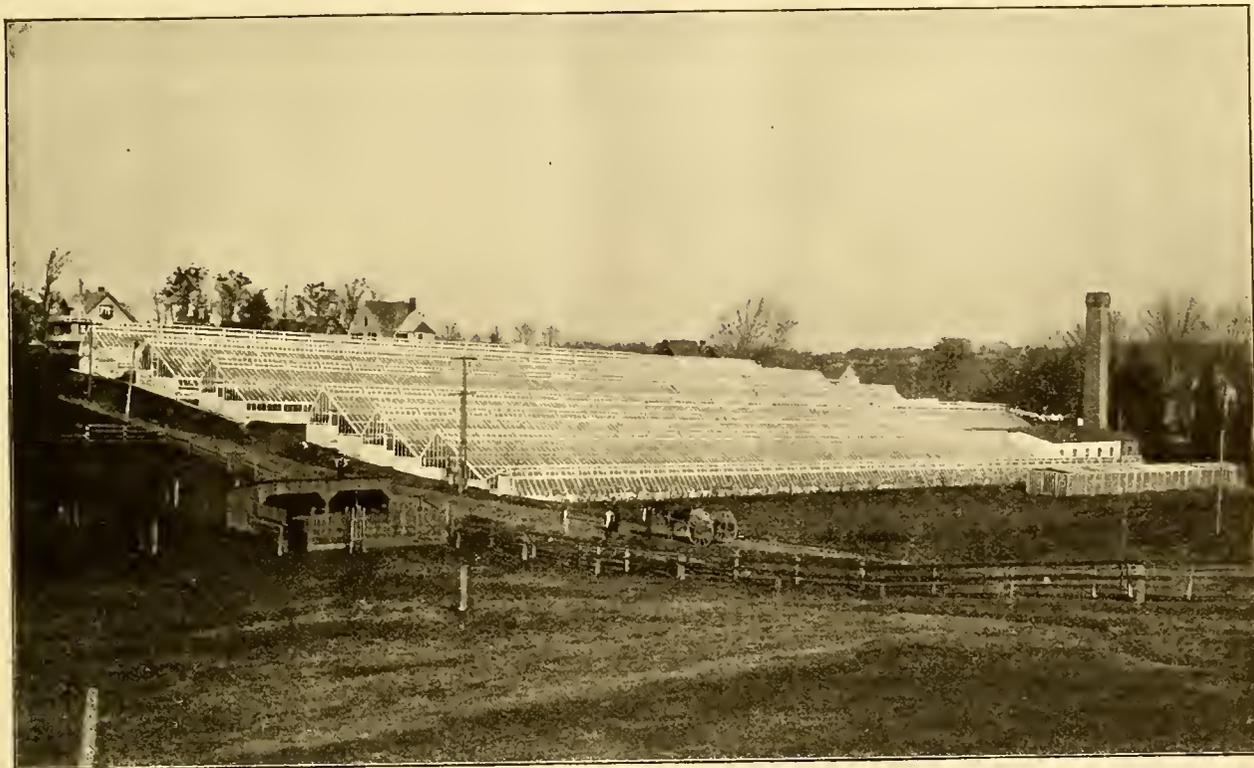

When we undertake to furnish food to a plant or a number of plants it is reasonable to suppose we will understand the particular requirements of the plants and the nature of the food we propose to supply; but I fear a great many of us will have to admit that our knowledge is very scant indeed. If we knew enough about the laws of chemistry to analyze our soils and determine what properties are lacking which are known to be essential to the complete development of certain plants, how much guessing and puzzling we might save ourselves, how many failures and partial failures we could prevent; and for the young men of to-day there is no excuse for this ignorance; if we for the space of one year would devote the leisure time now trifled away to the study of chemistry as it relates to our business we would acquire sufficient knowledge to make us much happier and wiser men. Searching for information on this subject I addressed several inquiries to Prof. Halsted, who I believe is here this morning, and I do not hesitate to say he will be most happy to reply to any questions of a scientific nature bearing on our subject. My first question was "To properly develop such plants as roses, violets, carnations and chrysanthemums what chemical properties should the soil possess?" Here is the answer: "The soil for growing roses, carnations, violets, etc., should contain among the leading ingredients of plant food, potash, phosphoric acid and nitrogen, these three being the elements that are most usually absent, one or all, in a soil that is unfit for such plants. In addition to these three substances there needs to be lime and a small amount of iron and other substances; but as these with rare exceptions are present in sufficient quantity nothing further need be said of them. Clay and sand make up the bulk of ordinary soil in connection with the decaying vegetable matter, and this latter furnishes nitrogen." Prof. Johnson, in his work "How crops feed" says practically the same as Prof. Halsted. Speaking of the relative importance of the different ingredients of the soil he says, "Those which like oxide of iron are rarely deficient, are for that reason less prominent among the factors of a crop; if any single substance, be it phosphoric acid or sulphuric acid or potash or magnesia, is lacking in a given soil at a certain time that substance is then and for that soil the most important ingredient. From the point of view of natural abundance we may safely state that on the whole available nitrogen and phosphoric acid are the most important ingredients of the soil, and potash perhaps takes the next rank. These are most commonly the substances whose absence or deficiency impairs fertility, and are those which,

when added as fertilizers, produce the most frequent and remarkable increase of productiveness." These three ingredients then, nitrogen, phosphoric acid and potash, are the most likely to be absent or deficient in our soil, and for that reason are to us the most important.

How are we to discover their presence in the soil, and if not present how can they be introduced? In reference to the above I asked these questions. "What elements of plant food are found in unleached wood ashes, in nitrate of soda, in sulphate of ammonia, and in kainit?" And received this reply: "The leading food element in wood ashes is potash, but as it is the residue after the burning of a vegetable substance, it contains all of the mineral substances which the plant takes from the soil, and the list would be a long one, including lime, magnesia, iron and not to forget phosphoric acid in combination with lime and so on. Nitrate of soda contains nitrogen in combination with sodium, and is a very satisfactory source of nitrogen; and applied in small quantities the plant quickly responds to the nitrogen that is thus received. Sulphate of ammonia also contains nitrogen, and one of the elements of ammonia which is united with sulphuric acid. Kainit is a mixture of very many substances, as potash, common salt, salts of magnesia, and other substances." All these elements or substances may be in the soil in sufficient quantity at the time we fill our benches and plant our roses, etc., and as a result the plants make beautiful growth, but after a time we fancy they are not doing so well, they haven't the same vigor, the same beautiful glossy foliage, the flowers are not quite as large perhaps, and we think something is wrong; and so it is, the supply of food is giving out, the soil is being exhausted probably ten times as fast as it would be out of doors; the growth is much more rapid, and while it only rains once a week, or once a month in the garden or field, it rains every day in the greenhouse, washing down through the benches each time in solution all the different kinds of plant food. It has been proven that plant food is carried down in the water through the drains of well drained land, in quantity sufficient to mature a crop of grain; this being the case we can readily understand how impoverished our soil in a greenhouse bench must become if the amount of food is not constantly added to.

As a general thing when rose foliage has a pale, yellowish, sickly look, it is a sign the plants lack potash, in which case I should use wood ashes at the rate of one barrel to a 100 foot house of the regulation width. About a month ago we found a house of Perles planted for the summer trade that had just this look, but after a liberal dose of wood ashes they are to-day as thrifty and well colored as could be desired. Fruit growers claim that the "yellows" on peach trees can be overcome to a great extent by a liberal use of potash.

Nitrogen, perhaps the most necessary food ingredient, is usually present in sufficient quantity I think where an abundance of manure is incorporated with the soil, but this is not always the case; and I have come to the conclusion that when plants in a greenhouse bench present a stunted appearance without any apparent cause, the roots being in a health state, and all other conditions being favorable, that the soil does not possess nitrogen in sufficient quantity, or else what it does contain is locked up and is not available for the use of the plant. I had an illustration of this last fall in a house of Mermet

GENERAL VIEW OF MR. HEACOCK'S GREENHOUSES AT WYNCOTE, PA.

and Bridesmaid roses. The house was not completed until sometime in August, hence was planted rather late, but the plants were large and vigorous, and the soil as far as we could tell fairly good; the house itself was all that could be desired, yet somehow the plants did not grow, but immediately after planting took on that hard look which none of us like to see. We waited as patiently as possible until a little ahead of Christmas, and then concluded something must be done, or we would never cut enough to pay for heating the house. We accordingly commenced a systematic feeding from a couple of barrels brought into the house, using sulphate of ammonia and fresh cow manure one week, and alternating with nitrate of soda and sheep manure. The animal manure was used in very small quantities, and the salts at the rate of a 3-inch pottul to a barrel of water. They were watered with one of these liquids once a week for about two months. The change was almost instantaneous, and was most remarkable; they at once began throwing up strong shoots from the root, and while they never grew as large as some of the plants in the other houses, yet they produced large crops of flowers, the individual blooms were large, the foliage was perfect; the plants in fact became so strong and vigorous that we selected all our cuttings of those varieties from these same plants, in preference to any others on the place. This should be a sufficient reply to those who claim, that while nitrate of soda and similar fertilizers may stimulate a plant for a time, they simply do so at the expense of the plant's constitution, being almost certain to produce a soft, unhealthy, unnatural growth.

Some years ago I had a house of Mermets roses which began to go back during

the early winter, and it soon looked so disgraceful that we would have pulled out the plants if it had been possible to use the house for another crop, for they looked for all the world as if they were in the last stages of consumption. We debated for some time as to what we should do with them, and finally concluded to try the same experiment I have just mentioned, nitrate of soda and sulphate of ammonia. My employer had very little faith in them, but as he said, the roses were dying anyway, and if this new fangled stuff killed them outright there would be very little loss. The day after they had received the first dose, I took a look to see if they had improved any; you can imagine how I felt, for there was hardly a leaf left on the plants. I thought we had fixed 'em sure, but we picked up the leaves and kept right on with the fertilizers, and strange as it may seem, before spring this was the best house of Mermets we had.

I am fully aware when I speak of nitrate of soda, that some of you will shake your heads in disapproval; there have been cases of injury to plants, the result of its use (abuse I should say) and there will continue to be similar cases in all probability where care is not taken to use only the safe quantity. I have used nitrate of soda for almost all kinds of greenhouse plants, and am not aware that it ever injured any one of them.

A word about phosphoric acid; I can not tell you what symptoms are manifested by the plant when there is a deficiency of this ingredient in the soil, but as I have never heard or read of there being too much of it for the plants welfare, we are safe in furnishing a liberal supply. There is no question of its being a great factor in furnishing food to plants. Bone

meal is one of the best sources of phosphoric acid, yielding as it does from 20 to 25 per cent. I have in mind a farm which invariably produced wonderful crops; the only fertilizers used were barn yard manure, and for all root crops such as turnips, etc., a liberal sprinkling of half inch bones; this had been kept up for at least thirty years, and as there was a systematic rotation of crops each one fed more or less on the bone in the soil. It was not unusual for a crop of oats to average 120 bushels to the acre. There is danger from bone meal in the greenhouse, however, if it has come in contact with acids; Mr. Hunt mentions having lost \$2,000 worth of new roses at one time in this way. It behooves us then to make certain that our hone is absolutely pure.

Lime is usually present in the soil in sufficient quantity, but an addition of this important ingredient to heavy or clayey soils is often very beneficial; it acts as an enricher, as a sweetener, as a pulverizer, and as an insecticide, hence its value to the florist. I had a peculiar experience this spring in the use of lime. Two benches of ferns planted out for cutting became infested with a black fungous growth which threatened the destruction of every plant; we scratched it off, but it grew again, and the plants got smaller daily, when it occurred to us to use air slacked lime as a top dressing; I was sure it would kill the fungus, and didn't know but it would kill the ferns too; but we tried it, a good covering, over crowns and all, and strange to say that while it did not kill the parasite, only checking it, it started the ferns into active growth, and since then we have picked in large quantities the longest and finest adiantums I have ever seen grown on a bench. It is hardly necessary to say I shall not

be afraid to use lime on ferns in the future.

Perhaps the most satisfactory and economical method of supplying food to such plants as roses and carnations during the winter and spring months is by means of liquid manure; I have a decided objection to laying manure on the benches as a top dressing in the late fall, or during winter, believing it to do more harm than good; it prevents evaporation and keeps the sun from the roots at the time when they are benefited the most by its direct action. I do not wish it understood that I dislike mulching at any and all seasons of the year, for I have regularly attended to this operation twice during the season with all tea roses, the first time in August, and the second about March; the first saves a great deal of watering and is entirely gone by November, and the March mulching gives the roots new material to run in and also prevents severe drying out. Between these dates and in fact after the latter date I consider liquid manure cheaper, cleaner in the house and more effective; for ordinary purposes that made from animal manure is the safest and best; four pecks of cow or horse manure, two pecks of sheep manure, or one of hen droppings, is sufficient to make 100 gallons of liquid. I have known people who never thought liquid manure was strong enough, unless its odor was powerful enough to drive most people away from the house where it was being used; but this is against all reason and common sense, far better to use it weak and often; plants, like animals, should be fed regularly if they need feeding at all, not gorged to-day and starved for a month. Their food also should be changed from time to time, so that what is not supplied in one form may be found in another.

A word about the mode of applying liquid manure. The old method was to use barrels in the walks, and apply with the watering pot, and a beautiful job it is, crawling along a 12 inch walk with a 3 gallon can in front of you. I have been there, perhaps some of you have; with such a system the man who has charge of your houses is hardly likely to remind you when the appointed day for going through this performance arrives, and I don't blame him. This old fashioned method may do where the place is very small, and can hardly afford to put in anything very expensive, but where there is much glass something better and cheaper in labor should be devised. We have a system which works so nicely that I will try to describe it to you as briefly as possible.

A large tank holding from 8,000 to 10,000 gallons is built directly under the stable; I should mention the fact that there is a cellar under the building, and in this cellar is our tank, six feet deep, half above ground and half below; the drainage and manure from six horses and two cows find their way into it through an opening in the floor, and this with a change to sheep manure, or nitrate of soda occasionally, gives us all the strength we require. By opening a valve the liquid flows by gravity into another tank which is connected with the steam pump. If the water should get too strong we dilute by starting up the clean water pump and running both at the same time. There is no carting of manure, very little mixing, and no disagreeable sights or smells for visitors. You will readily understand the saving in labor over the barrel and watering pot system, when I say that six men with hose and one to run the pump can water everything in our greenhouses in half a day, whereas

with the old method it would require seven men four full days to do the same work, costing just seven times as much, and not giving half the satisfaction.

In conclusion I would say, that with fertilizers, as everything else, we must study, we must observe, we must experiment; nature's secrets are all locked to the indolent and indifferent, but to the man who will dig, who will search, who will explore, she will yield the key, and lay bare her hidden treasures.

The essay was discussed by Messrs. Hammond, Taylor and May.

Then followed the essay by Mr. Grant on the classification of stock, which follows:

The Classification and Inspection of Commercial Plants.

BY G. L. GRANT, CHICAGO.

The subject is entirely too large to cover in an essay of ordinary length, and I shall do no more than present the several main points for the consideration of the society.

It will be admitted by all that the present description of plants by size of pot means little or nothing. We all know that the variation in quality among a large lot of 2½-inch stuff is simply immense, and runs all the way from first-class to stock fit only for the rubbish heap. Can we devise a classification that will make it possible for the grower to intelligently offer his stock for sale and for the buyer to purchase with discrimination when it is impossible for the latter to personally inspect it?

Probably plants can not be so accurately classified as some other things, but we can beyond a shadow of a doubt devise a system that will be a vast improvement upon the one at present in use.

It seems to me that the number of perfect, healthy leaves upon the plant will more nearly determine its actual value than any other one characteristic. I believe we can come closer to an accurate classification than by this means, but this feature will be an essential point in any system that may be devised. Mind, I do not say merely the number of leaves alone, but the number of *perfect* and *healthy* ones. The leaves may be either large or small and still meet the requirements. It is a botanical axiom that the number and condition of the leaves correspond to the number and condition of the roots in a normal plant. With diseased roots a plant can not produce healthy leaves, and with diseased leaves it can not produce healthy roots. Are not then the number and condition of the leaves a true index of the value of the plant?

Of course the size of the pot should also be considered. In classifying young tea roses I would say that a first-class plant in a 2½ inch pot should have not less than 20 perfect, healthy leaflets; a second-class one not less than 15, and a third-class one not less than 10. It would be necessary to consider each class of plants separately of course, as a rule for one might not be just to another. It might even be necessary to consider each variety separately. Even doing this it would not be such a great amount of work to cover the plants most commonly bought and sold through the medium of correspondence.

I would suggest that a competent committee be appointed to devise a system of classification on the line noted, and submit the same at the next annual meeting for the consideration of the society.

I would suggest further that the committee be requested to prepare a comprehensive exhibit of commercial plants of the various classes, the same to be displayed in the exhibition hall for the information and criticism of the members.

Certain it is that we must make a serious attempt to solve the problem of classification if the shipping trade is to continue its growth. In the sharp competition that now prevails there is a continual tendency toward lower quality in order to meet lower prices. Often the "cheap" plants would not be accepted as a gift if the actual quality was known to the buyer. I consider it the duty of this society to make it possible for the grower of really good stock to so offer it in his printed list or advertisement that its value will appear and be appreciated, and for the buyer to be able to know what he is buying.

Of the questions taken from the question box the "Advisability of flower markets" was the only one responded to, Mr. Wm. Feast making a brief reply.

The Trade Exhibition.

The awards at the exhibition were as follows:

FLORISTS' SUPPLIES.

H. Bayersdorfer & Co., Philadelphia, certificate of merit for largest and best general collection of florists' supplies and fancy baskets.

E. Kaulmann & Co., Philadelphia, honorable mention for display of fancy baskets, wheat sheaves and metal designs.

Z. De Forest Ely & Co., Philadelphia, highly commended for general collection of florists' supplies.

E. Steffens, New York, honorable mention for collection of wire designs.

W. C. Krick, Brooklyn, N. Y., certificate of merit for collection of immortelle letters and designs.

J. C. Meyer & Co., Boston, honorable mention for silkline.

A. Herrmann, New York, certificate of merit for large and complete collection of metallic designs.

Whilldin Pottery Co., Philadelphia, certificate of merit for largest and best collection of fancy jardinières.

S. A. Weller, Zanesville, Ohio, honorable mention for fancy jardinières in artistic designs.

A. Blanc & Co., Philadelphia, honorable mention for large collection of imported Japanese flower pots.

Aug. Brabant, New York, certificate of merit for florists' pins.

PLANTS.

Robert Craig, Philadelphia, certificate of merit for collection of highly colored healthy outdoor grown crotons, and honorable mention for general collection of palms, ferns, etc.

Edwin Lonsdale, Chestnut Hill, Philadelphia, certificate of merit for finely grown specimens of *Areca lutescens*.

Siebrecht & Wadley, New Rochelle, N. Y., honorable mention for collection of palms, ferns, orchids, and decorative plants.

Henry A. Dreer, Philadelphia, certificate of merit for collection of fine grown palms and ferns.

Pitcher & Manda, Short Hills, N. J., certificate of merit for collection of palms, ferns, orchids, and stove plants, also for *Anthurium crystallinum variegata*. *Strobilanthes Dyerianus* from same firm was highly commended.

W. A. Manda, South Orange, N. J.,

highly commended for a general collection of plants.

Edw. A. Seidewitz, Annapolis, Md., highly commended for a general collection of plants.

Charles D. Ball, Holmesburg, Philadelphia, honorable mention for general collection of palms and decorative plants.

F. R. Pierson Co., Tarrytown, N. Y., highly commended for general collection of palms and decorative plants.

Storrs & Harrison Co., Painesville, O., honorable mention for collection of budded hybrid perpetual roses.

BULBS AND SEEDS.

J. C. Vaughan, Chicago, certificate of merit for a very complete display of bulbs.

Z. De Forest Ely & Co., Philadelphia, highly commended for Liliums Harrisii and candidum, freesia, Roman hyacinths, narcissus and callas.

F. R. Pierson Co., Tarrytown, N. Y., highly commended for Roman hyacinths, narcissus, Liliums Harrisii and candidum and collection of freesias.

Pitcher & Manda, Short Hills, N. J., highly commended for callas, Liliums Harrisii, longiflorum and candidum, Roman hyacinths, narcissus and freesias.

Henry F. Micbell, Philadelphia, highly commended for cineraria and primula seeds, Lilium Harrisii, callas, freesias and Roman hyacinths.

Henry A. Dreer, Philadelphia, highly commended for neat exhibit of hyacinths and tulips.

C. H. Joosten, New York, highly commended for Liliums candidum, Harrisii, and longiflorum, Ornithogalum arabicum, Roman hyacinths, narcissus, and callas.

CUT FLOWERS.

Cushman Gladiolus Co., Euclid, O., certificate of merit for collection of seedling gladiolus.

W. Tricker & Co., Clifton, N. J., certificate of merit for exhibit of aquatics.

John N. May, Summit, N. J., honorable mention for new rose, Mrs. W. C. Whitney.

E. S. Schmidt, Washington, D. C., a commendable exhibit of water lilies and lotus.

Thomas Foulds, Gwynedd, Pa., honorable mention for two vases of Mermet and Bride roses, unusually good for summer.

H. A. Dreer, Philadelphia, certificate of merit for collection of canna flowers.

Henry Pfister, gardener at the White House, Washington, honorable mention for collection of water lilies.

F. R. Pierson Co., Tarrytown, N. Y., honorable mention for large vase of Meteor roses.

Pitcher & Manda, Short Hills, N. J., honorable mention for collection of hardy herbaceous flowers.

POTS AND GREENHOUSE APPLIANCES.

A. H. Hews & Co., North Cambridge, Mass., certificate of merit for flower pots.

Whilldin Pottery Co., Philadelphia, honorable mention for flower pots.

Parmenter Mfg. Co., East Brookfield, Mass., highly commended for flower pots.

Hitchings & Co., New York, certificate of merit for ventilating apparatus.

E. Hippard, Youngstown, O., honorable mention for ventilating apparatus.

Quaker City Machine Co., Richmond, Ind., honorable mention for ventilating apparatus.

E. A. Ormsby, Melrose, Mass., honorable mention for ventilating system.

Chadbourne-Kennedy Mfg. Co., Fishkill, N. Y., honorable mention for automatic hydraulic ventilator.

Hitchings & Co., New York, honorable mention for iron conservatory, also for

greenhouse construction. Same firm, highly commended for greenhouse gutters.

Lockland Lumber Co., Lockland, O., certificate of merit for greenhouses of cypress lumber.

Powell Fertilizer and Chemical Co., Baltimore, highly commended for display of insecticides and plant food.

Bonnaffon Steel Fence Co., Philadelphia, certificate of merit for fence.

Hose Connection Co., Kingston, R. I., certificate of merit for the Kinney pump, for the distribution of insecticides and manures.

Rose Mfg. Co., Niagara Falls, N. Y., certificate of merit for tobacco soap.

BOILERS AND HEATING APPARATUS.

Herendeen Mfg Co., Geneva, N. Y., certificate of merit for display of boilers, their admirable construction and adaptability for the consumption of the smaller sizes of coal, they being the cheaper, and also their adaptability for either water or steam.

Hitchings & Co., New York, honorable mention for exhibit of boilers, noting simplicity of construction and ease of operation.

Thomas Weathered's Sons, New York, highly commended for exhibit of models of their apparatus, showing improvement and ease of operation.

MISCELLANEOUS EXHIBITS.

Edwards & Docker, Phila., certificate of merit for paper folding boxes for cut flowers.

D. B. Long, Buffalo, certificate of merit for photographs of floral arrangements.

J. Horace McFarland Co., Harrisburg, Pa., highly commended for specimens of catalogue work.

Frank L. Moore, Chatham, N. J., certificate of merit for his Workeasy buckle for cut flower slippers.

Thomas Woodason, Phila., certificate of merit for bellows for distributing insecticides.

C. H. Joosten, New York, honorable mention for bellows for distributing insect powder.

Benj. Chase, Derry, N. H., highly commended for labels and plant stakes.

Worcester Wire Co., Worcester, Mass., certificate of merit for wire plant support, especially adapted for staking carnations. Same firm highly commended for cheap wire nipper.

James R. Wotherspoon, Phila., highly commended for collection of well made watering pots.

Mr. McFarland made his promised interesting exhibit, but owing to unavoidable causes he was detained at home and was unable to attend the convention.

American Rose Society.

At the annual meeting of the American Rose Society Tuesday evening there was much enthusiasm. All details about which there was difference of opinion have now been settled to the satisfaction of all. The work of the society will be pushed actively along. The officers elected for the ensuing year were Robt. Craig, president; John H. Taylor, vice-president; H. B. Beatty, secretary; John N. May, treasurer. The president will at once appoint six members to act with the officers as an executive committee to carry forward the work laid out.

National Chrysanthemum Society.

At the meeting of the Chrysanthemum Society officers for the ensuing year were elected as follows: E. A. Wood, West Newton, Mass., president; E. G. Hill,

Richmond, Ind., vice-president; Elmer D. Smith, Adrian, Mich., secretary; John N. May, Summit, N. J., treasurer. A motion was carried to appoint a committee of three members in the vicinity of the large centers to examine all new seedlings and sports submitted to their judgment. The flowers to be in the second season's trial, and not less than six blooms of any one variety to be sent to such committee.

Boston and New York to Atlantic City.

The magnificent new Fall River Line boat the Priscilla was on Sunday evening, August 19, the scene of one of those jolly occasions which are always assured when a party of florists and their ladies get together in one company. There have been larger delegations on previous occasions, but never a pleasanter one. It was a bright moonlight night, and the cool sea air was enjoyed to the fullest extent, most of the party remaining out on deck until midnight, and indulging in an occasional song under the skillful leadership of Elijah Wood and Warren Ewell. The arrival in New York was signalized by one of those characteristic demonstrations on the part of the New York Florists' Club, which have on so many former occasions been experienced by the brethren passing through that hospitable city. As soon as the boat had touched the dock a committee of the New York Club, headed by President O'Mara, made its appearance, and came aboard lugging enormous boxes and baskets of flowers and smilax, which were quickly arranged on the dining room tables, and the visitors were then invited to breakfast with the New York Club. Their comfort had been further provided for in the way of an Annex boat, which was ready to convey the party directly across the river to the Jersey Central R. R. from the Fall River Line dock. The company aboard the special train from New York to Atlantic City numbered about one hundred and fifty, including a goodly proportion of ladies. On the sides of the cars were banners bearing the inscription in large letters "New York Florists' Club, 1894," and the cars were all liberally decorated inside and out with gladiolus and hydrangeas, lilies and smilax, which had been generously contributed by members for this purpose. Two combination cars furnished abundant accommodations for those who had assumed the pleasant duty of providing refreshment for the inner man, and from the thoroughness of the arrangements and the lavish generosity displayed it was evident that the hand of a fine artist in this line was at the helm. The run to Atlantic City was made in about four hours, nothing happening to mar the full enjoyment of every minute, excepting a woeful accident to a portion of Koffman the smilax king's special supplies, but as this worthy exclaimed, "There was still plenty left."

Convention Echoes.

Overheard at the convention. "Who's that speaking now?"

"That's X. He's for business all the time, but I never saw him doing any."

Overheard on the Philadelphia train. "What do I know about horses? Say, look at here, let me tell you something right now. I bought that horse all alone. He cost me \$125 and I sold him for \$25. Matter with him? There's nothing the matter with him. A little cramped in the leg, that was all. That's straight. I'll leave it to Paul if it ain't."

John Spaulding's remarks on the labor question, and on boys in particular, during the discussion of the president's address, brought down the house. The young old gentleman carries his eighty years with wonderful ease. To those complaining of their experiences with tramp gardeners he said: "When you have a good man treat him well, and you won't have so much experience with tramps."

The essay by F. Schuyler Matthews was pronounced by all who heard it one of the finest things ever done at a florists' convention. H. A. Dreer kindly furnished all the flowers used by Mr. Matthews to illustrate his remarks.

The Philadelphia Ledger had a special correspondent and typewriter in constant attendance at the convention. The Ledger knows what it is about.

The delegates from Chicago and the northwest were delayed nearly four hours, being twice blocked by wrecked freight trains.

The Bowling Contest.

Buffalo won the Philadelphia Club cup for highest three games, the Spaulding cup and the Florists' Exchange banner for the highest score in first game. New York took second for highest three games, Philadelphia third. Keppler of the New York team took first prize for the highest individual score in one game, and also first for highest score in three games. Leuly of New York took second for individual score in one game. See full record of scores below.

The Final Session.

Thursday afternoon the proposed by-laws which defined more exactly the manner in which the funds of the society should be handled were adopted, having been previously read the required number of times. Mr. W. K. Smith explained the cause of the absence of Mr. Benj. Durfee of Washington, and the deferred essay on statistics will appear in the printed report when issued. The report of the committee on fire insurance was accepted, and the committee continued. Mr. W. R. Smith of Washington announced that the bill providing for a charter for the society had now been passed by Congress, and lacked only a few formalities before becoming law. The announcement was received with applause, and a vote of thanks was given Mr. Smith for his efforts in securing the national charter. The report of the committee on final resolutions extended the thanks of the society to the several committees of the Florists' Club of Philadelphia, who had made the stay of the society so pleasant and profitable, mentioning specially Chairman Ball of the Ladies' Committee, Chairman Westcott of the committee on Bowling Contest, Chairman Burton of the Committee on Shooting tournament, Mr. Craig for his efforts in preparing the yachting cruise and entertainment at the Iron Pier, Vice-President Kift for acting as general utility man and helper to everybody, and to the Philadelphia Public Ledger for its excellent reports of the proceedings of the society from day to day. This closed the work of the convention. A full account

of the various entertainments will appear in next issue.

Chrysanthemum Notes.

The houses of chrysanthemums will from now on demand more and more attention, and there will be a large number of small things to be attended to, each one not much in itself, but which in the aggregate will take a great deal of time. The other houses are also beginning to demand attention, and the plants outdoors will soon have to be brought in, so, if you can, it is better to arrange your time and give the chrysanthemum houses an hour or so in the early morning. This is the best time to water them, which will now be required every pleasant morning and on very warm days if the plants are in shallow benches perhaps again later in the day, but avoid watering in the evening, for you are very apt to lose some of the foliage where it is thick and heavy if the water stands on it over night. But it should never be forgotten that the chrysanthemum is a great feeder and at no time during its growth should it be allowed to become dry, and now, when it is carrying such a heavy growth of foliage and the tips are soft, especial care should be taken to prevent it from wilting.

A little time can be well spent every day looking carefully over the plants. The lower eyes will begin to open and send out shoots as soon as the plants begin to bud, and these should be rubbed out as soon as they make their appearance, so as to keep all the strength possible in the top of the shoot. The plants must be kept well tied up, and it is a good idea to keep bunches of raffia or string hung up through the house, so that they will be within easy reach, and as you pass through you can stop and tie up any shoot that may need it.

ELIJAH A. WOOD.
West Newton, Mass.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

We are now in the midst of "planting in" the houses, and a few suggestions or rather reminders will be appropriate, even if they are rather antiquated.

In taking up carnations there are a number of methods followed; some will

take them with a ball of earth attached, others shake it all off, and some will sort of "divvy up" between the two extremes. Some growers prefer planting immediately after a rain, others during a dry spell. Whichever one of these methods you have been the most successful with that is the one for you to use. My own experience is to plant in during a dry spell of weather, when the soil is just loose enough to fall off nicely without shaking it, and thus all the roots are preserved without taking a large useless ball of earth into the houses. Where one does not have too many to plant it is best to wait until the weather is suitable, but for large growers it is not so important an item; at least not as important as to have them housed at the right time, for they can be handled in the houses according to their needs. If they have been planted during a rainy spell they will require a heavier shading, and this left on a little longer than if planted during dry weather, when the plants are comparatively harder and better fitted for transplanting.

For digging use a spading fork, not a shovel, as the digger is less likely to cut roots with a fork. Take boxes deep enough so that the plants when put in will stand up, and not hang over the sides to be all broken up in handling. The digger puts the plants into the boxes at once; these boxes are brought into the house, and the planters plant direct from them, thus avoiding handling the plants and getting them all full of soil and dirty looking; I have seen some freshly planted houses that looked as if they never would get clean.

The soil in the beds or benches, whichever you use, should be nice and mellow but not too fine, for it is better to have it a little rough than so smooth and nice that it will pack solid the first watering it gets. Have it moist but not wet; it should be in condition to plant either with the hand or a trowel; the latter is preferable to keep the plants clean. In planting make a good sized hole, so that you can spread the roots some; it is a mistake to crowd them into a small hole. See that they are not planted any deeper in the house than they were in the field, and press the soil moderately. Water according to their needs, being careful not to turn the soil into mud, as soil in that condition is almost sure death to carnations.

The houses should have a light shading while you are planting and for a week or two afterwards; any good shading that is not too hard to get off will answer for this. Syringe the plants once or twice a day, but not later than 1 or 2 o'clock in the afternoon, so that they will be dry by nightfall, and keep a sharp lookout for them until well started; this is a critical period in the life of a forcing carnation, and there is no eye like your own for seeing that they get through it all right.

ALBERT M. HERR.

Three Gems.

Lælio-Cattleya Maynardi. This grand hybrid was introduced about two years ago by F. Sander & Co., and named in honor of their foreman. It is the result

of a cross between *Cattleya dolosa* and *Lælia Dayana*; thus we have another gem where *L. Dayana* has played an important part. The sepals and petals are light purple, two inches in length by three-quarters inch broad, equal, slightly recurved; lip open, three lobed, front lobe bright rosy purple with deeper veinings, crest and side lobes darker purple; throat white slightly suffused; column white. Flowering in late July and August, twin flowered and lasting long in perfection. This plant must be grown in a basket hung well to the light in the shadiest and warmest part of the cattleya house.

Lælio-Cattleya Timora. This rare hybrid is the result of crossing *Cattleya speciosissima* with *Lælia Dayana*, and the influence of *Lælia Dayana* is very manifest. The habit of plant is intermediate. It is one of the Veitchian gems, and has again proven the value of *L. Dayana* as a parent. The flowers are about four inches across; sepals and petals light rosy purple; sepals two and a half inches by three-quarters inch wide, petals two and a half by one and a half broad, lip long, velvety purple, convolute; side lobes rich purple shaded; throat white slightly suffused rose, with two dark purple lines in the center. The habit of plant dwarf, of good constitution and flowers of great substance, lasting long in good condition, flowering in July and August. It should be grown under same conditions as *Maynardi*.

Cœlogyne Sanderiana. A fine species recently introduced, being discovered by Forstermann while collecting for F. Sander in 1886. While the locality has not been divulged, no doubt it is an East Indian species. The plant is of robust habit; pseudo-bulbs over three inches long, ovate and slightly corrugated; leaves oblong, lanceolate, over twenty inches in length by three and a half in breadth; flower spikes produced with the young growth, twelve to fifteen inches long, arching, carrying about eight flowers over three and a half inches across; sepals and petals pure white; lip three lobed; the side lobes erect, crisped at the front margin, and streaked with reddish brown on inside; yellow blotch on front crisped part of lobes; intermediate lobe of lip acute, reflexed and undulate, with a rich lemon disc on which are raised six or seven fringed ochreous brown lines.

This is indeed a fine introduction and a picturesque plant even out of flower, with its strikingly handsome foliage. Grown in a basket well up to the light it makes its growth immediately after the flower spikes are gone. It should have an intermediate temperature and an abundance of water at the roots while developing the bulbs, after which it should have a season of rest, but should not be allowed to become dry. The spikes will appear about June, when additional water should be supplied to aid in developing the flowers, likewise the future growth of the plant.

It is a pleasure to recommend this fine orchid, developing its flowers as it does in late July and August and lasting so long in perfection. It makes a grand companion to *C. Sanderæ*, *Cummingi* and *ocellata maxima*, all of which are desirable summer and autumn blooming kinds.

WM. ROBINSON.

North Easton, Mass.

CRAWFORDSVILLE, IND.—Premiums to the value of about \$150 will be awarded at the chrysanthemum show to be held next November.

Chicago.

The quality of stock is constantly improving, although the sudden drop of temperature at night from the heat of the day has caused more or less mildew. Beauties are coming in, in quite large quantities, but very few good flowers are left unsold. The smaller varieties however, do not move as freely. Large quantities begin to arrive again from outside points; this stock suffers greatly in transit at this season of the year, and its only mission seems to be to depress prices on fresh stock. Business continues to show a slowly improving aspect in local circles. Demand from outside points is very slow.

The drouth first and now the grasshoppers are making serious inroads on the carnation fields. Quite a number of growers are beginning to bench their stock, although the date is early this seems to be the best course to check this evil. Rust has made its appearance in a number of fields, and Silver Spray, the same as last year, appears to be the worst sufferer. Violets have made a rather poor growth, but are on the whole fairly free from the disease so far.

O. J. Friedman has again taken possession of his store on the corner of Michigan avenue and Jackson street. The store fronts on both streets have been remodeled. This in addition to new and handsome furniture throughout makes the place a very attractive one.

C. Paasch of 224 Clybourn avenue has bought out the establishment of Mr. Schindler of 39 Marion Place.

Among recent visitors were Mr. F. R. Pierson of Tarrytown, N. Y., and Mr. Wm. Clark of Colorado Springs, Col.

Toronto.

It is doubtful if this city will send any representative to the S. A. F. convention at Atlantic City, a statement which I much regret having to make. This is not from any lack of will, the spirit is willing (very much so) but is rather I expect owing to the extremely stringent state of the money market just now. There is considerable guessing as to who will be chosen for president for the coming year, and nearly all the guessers seem to light on a man residing about 50 miles from Toronto, one who is very popular in this part of the country. *Nous verrons*.

The weather still keeps very dry, not a drop during this last week, leaves are falling off some of the trees; the hose has to be kept going constantly, but after all a good rain could do more good in half an hour on an acre or two of grass than the hose would in two days.

Serious opposition is threatened in the banana trade. The Normal School have a bunch with about five dozen very fine pods, and several other places about town are also raising them. It is proposed that a member of the association out of employment should start a stall for the sale thereof, advertising them as follows "encourage home products" "Canadian grown," "Our own make" etc., etc.

Harry Slight still holds the fort at his old stand on Yonge street, in spite of all reverses, I have been unable to get at how the business was worked. The lily ponds at the Central Prison and Reservoir Park are now in their full glory and attract much attention. E.

WINONA, MINN.—W. E. Smith, who was formerly in the business here, has decided to enter the trade again, and is building on Main and Sarnia streets. His establishment will be known as the Southside Greenhouse.

St. Paul, Minn.

Good flowers continue scarce and any sudden call for any considerable quantity, especially in white, finds everyone "sold out." Sales, however, have been light.

The cut of roses is better both in quality and quantity. Some very nice Perle, La France, Meteor, Kaiserin, Albany and Brides are seen. Asters are also coming into bloom and meet with ready sale at cheap prices. Sweet peas still are being offered, but unless a soaking rain comes soon they will dry up entirely.

The flower beds at Como Park are now looking fine. Several large beds of Mrs. Beardsley geraniums in full bloom bear witness to the excellence of that most beautiful variety. The cannas are now in full bloom. Mme. Crozy, Florence Vaughan, Chas. Henderson, A. Bouvier and other large flowering varieties are among the most attractive plants to be seen.

J. C. Fleischer & Son are tearing down their houses, closing out their stock and embarking in the poultry business. Their friends in the trade wish them success in their venture.

L. L. May & Co. have commenced the erection of three new houses, each 12x160 feet in dimensions, to be built with the short span to the south. This will add some 7,000 square feet of glass to their range and give them one of the finest plants in the state.

E. F. Lemke is putting the finishing touches to his new houses, he having added some 7,000 feet of glass to his extensive range. The new houses are well arranged and perfect in detail. FELIX.

OBITUARY.

Mr. W. Hugh Gower, widely known in the orchid world, died at Tooting, England, July 30. Mr. Gower was a frequent contributor to English gardening literature, being an especial authority on orchids and tropical ferns. He was for a long time at the Royal Botanic Gardens, Kew; latterly with Messrs. Williams at Holloway. Mr. Gower was in his 60th year.

J. G. GAMMAGE.

It is with the deepest feeling of regret that we report the death of Mr. J. G. Gammage, junior member of the firm of J. Gammage & Sons, London, Ont., who died at the family residence on August 5, at the age of 29. The deceased was of a studious disposition, and won many friends, who deeply regret his demise. The family have the sympathy of all in their sad bereavement.

Hail Association Report.

SECRETARY'S REPORT.

The Florists' Hail Association now consists of 574 members in good standing, and the risks in force on August 1st, 1894, are equivalent to a single risk upon 6,653,695 square feet of glass, divided as follows: On single strength glass, 2,218,169 square feet; on double strength, 3,163,388 square feet. Extra half, 74,295 single and 17,442 double; extra whole, 408,045 single and 739,735 square feet of double strength glass.

10,403 feet of single thick, and 1,666 feet of double thick was broken by hail during the past year, being a trifle over one out of every 213 square feet of single, and one out of every 1,899 feet of double insured.

The total cash balance in the Treasurer's hands is \$5,200.15; this, together with \$3,000 in securities invested for the Reserve Fund, makes the total assets \$8,200.15, against which there were no liabilities on August 1st, 1894. Of the cash balance, \$4,560.60 belongs to the Assessment Fund, and \$639.55 to the Reserve Fund.

Owing to the depletion of funds by the disastrous losses of last year, it was necessary to levy the 5th assessment on May 1st, 1894, which, notwithstanding the prevailing business depression, was responded to by a greater percentage of members than any previous assessment. The sudden death of Treasurer Hunt upon the eve of the levy of this assessment was especially unfortunate, but by prompt action on the part of the officers and directors, the business of the Association was transacted with trifling delay, thereby in an entirely unexpected manner furnishing a perfect test of the stability of the Hail Association and the perfection of its methods. Your Secretary desires to tender his thanks to members for their patience and forbearance while order was being restored out of the chaos caused by the sudden demise of the late universally lamented Myron A. Hunt. The 5th assessment brought to the treasury of the Association \$3,899.51.

The expenditure for salaries, postage, expenses, stationery, etc. for the year is \$569.62. The amount paid for losses is \$715.77. When compared with the expenditures of \$5,856.83 last year for glass broken, it will be seen that the members of the Florists' Hail Association have reason to congratulate themselves upon their good fortune, which has not been shared by many florists who were not members of the association.

During the past year the Secretary has been able to locate 55 hail storms in 20 different States, some being especially violent.

At the end of seven years the Florists' Hail Association has performed all that the most sanguine projectors claimed, and it is safe to say has fairly earned the confidence reposed in it by its members. JOHN G. ESLER, Secretary.

TREASURER'S REPORT.

During the past year three persons have officiated as Treasurer, as will be seen by the following reports:

Cash in hand, reported by J. C. Vaughan, last year	\$1,679.20	
Amount received by J. C. Vaughan to Sept. 17, 1893	162.99	
Salary as treas., J. C. Vaughan		\$ 4.50
Cash transferred to Treas. M. A. Hunt by Treas. J. C. Vaughan		1,837.69
	\$1,842.19	\$1,842.19

Cash in hand, received by M. A. Hunt from J. C. Vaughan	\$1,837.69	
Received by M. A. Hunt, from fees, new members, reinsurance and 6 months' interest on bonds	375.41	
The following bills were paid by M. A. Hunt:		
By printing receipts		\$ 4.00
By advertising annual meeting (American Florist)	1.96	
By advertising annual meeting (Florists' Exchange)	1.00	
By advertising annual reports (American Florist)	8.00	
By 500 certificates	4.00	
By 200 orders on treasurer	1.50	
By membership in Protective Association	5.00	
By 600 letterheads	5.25	
By advertisement, 1 year, American Florist	25.48	
By expenses of M. A. Hunt to Chicago	9.00	
By stamped envelopes, printing	8.25	
By amount returned to Bradford Rosery	3.50	
By filing certificate with Sec. of State of N. J.	1.00	
By filing record with Sec. of State of N. J.	20.00	
By 1,500 applications	8.25	
By advertisement, 6 months, Florists' Exchange	6.75	
By 650 assessment blanks	4.00	
By 1,000 envelopes	3.25	
By 1,000 applications	7.75	
By Ellis Bros., Keene, N. H., loss	11.01	
By R. E. Nace, Royersford, Pa., loss	10.25	
By Henry Krueck, St. Paul, Minn., loss	18.30	
By Fred Burkli, Bellevue, Pa., loss	47.76	
By mortgage, reserve fund investment	500.00	

Balance paid by McKean & Co., for M. A. Hunt to J. G. Esler, Treasurer	1,497.84
	\$2,213.10
	\$2,213.10

TREASURER'S STATEMENT FROM MAY 1ST, 1894.

RECEIPTS.	
Received from McKean & Co., account of M. A. Hunt	\$1,497.84
Received from McKean & Co., account of J. M. Jordan, being funds received by the president	516.90
Received by treasurer for reinsurance	9.94
Received by treasurer from all other sources	4,241.00
Total	\$6,265.68

DISBURSEMENTS.	
Paid Chapin Bros., Lincoln, Nebraska, 16th street houses	\$ 43.50
Paid Chapin Bros., Lincoln, Nebraska, Union College houses	35.60
Paid Hackensack Republican, 500 postal notices	7.00
Paid expressage on treasurer's books and papers	1.45
Paid Stamm & Clare, Hutchinson, Kans., loss	11.53
Paid Emma Killenberger, Fort Dodge, Iowa, loss	16.74
Paid Langdon & Belt, Sterling, Ill., loss	39.25
Paid F. M. Pennock, Charlestown, W. Va., loss	6.70
Paid expressage on blanks and treasurer's vouchers	1.25
Paid J. C. Willis, East Rochester, O., loss	27.45
Paid 500 proofs of loss	10.75
Paid 100 warrants	1.50
Paid over remittance, amount returned	1.38
Paid 1,000 envelopes	3.00
Paid circulars	.50
Paid J. M. Jordan, president, expenses to Terre Haute, postage, expressage, etc.	18.10
Paid August Mining, East St. Louis, loss	30.80
Paid Ella Campbell Wilson, Cleveland, Ohio, loss	18.19
Paid 150 note circulars	3.75
Paid F. Hahman, Phila., loss	11.07
Paid C. V. Evans, Kearney, Neb., loss	8.78
Paid J. P. Corn, Jr., Lexington, Mo., loss	45.38
Paid Chas. P. Mueller, Wichita, Kans., loss	5.81
Paid S. D. Bradford, Colorado Springs, loss	43.60
Paid Fred Ehrbarr, Cleveland, Ohio, loss	37.75
Paid W. H. Culp & Co., Wichita, Kans., loss	4.50
Paid estate of M. A. Hunt, salary as treasurer	30.00
Paid C. E. Kern, Kansas City, Mo., loss	5.837
Paid 500 letter circulars, 300 note circulars and 100 noteheads	14.00
Paid Frank Luce, Ashtabula, O., loss	123.96
Paid Mrs. S. E. Luther, Lawrence, Kans., loss	4.58
Paid J. S. Morris, Glen, Kan., loss	14.67
Paid Steinhäuser & Eagle, Pittsburg, Kans., loss	4.69
Paid Florists' Exchange, advertisement, 6 months	6.50
Paid Wm. Clark, Colorado Springs, Colo., loss	7.30
Paid The Heite Floral Co., Kansas City, Mo., loss	13.88
Paid Jennie E. Keeling, Canton, Ill., loss	4.00
Paid A. J. & S. M. McCarty, Canton, Ill., loss	10.25
Paid J. M. Jordan, salary as president, 1894	30.00
Paid John G. Esler, salary as secretary, 1894	250.00
Paid John G. Esler, salary as treasurer, May 1st to August 1st, 1894	12.50
Paid John G. Esler, for postage, Sec. and Treas.	45.50
Balance in bank	\$1,065.53
	\$5,200.15
	\$6,265.68

The reserve fund investment consists of:
 No. 1. One 5 per cent Lake View bond for \$ 500
 No. 2. One 4 per cent City of Chicago bond for 500
 No. 3. Two 5 per cent County of DuPage bond for \$500 each 1,000
 No. 4. One 3½ per cent Village of Evanston bond for 500
 No. 5. One 8 per cent mortgage note of Isabella Pearce, of Terre Haute, Ind. 500
 \$3,000
 And 6 months' uncollected interest upon bonds Nos. 1, 3, 3 and 4. And mortgage note.
 JOHN G. ESLER, Treasurer.

Cleveland.

The hot dry weather is of unusual duration this summer and some stocks have shortened up considerable. Sweet peas are very poor where city water is not available. Graham & Son are cutting some very good pink and white with long stems. The asters coming in are good, had and indifferent. Some growers report almost a total failure with this flower. But there is one flower that does thrive in the continued heat and drouth, the geranium beds never looked finer and are one mass of bloom.

Notwithstanding the dullest season the florists have had in years there is considerable glass being added throughout the city. The Williams-Wilson Co., on Eddy Road, will add five additional houses, 150x18. These new houses will be planted with roses, carnations and violets. One large bed of chrysanthemums out doors will have a house built over it and the plants left as they are.

J. W. Heiser, East Cleveland village, has added five houses, one 30x100 for chrysanthemums, two 18x100 for roses, another the same size for palms and decorative plants, and one 12x93 for violets. They are also adding another large boiler. Mr. F. H. Moritz, who is in charge, was complaining of the scarcity of water, which will soon be remedied, as they are building a reservoir on the hill back of the houses with some two thousand barrels capacity. The glass used in the new houses is 18x24 and is from one of the World's Fair buildings. The sash that it came in has been sawed in equal lengths to make walks through the houses.

Congratulations are in order. Charles Erhart, our popular Erie street florist, has taken unto himself a wife. He was married on the 15th inst., and took a bridal tour to Buffalo, Niagara Falls and the East. Although Mr. Erhart is one of the junior members of the craft he has hosts of friends among the trade who will wish him much happiness. L. F. D.

DANVILLE, ILL.—John Willius, formerly with Frank B. Smith, has rented the greenhouses belonging to Nickolaus Admiral, and will carry on the business.

SOUTH HAVEN, MICH.—The State Horticultural Society will meet here August 21-23.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By practical florist, German, single, age 37; first class references. Address H. P., care American Florist.

SITUATION WANTED—As florist, by married man. State wages. Address J. LEE, 627 Oak St., Kalamazoo, Mich.

SITUATION WANTED—Well up in growing roses, cut flowers and general stock; age 30; good references. K. G., care American Florist.

SITUATION WANTED—By florist; 9 years experience; private or commercial; age 20. Best of references. EMIL SMITH, 746 E. Green St., Louisville, Ky.

SITUATION WANTED—By first class storeman; can take full charge of same; 15 years' experience. Perfect decorator, designer and salesman. Address D. ZIMMERLE, San Francisco, Cal.

SITUATION WANTED—By a young man 17 years old to learn the florist business; has some experience in small greenhouse. JAMES S. FRY, Littitz, Lancaster Co., Pa.

SITUATION WANTED—By florist; German; 10 years' experience in growing roses, carnations, violets and mums. Best of references. Address E. H. S., care American Florist, Chicago.

SITUATION WANTED—Commercial or private; age 32, single, American; 8 years' experience; good references. Near Chicago preferred. LOCK BOX 215, Oval City, Stark Co., Ohio.

SITUATION WANTED—By competent, single florist and gardener; well posted. Please give full particulars in answer. Address Wm. B. K., 728 Spring Garden St., Phila., Pa.

SITUATION WANTED—By a first-class German gardener Sept. 1; 16 years' experience. Either private or commercial place. Address M. S., care Mr. Boettcher, 1649 N. Clark St., Chicago.

SITUATION WANTED—As foreman on a commercial place, where a first-class wholesale or retail business is done. Life experience in the trade. Address C. M. 125, care of A. Helen, Graceland Cemetery, Chicago.

SITUATION WANTED—By a practical grower of 12 years' experience. Well posted in all branches. Has had charge of private and commercial places; best of recommendation. Please state particulars. GROWER, care American Florist.

SITUATION WANTED—By thorough experienced and practical glazier and painter in a good firm; has good knowledge of carpentering and packing, and would fill up time in any capacity; state wages. D. W., box 46, East Cleveland, Ohio.

SITUATION WANTED—By a young German florist, commercial or private; 7 years' experience in forcing of bulbs and growing of palms. Can furnish good reference. Address RICH. KOENIG, 17 E. Washington St., Indianapolis, Ind.

SITUATION WANTED—By young man with 8 years' experience in growing cut flowers and a general line of plants. First-class designer and decorator. Best of references. Address C. B. K., 317 N. Vermillion St., Danville, Ill.

SITUATION WANTED—Young man with some experience in greenhouse and cut flower work would like to engage with first-class florist to advance further. Central or South preferred. Address ANXIOUS, care American Florist, Chicago.

SITUATION WANTED—By Sept. 1st or 15th, by boy of 21, as bookkeeper and general assistant in greenhouse or store; also designer; acquainted with names, culture, etc.; have had experience. Good references. Address BOY, care American Florist.

SITUATION WANTED—By a practical florist, fully posted on all the requisites of commercial places, including the nurseries, general propagation, etc.; wishes a situation where executive ability and experience is required. For particulars address FLORAL, care American Florist.

SITUATION WANTED—By a Scotchman as gentleman florist; will take entire charge of a gentleman's place; has been superintendent to J. B. Pace, Esq., of Richmond, Va., for the past 5 years; am married, wife and one child, age 33 years; will be obliged to any seedsman or florist if he can help me get a good situation. Address W. A. FORSYTH, Supt. to J. B. Pace, Keawick, Albemarle Co., Va.

WANTED—Gardener and florist for private greenhouse and grounds. Address J. C. EASTON, La Crosse, Wis.

WANTED—One No. 16 or 17 Utchings boiler, second hand; must be in good condition and cheap. C. W. DE PAUW, New Albany, Ind.

WANTED—A young man experienced in growing roses, carnations and a general stock, also good designer and decorator; must have a No. 1 references and not afraid of work; one with small capital preferred; one capable of taking entire charge. Chance of a lifetime for right man. Address PALMS, care American Florist.

FOR SALE—Two 9-section Chrmody boilers, cheap. GEO. SOUTER, Elgin, Ill.

FOR SALE CHEAP—Large second-hand florist's Ice Box, value about \$75. VAUGHAN'S SEED STORE, 88 State Street, Chicago.

FOR SALE—Double "Florida" steam boiler No. 63; good as new; a great bargain. Address A. S. EWING, Chillicothe, Ohio.

FOR SALE OR RENT—Greenhouse, 2000 square ft. glass. For particulars inquire of THEO. NOERLE, Green Bay, Wis.

FOR SALE OR RENT—15,000 or 30,000 square ft. of glass. For particulars inquire of A. T. JACKSON, Station X, Chicago.

FOR SALE CHEAP—A first-class florist business in a thriving town of 25,000 inhabitants. For particulars address WISCONSIN, care Am. Florist.

FOR SALE—No. 5 Scollay boiler, used only 3 winters, all in good condition; reason for selling, having put in 40-horse steam boiler; price on application. J. B. FELTROUSEN, Schenectady, N. Y.

FOR SALE CHEAP—Large, new hard wood and glass florist's Refrigerator. Used at World's Fair. Price reduced to \$175. VAUGHAN'S SEED STORE, 146 & 148 West Washington St., Chicago.

FOR SALE—Flower store with greenhouse; best location in city; well established in refined neighborhood. Going out of city. Must sell at once. Address STORE, care American Florist.

FOR SALE—Complete file Am. Florist, 9 Vols. 5 bound and 1 binder; also 1 10-H. P. upright boiler, 1,000 feet 1-inch pipe, 200 3x6 sahes, 1,200 1x12 lights of glass. Wm. H. BARNES, Box 845, Independence, Kans.

FOR SALE—In northern Indiana, greenhouse plant of 5,500 feet of glass in greenhouses and sash, 1½ acres land, good general stock of plants, roses, carnations and chrysanthemums; greenhouses and house heated with steam. INDIANA, care Am Florist.

FOR SALE.

Greenhouse plant 7 miles from center of Chicago in one of its finest suburbs; 3 houses 3x11, one 12x20. Hot water; established all-round retail trade; good winter stock. Long house and ground lease, or will sell entire. A great bargain. Address BOX 10, care American Florist.

FOR SALE OR RENT.

Two large greenhouses 100 feet long by 18 feet wide, containing 5000 feet of glass; built two years ago, with all modern improvements, by the late John F. Nitterhouse, practical florist. Greenhouses situated ½ mile from town; convenient to two railroads, and stocked with roses, carnations, etc. Possession given Oct. 1st. For further particulars address MRS. S. J. NITTERHOUSE, Waynesboro, Franklin Co., Pa.

For Sale or Rent.

One of the largest and most successful plants in the State of Ohio, consisting of about 50,000 feet of glass, with three or six acres of fine land; houses all in the best of order, and as good as new; adapted to cut flowers. Reasons for selling, the increasing demand for the Standard Ventilating Machines demands more of my time than I can possibly give it and run the florist business. For particulars address E. HIPPARD, Youngstown, Ohio.

FOR SALE.

Six (6) greenhouses, two hot water boilers, about 2000 feet 2-inch wrought iron pipe, valves, etc., lot of hotbed sash, frames, benches and about 35,000 flower pots. The entire plant will be sold at a very low cash price, as the whole must be removed off the premises before Sept. 1st. For particulars address L. R. MUNN, Station C, Brooklyn, N. Y.

FRITZ KLEIN.

Who can give me any information in regard to Fritz Klein, gardener, of Naurod, near Wiesbaden, Germany? The last was heard of him at Boston in the year 1873; since then he was not heard of. Information about him will kindly be sent to.

MR. F. SEULBERGER, Seedsman and Florist, 509, 511 & 513 Seventh St., Oakland, Cal.

FOR SALE.

A VALUABLE 28-ACRE FARM, WITH GREENHOUSE AND LARGE AND PROFITABLE TRADE ESTABLISHED.

The residence of the late Mr. E. G. Bridge, delightfully situated on Washington St., in the city of Woburn. The buildings consist of a small two-story house of 6 rooms, with shed and storeroom connected; house is painted, blinded and in perfect order, supplied with city water; good barn, with cellar, hennery, ice house, shed and silo buildings.

FIRST-CLASS MODERN STYLE GREENHOUSE.

125x20 feet, built in the most approved style, with large boiler and hot water connections, and the foundations ready for another large house.

The grounds are stocked with 5,000 of the choicest kinds of Pinks. Also Asters, Roses, Shrubs and Hardy Plants (for which there are large orders for future delivery), and the trade can be doubled in one year. The land is beautifully situated, commanding a large street frontage, suitable for building lots, and has fruits of all kinds, shade trees, and Electric Line to pass the property; a large amount of choice white "Pinks" are being sold every day.

OVER \$3000 HAVE BEEN EXPENDED on the greenhouses and Plants in order to make it the leading place of its class in the county. Owing to the sudden death of the late owner, we offer this entire property for \$6,000.

J. L. NASON & CO.,

VAUGHAN'S "INTERNATIONAL" Pansies.

Put up, named and sold by us for the past four years, from the best strains produced in Europe and America.

It is generally admitted that we have had the unest show of Pansies on the grounds of the World's Columbian Exposition, and for these we received the only award for mixed Pansies.

No other firm is authorized to offer our Vaughan's International Mixture, and those using this name to sell other mixtures, are "imitators." The genuine can be had in our packages only.

The new crop seed secured in Europe this season by one of our firm is now in our stores, and orders can be filled immediately from New York or Chicago.

Trade pkt. 50c; ¼ oz. \$1.50; oz. \$10.00.

Also —
VAUGHAN'S GIANT MIXTURE, ½ oz. 60c; oz. \$4.00
TRIMARDEAU IMPROVED, ¼ oz. \$1.00; oz. \$3.50

ZIRNGIEBEL GIANT PANSIES.

Owing to favorable weather, have been magnificent this season. Never before have we obtained such size and colors; and as usual, wherever exhibited, have eclipsed everything else, receiving also the most flattering testimonials from the leading florists and seedsmen all over the country.

New seed ready now of both the Giant Market and Giant Fancy in trade packets of 2,000 and 500 seeds respectively at one dollar each, with practical directions for growing pansies.

PLANTS READY NOW:

DENYS ZIRNGIEBEL,
NEEDHAM, MASS.

PANSIES...

Every Grower Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders.

An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance.

ALBERT M. HERR, L. B. 496, Lancaster, Pa.

Pansy ★ Seed.

The JENNINGS STRAIN of high grade Pansy Seed. New crop now ready. Saved with special care from only the very finest varieties and (warranted) first-class in every respect.

THE JENNINGS XX STRAIN.

The cream of Pansies. Grand colors mixed. pkt., 1500 seed, \$1.00; 1 oz. \$3.00.

The Jennings Strain, finest mixed, pkt. \$1.00 about 2500 seed; 1 oz. \$3.00; 3 ozs. \$15.00. No strain milk in this strain. (They are just as good as I can make 'em). To my old patrons I would say they are a big improvement over last season—more variety and finer colors. The best strain for florists either for winter bloom or spring sales; all large flowering.

Black Tr. Faust, finest, pkt., 2500 seed, \$1.00
Finest Yellow, black eye, " " 1.00
Pure White, the best, " " 1.00

When writing to any of the advertisers on this page please mention the American Florist.

London, Ont.

A. G. Stephens, with J. Gammage & Sons, has bought some property, and will shortly build and start in business.

Business is somewhat better than usual at this season; what with dry weather and the grasshoppers outdoor stuff is becoming short. Carnations are looking well considering the very unfavorable season. Chrysanthemums all around are in much better shape than usual; every one apparently making an extra effort.

Mr. C. M. Greenway, late of Grand Rapids, Mich., will shortly open the store formerly occupied by J. Dilloway, who was recently sold out.

JOSEPH HEINL, Jacksonville, Ill.

Boston.

The weekly free exhibitions of the Massachusetts Horticultural Society are proving immensely popular this season. For the space of two hours it was almost impossible to move round the hall on Saturday, August 10, so great was the crowd. The special features of the show were a grand collection of sweet peas and single petunias from A. A. Hixon, of Worcester, sweet peas from Oswald Ralph, gardener to John P. Spaulding, callunas from Joseph Clark, an extensive display of gladioluses from J. Warren Clark, a group of Cattleya Gaskelliana from Benj. Grey, twelve immense blooms of Cereus triangularis from Harvard Botanic Garden, perennial phloxes from Geo. Hollis, tuberous begonias from C. E. Weld, roses from F. B. Hayes, and native flowers from Mrs. P. D. Richards and others. The exhibit of fruit and vegetables was also far in advance of the average and unsurpassed in quality.

Part II of the transactions of the Massachusetts Horticultural Society for 1893 has been received. It contains a complete list of prizes and gratuities awarded during the year and full reports of all the committees, and makes an interesting volume of 405 pages.

An open letter addressed to the "President and Fellows of Harvard College, the Overseers of Harvard University, and the Board of Visitors to the Botanic Garden of Harvard University," has been widely circulated in this vicinity. The writer, Mr. John A. Allen, alleges discourtesy, incompetent management, and lack of botanical knowledge on the part of those entrusted with the care of the Botanic Garden, and demands the appointment of a commission to make a thorough investigation of the management of this institution.

EAST STROUDSBURG, PA.—The greenhouses and store of A. K. Savacool are in the hands of Frank Smith and Morton Decker, who held judgments against Savacool.

PORTLAND, ME.—E. J. Harmon found a man trying to break open his safe on the night of August 6. The thief leaped out of a window and escaped.

Worcester, Mass.

It is the same old story, good stuff plentiful, sales poor, prices low. Very good asters are coming in in large quantities, the Comet is especially fine. We have been troubled this season with a small black beetle, which eats the buds and flowers, and the little fellow is gifted with a voracious appetite; hand picking seems to be the only remedy.

Lange is cutting quantities of fine *Nymphaea rosea odorata*, which sell fairly well for one dollar a dozen, and also some splendid Mermets.

Gladiolus salpiglossis and cut flowers were called for the exhibition of August 16, but the gladiolus were postponed until August 30. The competition in the stands of cut flowers was very sharp, with a goodly lot of entries, and the quality of the stuff shown was excellent. Mrs. C. E. Brooks was awarded first and F. A. Blake second. There were also many fine stands of *salpiglossis*, which made a very attractive showing; for best stand, W. J. Wood first and H. B. Watts second. Mrs. A. A. Hixon exhibited a splendid table of petunias, among them some good California Giants; H. A. Jones, Mrs. Thos. Ward, H. M. Chace and S. E. Fischer had very good displays of cut flowers, arranged in good taste.

August 23 is the date of the aster show. SEEDLING.

This wooden box nicely stained and varnished, 18x30x12, made in two sections, one for each size letter, given away with first order of 500 letters.

Buffalo.

On the eve of the convention there is little to be said. We are mostly absorbed in thinking about the briny ocean and the good time in store for those fortunate enough to attend, still there will be lots of absentees. Several causes account for this, outside of those who scarcely ever attend, and who merely stop at home from indifference. There will be more than one absent from the best of causes, no funds. Business has perhaps been as dull this week as any during the year, but I have not heard a particularly loud grunt on that account.

The monthly meeting of the Florists' Club occurred at the residence of Mr. J. W. Constantine on August 14. There was a baker's dozen present and several things of local interest were vigorously discussed. Wm. Scott concluded the meeting with a paper which, if it had no other merit, deserved the attention of the members simply because it appealed to them to attend the national convention. He tried to impress on the members the great good our national society has done as well as the floricultural press, which he said never would have existed without our national society.

The Rochester ball players arrived here on Thursday last about 12 noon. We believe they were all horticulturists if not florists. The game was played in Franklin Park, and the result was 25 to 12 in favor of the Bisons. To the writer the game was most enjoyable, and he believes it was to all participants. After the game was over, when we were about to begin, more than half of the Rochester gentlemen insisted that they must take an early train and take the train they did, but that did not stop 30 or 40 young men going to the Parade House at 6 p. m. where soup, fish, turkey, etc. was in waiting. It would be folly to attempt to repeat all that was said. Mr. Fry of Rochester spoke finely for the Rochester men, as did several other of his townsmen. There was of course any amount of Buffalo talk. A Mr. Kendall of Ottawa, Canada, added much to the enjoyment of the evening by several good stories told in more polished style. Mr. Kendall was elected an honorary member of the Rochester and Buffalo florist clubs.

Harry Bunyard of Short Hills has been in town. W. S.

OBITUARY.

Louis Engel, the oldest florist in Canton, Ohio, died in that city very suddenly August 26. Mr. Engel was born in Hanover, Germany, in 1821, settling in Montreal in 1847. From Montreal he came to the States, finally settling in Canton in 1856, where he managed the greenhouses belonging to H. Meyers, corner Plum and Ninth streets, until he bought out the business in 1861.

Mr. Engel was greatly respected for his integrity and energy in business, and his establishment increased with the growth of the city. He leaves a widow and seven daughters.

YOU CAN never invest \$2 to better advantage than in a copy of our trade directory and reference book.

Entertainments at the Convention.

RECEPTION AT CARISBROOKE.

One pleasant feature of the convention was the reception given to the ladies at Ventnor, a place about three miles below Atlantic City, at the fine hotel called "Carisbrooke Inn" (named for a famous house in England). A merry party boarded the special train at Tennessee avenue, which brought them to the place after about 20 minutes' ride, where a pleasant entertainment had been provided. It was more like a large family gathering than a meeting of trade acquaintances. The guests dispersed themselves about the spacious porches and parlors, the musicians engaged soon making a lively background of sound for the rolling waters. Many of the friends enjoyed the beauties of the scenery from the high pavilion, attached by a private boardwalk to the "Inn." From this elevation the view is particularly grand and imposing, for nothing obstructs the vision for miles and miles on every side, and right at the feet rolls the always moving, never monotonous ocean. Those ladies inclined to besetimental sat down and murmured "What an ideal place to be courted in on moonlight nights, when no evening could be long enough," while others of more practical turn of mind descended to the boat houses beneath and soon emerged in the ever fascinating bathing costume with their admirers, determined to lose no opportunity for taking the invigorating sea bath. In the meantime the parlors were filled to overflowing with those who took their amusement in still different fashion, listening to the sweet strains of Mrs. Edwards' voice as she sung of the rejected lover being sent to "float out to sea."

The inevitable "camera man" with his "look pleasant" now came upon the scene and the group that arranged itself about the porch rail and steps was particularly picturesque, with the noble castle-like building for a background, a copy of which will be found in this issue. Refreshments were served in the dining hall or parlors, as one preferred, and as the time drew near for the train to make the return trip all present expressed themselves well pleased with the enjoyable visit and reception.

ECHOES OF THE BOWLING MATCH.

There have been bowling matches without number, but we doubt if there ever was a contest which created so much enthusiasm or one in which so much interest was taken by the players and spectators alike.

Bowling is a great game. There is no other indoor amusement in which so many players can take part at one time as ten pins; no matter how far behind one side may get they are liable by careful and lucky playing to get even with and pass their opponents, and this is one

of the features of the game that makes it so popular.

An audience ordinarily shows its appreciation of good or poor play in various ways, but in a ten pin match they go to extremes and these events are noted for the great din raised by the spectators. In this respect at least we feel safe in saying that this contest broke the record; it seemed for a time like a perfect pandemonium. Some one had procured a half dozen large tin horns, and as each seemed to be handled by a man with good lungs the noise was something frightful. But everything went; everybody was out for fun and all seemed to enjoy themselves hugely.

The clubs did not roll as drawn, as it seemed very hard to get the teams together on time. The first series of games was very exciting, the teams finishing in the following order: Buffalo 1, New York 2, Flatbush 3, Boston 4, Philadelphia 5, Washington 6, Pittsburg 7, St. Louis 8, Summit 9, Chicago 10. Between the second and sixth clubs there was but 17 points, while Buffalo led New York, the second club, 77 points.

There was a great deal of speculation and talk of what was going to be done the next game. Buffalo's lead was a good one, but "She can't keep up the pace," "We've pulled out of worse holes than this," and other like remarks were heard in several little groups. It's good bowling, however, that wins games, and while New York, Philadelphia and Flatbush improved considerably in their playing they did not bother Buffalo very much, and New York was the only club to pass them in this game, making 23 more pins. Philadelphia started out in their second game like thoroughbreds, Anderson making three strikes and all the others doing well. In the first four frames they had scored 385 points, which gait, if they could have kept it up, would have given them 962 pins, enough to have landed the Spaulding Cup and first prize. As may be supposed, the Phila. contingent were very much in evidence at this time. Ifs and buts, however, like the balls that come exasperatingly near making spares, don't win games, and at this juncture, for no good reason, Phila. went all to pieces and lost what chance they had for winning the Spaulding this year. First was won by Buffalo, with an average of 139 pins to a man in the two games.

It now began to look as if Buffalo was going to sweep the board; the first prize depended on the best score in the three games, and as they had a lead of 54 points over their nearest competitor, New York, and were in good shape, their chances looked very bright. New York set a very fast pace, but Buffalo was equal to the occasion and put up their best game, 871, thus winning by 51 pins, an average of 141 points to a man

in the three games. They were congratulated on all sides for their plucky rolling and well earned victory.

Mr. Mepsted of their team was tied with Mr. Leuly of the New Yorks for second prize for best average score in all games, and when this was discovered Mr. Mepsted had gone home. The tie was rolled off with Mr. P. Scott of same team and won by Mr. Leuly by 9 pins, 158 and 167 being the respective scores.

The other individual prize for highest score in any one game was won by Mr. Keppler of the New Yorks, he making 173 in the last game. Mr. Keppler also won the sterling silver cup for the best score in the three games, making 470 points.

Mr. Hale of the Washington Club, made a record, but for which no prize was offered; he made 3 fouls in one frame, thus losing each ball and counting nothing.

Falstaff Eddy covered himself with glory by winning the leather medal with a total score of 242. His great weight was probably too much of a load for his team to carry, as they finished last with a score of 1697.

It has been suggested that in future matches of this magnitude in point of numbers that all clubs that do not make 700 in their first game drop out; this is only an average of about 116 to a man. By adopting this plan the contest would not be so long drawn out and so tiresome to players and spectators. Several have suggested this plan, which is objected to by others, as they say a good player might be in one of the teams dropped and he would have no chance at the individual prizes.

George Anderson has an idea that each club should roll by themselves. He thinks that where there is a choice of alleys the lucky toss of the coin has considerable to do with winning the game. In this match the winner of the toss invariably took the number 3 and 4 alleys, they being the easiest to make scores on. He would start a club on No. 1 alley, then to 2, 3 and 4, and back to No. 1, 2, 3 and 4, finishing the game on No. 2. There would be very little confusion, and the scores could be kept more accurately. In this way each club would roll on all alleys alike and would be on the same footing in this respect.

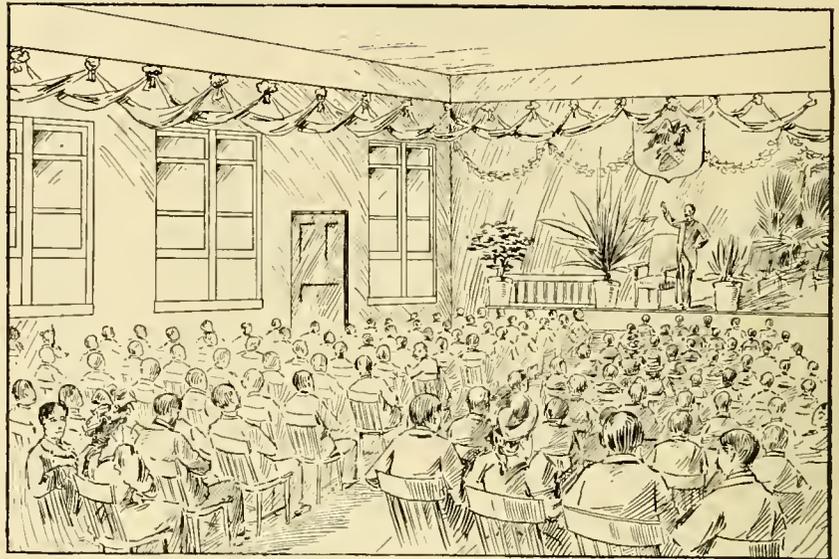

There were many very ludicrous scenes during the progress of the match. Nearly every bowler has a different style in starting his ball, and then his attitude in watching it until it strikes the pins, when he gives a little spring or sweeps his foot across the alley as if to help clear the board, or gradually raising one arm brings it down with a sudden stroke, or they make other movements which are neither ornamental or useful, but, like the noise of a wagon, it would seem as if they can't get along without them.

Falstaff Eddy put a ball down the gutter, but which, striking an obstruction, glanced across the alley and made a strike. He was quite indignant when the judges made him roll at another set of pins.

One of the Boston players got so excited that he wore his necktie down the middle of his back.

The following players passed the 400 line in their three games: Keppler 470, E. Leuly 458, Mr. Mepsted 458, P. Scott 457, L. Brown 439, W. Scott 436, G. Craig 433, J. R. Freeman 426, Mr. Dihm 426, P. Riley 423, W. A. Manda 421, J. Kroomerick 419, G. Bergman 409, J. Manda 403 and J. McRorie 401.

The individual tournament which was rolled on Friday morning had 26 entries.

PARTIAL VIEW OF THE CONVENTION HALL AT ATLANTIC CITY, WITH THE SOCIETY IN SESSION.

Robert Craig had almost to be dragged to the alleys to take part in this contest, as did George C. Watson, they both being busy at the exhibition hall. They were rewarded for their trouble by winning the first and second prizes, while hard working John Westcott won the third. The scores were 166, 155 and 150. The scores of the other contestants follow:

Peter McDonald.....	145
John Walker.....	140
Charles Kahlert.....	136
G. T. N. Cottam.....	128

THE YACHTING CRUISE.

Lovers of the salt water were given a rare treat in the sail from the inlet out to sea on Friday morning. The fleet comprised about fifteen yachts, each carrying from twenty to twenty-five persons. The blue and white pennant of the Florists' Club of Philadelphia floated from each mast head, and the indefatigable members of the club committee worked like beavers. The only contrary factor was the wind, which persisted in blowing the wrong way, when it blew at all, but when the boats had finally got out past the bar plenty of wind was found and they flew along merrily. Musical talent was not wanting and this indispensable feature of the ideal boat ride received due attention. The boats returned to the wharf in time for the popular bathing hour. No seasick individuals were noticed, and a commendable bracing up on nautical phrases was perceptible in the general conversation during the rest of the day.

THE SHOOTING MATCH.

The shooting match was an innovation, and jumped at once into popularity. It passed off very pleasantly and we are glad to say without an accident, as was feared by some. A great deal of credit is due John Burton, who advanced the idea and carried it out to a successful conclusion.

The targets were clay pigeons, which were thrown from traps placed behind a wooden screen to protect the men who kept the traps filled. A rope led from each of the five traps, and as each contestant said "pull" a man back of the gunners pulled a rope releasing the targets. No. 1 trap threw to the right, No. 2 to the left, No. 3 straight away, No. 4 to the right and No. 5 to the left. Five men shot at one time, 5 rounds each; No. 1 shot and then moved to No. 2 trap, and so on until each had shot five, when another team took their place.

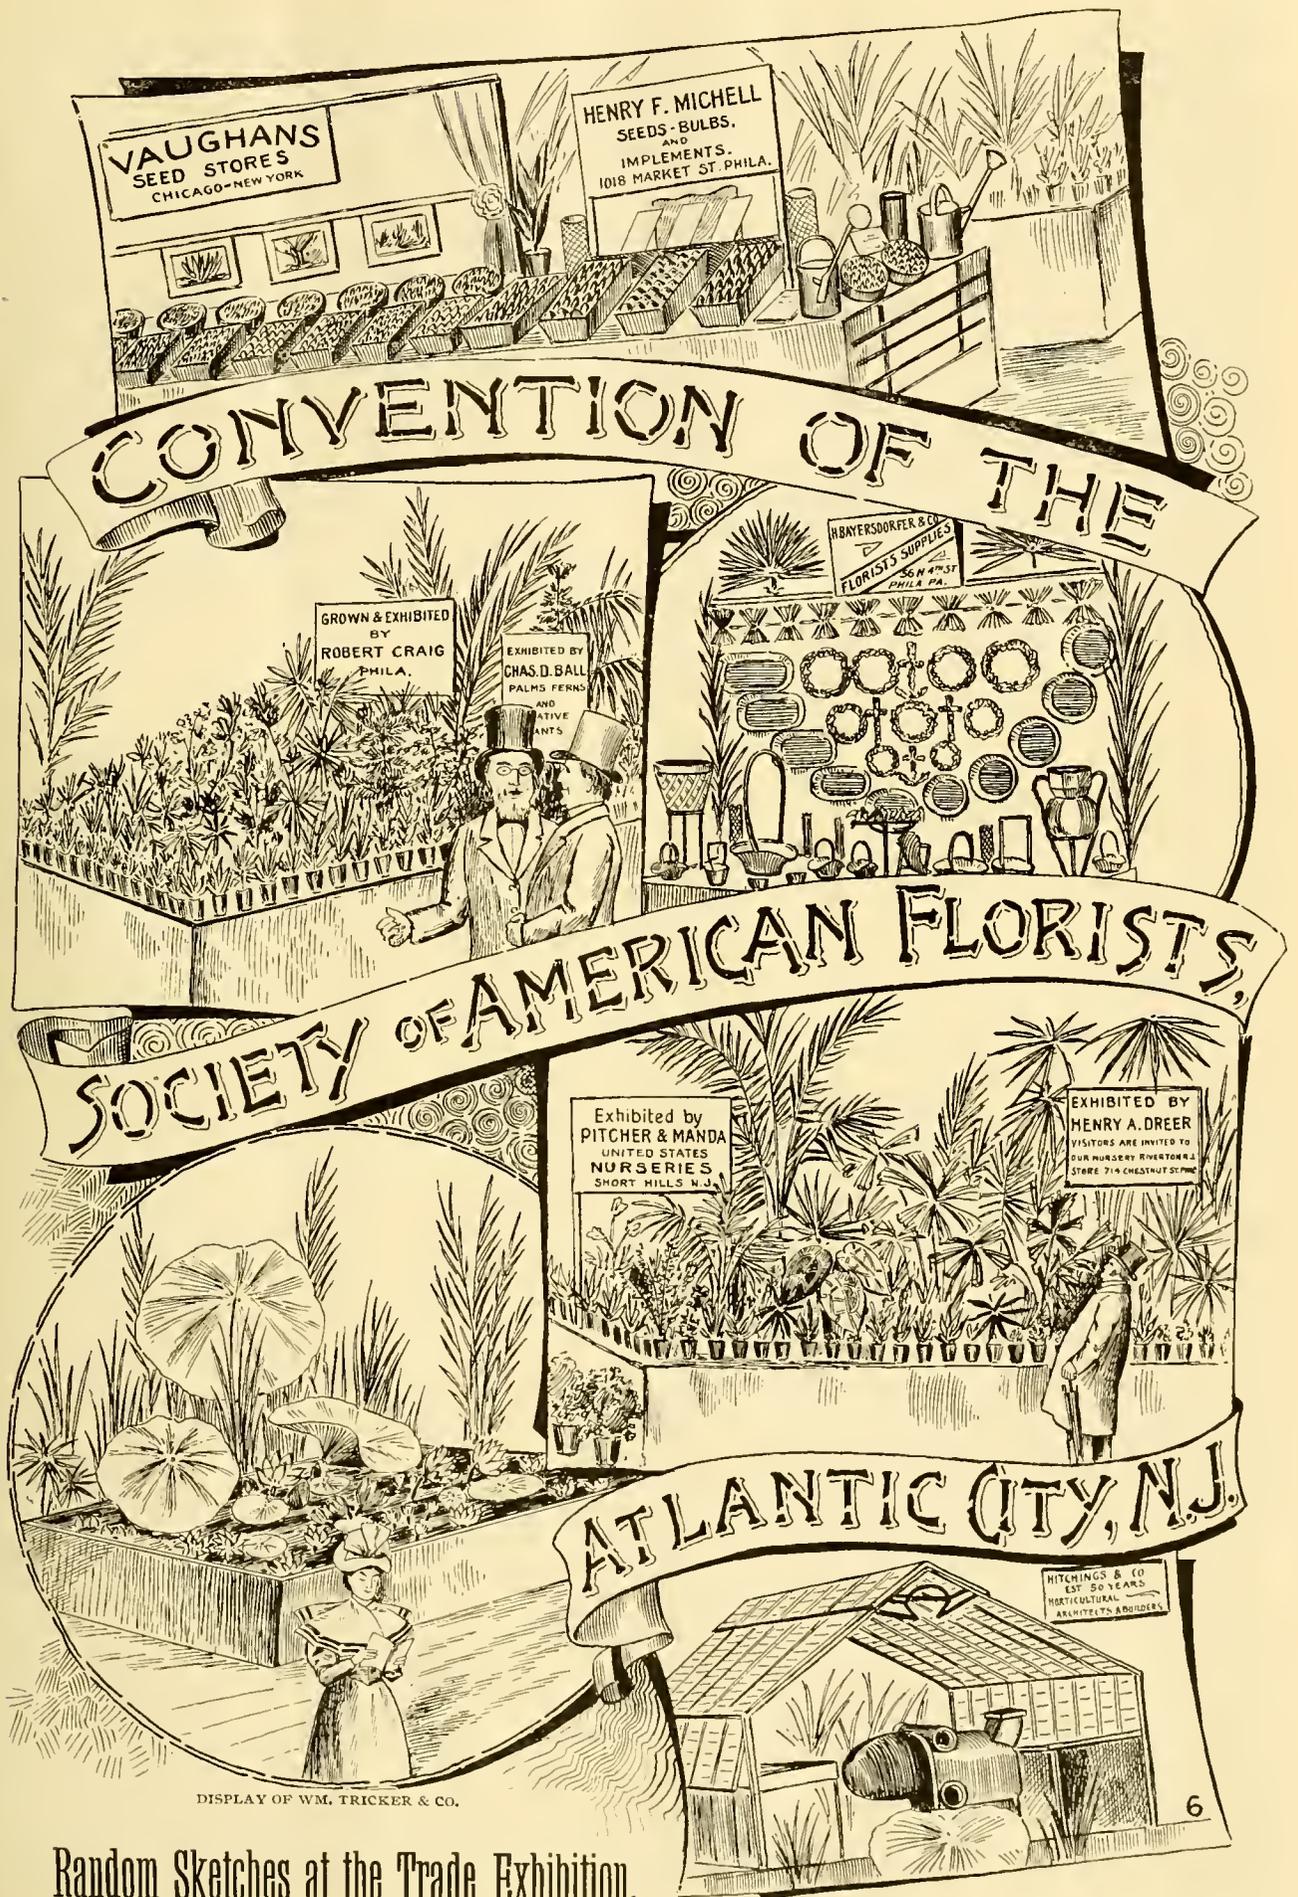

No man was allowed to load his gun until just as he was going to shoot, and after he had loaded he was not allowed to turn around until he had fired. Some of the men had never had a gun in their hand before, and there were three who shot at 25 pigeons and missed them all, and two dropped out after shooting awhile without any results.

The first team prize was won by Philadelphia, with a score of 64 out of 125. This is a beautiful sterling silver loving cup, appropriately embossed and engraved. Second prize went to Buffalo, with a score of 43. P. Scott of the Buffalo team won the third individual prize, a silvered buckhorn corkscrew.

The first individual prize for the highest score was won by Mr. B. Dorrance of the Philadelphia team. Mr. Burton and Mr. Dorrance shot a tie, each having a score of 19. In the shoot off at 10 birds each the score was as follows:

Mr. Burton.....	1	1	1	0	1	1	1	1	1	0
Mr. Dorrance.....	1	1	1	1	1	1	1	1	0	1

The match between these two was very close and exciting. In their desire to see a further contest between these shots some applauded, when Mr. Dorrance missed his ninth bird, thus tying Mr. Burton, who had missed his fourth. It was considered bad taste by some, but the sympathy is always with the loser when he is working hard for the goal, and

Random Sketches at the Trade Exhibition.

anything that brings him nearer is encouraged. Mr. Burton, however, lost, as he missed the tenth, which Mr. Dorrance hit, making the score 9 to 8.

Mr. Burton was very sorry that the individual shooting had to be declared off. Had the teams been ready at the appointed hour there would have been plenty of time for all. The match was called for 1 sharp, but it was 2 o'clock before enough men could be gotten together to start. An hour was lost here, which would have been sufficient for the individual shooting. The first three scores would, however, have been very hard to beat. Following are the scores:

PHILADELPHIA.		BUFFALO.	
B. Dorrance	19	Wm. Scott	14
T. Cartledge	7	P. Scott	16
J. Burton	19	H. Bunyard	1
B. Cartledge	12	C. Hewson	5

The teams finished in the following order:

Philadelphia	64
Buffalo	43
St. Louis	23
New York	22
Chicago	17
Boston	17
Pittsburg	11
Summit	7

THE ENTERTAINMENT ON THE PIER.

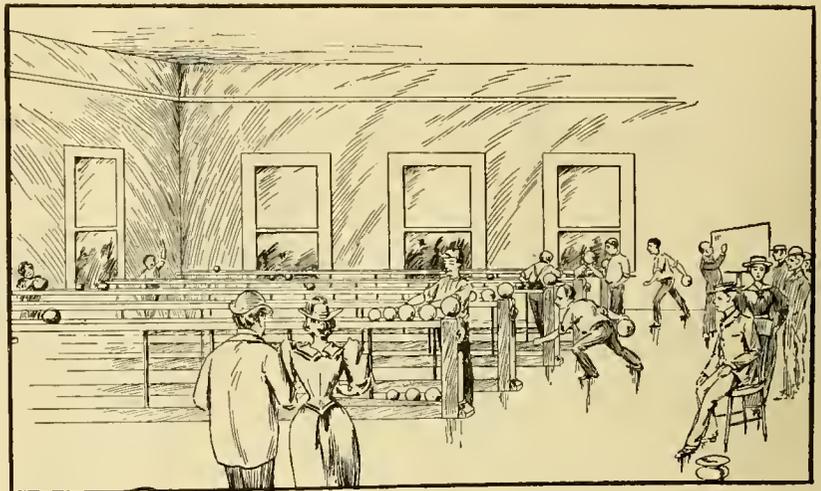

The final entertainment in the pavilion on the iron pier was a very pleasant thing to the social features of the convention. The committee had considerable trouble in carrying out their programme on account of the failure of a theatrical company, which had arranged to furnish first-class talent. The weather was all that could be desired, it being a most delightful evening, and those who stayed to the hop saw the moon rise in great splendor.

The exercises were opened with a few remarks by Mr. Robert Craig, who was glad to see that the members of the S. A. F. had not let the outside attractions interfere with the greater interests of the convention. He said that they would be sure of a warm welcome in Pittsburg next year, and hoped to see there the largest attendance the society has ever had.

The famous Levy, the great cornetist, now gave several solos, accompanied by the orchestra. His first was "The Palms," and for an encore he gave the "Blue Bells of Scotland," then "Nearer, my God, to thee," and concluded with "Yankee Doodle" with variations. The applause was loud and long, and his playing was one of the features of the evening.

There was now some fine dancing by little girls and some singing and dancing by Irish comedians.

Colored jubilee singers also rendered some plantation melodies, which were well received.

A SNAP SHOT AT THE BOWLING CONTEST.

Mr. Burt Eddy, whose appearance brought forth rounds of applause, recited "The old man dreams," by Oliver Wendell Holmes. Mr. Eddy made a capital old man, his acting and laughter being very good, but his performance was much in the nature of a pantomime, as he could be heard but a short distance from the stage. He recited the "Roll Call," by request of Jackson Dawson, in a very creditable manner.

Mrs. T. Edwards, who sang so sweetly at Carisbrooke Inn, was called out of the audience and favored them with two lovely airs, singing for an encore the Slumber Song from "Princess Bonnie." Mrs. Edwards' refined manner and artistic singing were much admired.

At this time a recess was taken for refreshments, after which the scene from Henry the IV was now brought on the boards, with the following cast:

- Sir John Falstaff—Burt Eddy.
- Lieutenant Bardolph—W. K. Harris.
- The two Soldiers—Edwin Lonsdale, P. O'Mara.

It did not take much "make-up" for Mr. Eddy to be ready to play the part of Falstaff, nature having generously provided him with that rotundity so needful and which in most cases has to be counterfeited.

The Lieutenant Bardolph of Wm. K. Harris, for the first time on any stage, was a great effort. We cannot find words to do it justice. His appearance in this play was the feature of the evening. Nature had also fitted Mr. Harris for his part, being as economical with him as she was generous with Mr. Eddy.

Mr. Harris is a talented man; he not only looked the character he essayed, but he acted it like a veteran. That limp! One would suppose he had been born with it and had limped all his life. As an instance of his versatility we will mention that when in Washington at the convention, on the tally-ho ride to Cabin John, he took the horn from the man on the rear seat and blew it to such perfection that the professional looked at him with astonishment.

We shall all have a chance next year to see him on the boards again, as Mr. J. D. Carmody has kindly offered to write a play in which he is to be the star.

The soldiers in this play, Messrs. Edwin Lonsdale and P. O'Mara, are also to be commended for their good acting. Mr. O'Mara's fine voice was the first of the

evening to be heard all over the pavilion, the acoustic properties of the building not being the best.

Of the performance while these artists were on the stage we will say little, as it would be impossible to do it justice; it had to be seen to be appreciated.

For an encore Duke Lonsdale came to the footlights and sang the "Brave old Duke of York" as only he can sing it, the entire audience joining in the chorus. This had to be repeated three times before Mr. Lonsdale was allowed to go.

The Great Scott being next called to the platform delivered one of his characteristic speeches. He complimented the Phila. boys, and saying that he had only missed one convention, had attended all the others, and, with all due respect to the other nine, this one took the cake. Although there was so much to see, business had not been neglected, the sessions being well attended and very interesting. Without the social features the attendance would not be nearly so large. These events as a rule came on the last day, making it a time of rest and recreation after the work had been done. The shooting match was an innovation and he was glad to see it, as it was an event all could enjoy, the ladies as well as the men. Buffalo had shot into second place and his son had won an individual prize, a cork-screw, and said he would give it to his "dada," as he would use it most.

He also praised Mr. Burton for his management of the whole affair.

He now took three little boxes out of his pocket and said he had a very disagreeable duty to perform. He had been asked to distribute three prizes, diamond pins, to three gentlemen who had won them in the individual bowling tournament that morning. The idea that Robert Craig had ever made a score 166, or that George C. Watson had ever been able to roll up 155, and to think that John Westcott should make 150! It was infamous; they must have bribed the boys to bunch the pins. Each man was a chairman of a committee, and this was the way they had rewarded themselves, making so much better scores than the other twenty-three bowlers. "Here," handing the first prize to Mr. Craig, "take it, you don't deserve it"; to John Westcott, "you know you didn't make it"; and to G. C. Watson, "won by fraud!" After the laughter and applause given Mr. Scott had died out ex-President Jor-

THE SHOOTING TOURNAMENT PRIZES.

dan of St. Louis was introduced, and among other remarks spoke of how he would like to see in print the records of the preliminary meeting at Chicago when the foundation for the present society was laid. He would like to see the records of that very important meeting, when some twenty men met in the Sherman House in Chicago at eleven o'clock at night, after the session of the Nursery-men's convention had adjourned, and formed an organization out of which had grown this great society. He hoped that this would be prepared for next year's convention at Pittsburg.

The entire cast now appeared on the stage and the audience joined them in singing "Auld Lang Syne."

The chairs were then removed from the center of the floor and an hour given to tripping the light fantastic, with Mr. H. Bayersdorfer as floor manager, and this closed one of the most enjoyable conventions the society has ever held. K.

The Evolution of the Chrysanthemum.

BY GROVE P. RAWSON, ELMIRA, N. Y.

[Address delivered before the Society of American Florists at Atlantic City, N. J.]

If I had selected my own subject I should have preferred to address you on "Plant life about the Equator." I have had exceptional opportunities for study of natural history in South America. Nature in the tropics is simply grand; I fancy I could have interested you. Vegetable life is so exuberant and in such superabundance that a mere description of its varied species of palms, scandent and upright, the strange flowering trees, the wonderful variety of vines, of shrubby and herbaceous character, the orchid in habitat, far prettier in its natural state amid natural surroundings than as grown under glass, not to mention the splendid fern growth, and floating islands of aquatics—I say a very common statement would command attention, as this field is so much of it unexplored country, being so difficult of access.

But enough—I must stick to my text, the string to my bow at this time is the chrysanthemum. All honor to the glori-

ous flower, the Eldorado of the flower realm. Numerous friends and admirers always look forward to its annual visit and delight to do appropriate honors suited to the occasion. He comes as a conquering hero assured of festive welcome. Many a feminine bosom flutters at the first sight of his curly golden locks, and she wears him over her heart, though it takes her last penny. "So swell," don't you know! The "mum" is decidedly a ladies' flower. These preliminary months are prophetic of future promise. Now is the time to put in our good work, and be not weary of well doing. By and by we may rest from our labors and enjoy the splendor of his regal presence.

Chrysanthemums appear upon the scene with such eclat that old time favorites give way for the time being by mere force of circumstance, unable to cope with such prodigious displays of gorgeousness and brilliancy. What flower excels it in color effect? Its various tints and shadings are at times unique and again startling as to the ordinary rules of color harmony. As well get out your paint pot, and try to reproduce a glorious sunset sky, as to perfectly describe the colors of many chrysanthemums. Nature defies imitation when she gets down to business. When you want a yellow that is pure gold, a ruddy orange or lemon tint, amber, cream or buff, what flower can so satisfy you as does the chrysanthemum? In this respect the "mum" is a peerless flower and unequaled. In its form and shape it is alike varied and interesting.

It is said of some people, don't you know, that they "travel best on their shape." The chrysanthemum might well do so, besides it belongs to the "big four," roses, carnations, chrysanthemums, violets. The orchid and lily claim they don't care for the combination.

While chrysanthemums do not attract the furor of some few years past, and the public press is not so enthusiastic in its exaggerations, and the Hardy type is no longer a novelty, but nevertheless still attractive, and most people are more or less familiar with the "swelled" heads of some of the big fellows, yet all the same the chrysanthemum is no back number,

nor will it ever be. It has come to stay.

Ward McAllister's edict that it is now too common for the exclusive "four hundred" is worse for 'em than it is for it; and for anyone to utter such treason is a shameless affront to the entire chrysanthemum race. So much so that the poorest mum would feel dishonored to bear his name! No fears, though, but chrysanthemums will flourish when Ward himself is quite forgotten. "You can't sometimes most always tell what you least expect the most"—still I have no doubt the king will reign, whether subjects do him honor or no. Vive le roi Chrysanthemum! or dub the flower "Queen of Autumn" if you like!

The chrysanthemum is more useful and popular to-day than ever before. We can not do without it, nor would we. It fills in a gap. It has its essential place that no other flower does or can occupy.

The best word that you can say for a good aster bloom is that it resembles a "mum."

Chrysanthemums usher in November with many a magnificent flower show and private exhibition that otherwise would not be. Florists and Flora's realm ought to be exceeding grateful and do homage to a flower that serves so grand a purpose. Here's to the health of Chrys. Chrysanthemum—whose shadow, may it never grow less, but enlarge!

And I'm proud to say
That I honor its sway
In dull November weather;
When it rules the day
And is bright and gay
As birds of tropic feather.

I am still speaking of the good qualities of chrysanthemums in general. I have not yet got around to its distinctive features of later development. There have been notable improvements in some new varieties, as well as heaps of rubbish palmed off on the public not worthy to have been disseminated, and this fact has lessened the general interest in new varieties not fully tested, or well medaled, certified and abundantly advertised; and many of these even have failed to become standard sorts, from one reason and another. For the good of the cause it is not

wise to have *too* many new kinds offered at a time. There isn't so much room at the top as there used to *was*. By all means let the new comers be distinct in some special feature, as well as up to the required standard in what we expect of a good chrysanthemum. And don't patch out "sets" with one or two of doubtful value. We are already overstocked in this line.

As a matter of fact, there are few connoisseurs at the present time who are willing to pay a dollar or so for a 2-inch chrysanthemum whose merit, after all, is but a question of circumstance or lottery. There are so many—too many—good tested kinds as it is, that it is difficult indeed to draw the line what to retain or discard. The whole chrysanthemum field has been pretty well plowed over of late, in that good, bad and indifferent sorts are alike covered up, some even buried alive that perhaps may be revived again in due time.

No matter how many disappear or are trampled under the rank and file knows no loss. There are plenty of enlistments to fill up the gaps. Recruits from abroad and at home, from the east and from the west, a very cosmopolitan army, making a confusion of tongues! No wonder our chrysanthemum society demands registration, and many of these foreigners require naturalization papers! "Restricted emigration" is one of the topics of the day—why doesn't it apply to chrysanthemums?

Just to sell over the counter, one need grow but comparatively few kinds, standard sorts, white, yellow and pink mostly. But a large collection has its own especial interest. The enthusiastic chrysanthemist creates a special demand for his fine stock. Enthusiasm is no mean factor in the development of trade these days. It comes under the head of advantageous advertisement.

As you all know, some varieties of "mums" you will find useful for one purpose and some for another. There are those to be grown in pots for exhibition to single stems, bush plants and standards, as also for cut flowers. Amateurs and private gardeners occasionally train them into fantastic shapes, all well enough, if it please their fancy, and there is sufficient growth to hide the topmast, mainstays fore and aft, as well as the jib boom. The presence of sticks, wires, or supports of any kind, if at all prominent, considerably detracts from the natural beauty of a specimen plant, no matter how otherwise well grown.

Let the Japanese grow a chrysanthemum bloom three feet across, as it is said they do (my authority is H. Izawa), where is its beauty, when its thin petals have to be kept in place by a wire network support? Give me less flower and more substance.

Reminds me of a story in war time. A soldier home on a furlough noticed for the first time the ladies' new style of wearing their hair, when it was caught at the nape of the neck in a rather heavy net, the so-called "water-fall." "Why," said he, "have the women got so darned lazy, that they have to carry their hair in bags?" Really, we have not much use for a chrysanthemum that can not stand alone on its own merits, *causa sine qua non*.

I believe in evolution as to the chrysanthemum, the fittest will survive; that is my idea of evolution, pure and simple. As the saying goes, "You can't make a whistle out of a pig's tail," the *material* isn't suitable. The so-called connecting links between the animal and vegetable

kingdom are at once separate and distinct after all, whatever the supposed affinities may be.

Four, five years ago anything most would pass muster that was a chrysanthemum. They were all of 'em quite too lovely for anything! Single ones that looked like daisies and smelled like violets? Every style was lauded and praised, including the pin wheel, Catharine wheel, feather duster, water lily and "chalice" shaped flower, as were the anemones and pompons. Now, these classes are not est as to popular favor, and even the Japanese must have less feathers and more petals.

However, when we become too critical we may lose the zest of complete enjoyment. I wonder if this incident is at all apropos. An Irish woman and her daughter came into my store lately to order a flower piece of some kind. The mother had her eye on something large and showy, when made up, plenty of this, and that, and so on. The girl remonstrated, suggesting a more simple arrangement, but was entirely squelched with "Molly, it's meself that's doin' it, and I'm glad I haven't got an educated taste as the likes of you." Oh, it's not half bad.

A musical critic is often so impressed with his own individual art that he quite lacks any appreciation of a brother artist. The "doctors" don't agree when it comes to judging chrysanthemums. Their relative value will vary, much according to the experience and individual taste of A B C. One will condemn what another recommends, the difference of opinion being largely mere point of view.

I will simply give my experience, and confess I do not know all about the subject, nor do I ever expect to. There will always be something to learn in this line or any other, and the more you know only opens up new and greater possibilities for further attainment. Again there will always be different methods of accomplishing the same results.

For myself, I know that I can grow as good chrysanthemums as any I have ever seen on exhibition, with a high average of first quality bloom, and with but a very small percentage of plants failing to flower, or producing imperfect blooms. It is not my thought to go into detailed cultural directions, nor is it necessary—that ground was well gone over last year in Elmer D. Smith's admirable essay "Bench grown chrysanthemums."

I plant my first lot in solid beds about the first of July from 3 and 4-inch pots, good strong plants that have not become starved or woody. I would not want to plant them much earlier than this date, judging from my experience. With me, I get larger flowers, more substance and earlier in bloom, than if planted out in May or June. I stake nothing on the fact, as a rule, it is simply my experience.

Those planted on benches for early and mid-season blooms are in place by the 15th of July, while the late ones for December flowers are not potted off from the propagating bench much before the last of the month, and planted in August. These late ones are all grown to single stems, one flower each from crown bud cuttings, lateral and terminal shoots, according to the variety.

I use plenty of half rotted cow manure for compost, with stiffish sod turned over and stacked up the preceding spring. There is much more "move" to it than if piled up for two or three years, and is better for general planting of stock inside, though not so good for potting purposes, a little too rough and coarse perhaps.

While I use coke for drainage in the bottom of rose benches, with chrysanthemums I use manure instead, the "mum" being so much more voracious a feeder I prefer this course to using liquid; I only use liquid for pot plants.

Give a chrysanthemum too much strong drink and he will suffer from "sour stomach," dyspepsia, and the whole plant will appear to have a bad attack of jaundice. Use it, of course, as necessary, but there is danger of over feeding. When malformed blooms stare you in the face you feel like using "cuss words." Stimulants ad libitum are as bad for "mums" as it is for the human species. In planting chrysanthemums carefully select your young stock same as you would for roses; hard, woody or starved plants ought to be at a discount, even if they are new "mums," and is a waste of time and space. You need to be more particular with some varieties than others—especially those that make a thin waxy growth to start with, as Mrs. M. J. Thomas, Mrs. Robt. Craig, M. B. Spaulding, H. Waterer, and the like. Healthy young stock of Golden Wedding grows quickly and vigorous, but if it once becomes "hard" its growth is stunted and it rusts badly.

Mrs. Craige Lippincott will stand right still when stunted that way, or else put out new growth from the bottom that generally fails to bloom at all.

Mrs. Geo. Bullock (Domination) acts much the same way. By the way, the former name is entitled to precedence. There are fewer chrysanthemums imported under number than of yore, consequently less confusion in names and synonyms. Examples are V. H. Hallock vs. Dawn, Mrs. Humphreys vs. Snowball, Nineveh vs. Charity, Bride of Roses vs. Wm. Tricker et al. Besides, our chrysanthemum society registers the names of new aspirants to public favor, and the debutants are thus properly chaperoned. That's all that saved us from having a baker's dozen Ruth Clevelands when the first baby put in an appearance at the White House. What about Esther? Quite a chapter could be written on histories of synonyms. Good Gracious, the sport of Princess of Chrysanthemums, is classed by many as synonymous with Princess, whereas the real article is a bona fide sport, distinct in habit, of better shape and color, and holding its big graceful flower quite erect.

I have another sport, similar to Good Gracious in every way, except being pure white. I am waiting to see whether it is to be reliable or not. I wouldn't want it to be entailed with curvature of the spine, same as Princess.

I had a yellow sport from L. Canning that showed up grandly last fall. It gave a tremendous deep bloom of pure golden yellow, lasting a whole month on the plant. Habit dwarf and sturdy like the parent. Still, whether it will pan out satisfactory on further acquaintance is all guess work. Sports should be thoroughly tested one or two seasons, same as we expect of seedlings. A good many seedling novelties that have shown up splendidly at exhibitions, receiving certificates and medals, have really proved utterly valueless. Some of our most desirable varieties originated as sports. Among the newer ones are Chas. Davis, from Viviand-Morel; L'Enfant des deux Mondes, from Louis Boehmer; Clinton Chalfant from Jos. H. White; Kate Mursell from Robt. Bottomly and others.

Of the newer sorts, the very earliest ones are the most sought after. I venture to say that E. G. Hill & Co. have sold one hundred Mrs. E. G. Hill to one of Chal-

BURT EDDY AS FALSTAFF

W. K. HARRIS AS BARDOLPH

FROM THE SCENE FROM HENRY IV PRESENTED AT THE ATLANTIC CITY S. A. F. ENTERTAINMENT.

lenge for this very reason. By the first of October chrysanthemums are in demand and you are repeatedly asked "how soon will they be ready?" The earliest flowers are quickly disposed of to good advantage, in time to use the allotted space to carnations or some other crop.

As far as I am able to judge of the novelties offered last season, I consider the best very early sorts to be Mrs. E. G. Hill, Yellow Queen, Lady Playfair, Clinton Chalfant and Thos. H. Brown. Doubtless there are others not so well advertised. These earliest sorts are overstepping each other year by year, and are also of much better quality than formerly. Let the good work go on.

I do not mention Mrs. Craige Lippincott, as the merits of this excellent early yellow are sufficiently well known. It is a fine thing, as most of you are aware. The early French varieties of Delaux are of but moderate quality, and not enough substance to grow under glass. I state my own experience. Possibly there are exceptions, as the list is a very large one. Of the extreme late ones are Challenge, Laredo and Eider-down, yellow, pink and white.

Eugene Dailedouze probably showed up to the best advantage of any one chrysanthemum offered last fall. It seems to be all right, and much is expected from it.

Maj. Bonnaffon is another very good one indeed, and so is Minerva, of a rich bright yellow. Marie Louise is a graceful dainty white.

Mutual Friend has good substance, and Mrs. J. Geo. IIs is distinct and very durable as a cut flower, as was evidenced at the World's Fair chrysanthemum show. A. H. Fewkes pleased all who saw it at its best last year. It is confidently expected to be on the front row along with the other good yellows. It is rather after the style of Minnie Wanamaker in build, and reminds me of Mrs. F. L. Ames, '93, also first class.

Pitcher & Manda is distinct from contrasting color. Other certified sorts are Achilles, pearl white, Fairview, crimson lake, Silver Cloud, white and salmon, White Rock and Inter Ocean.

From over the water came the two sports, Chas. Davis and L'Enfant des deux Mondes ("The child of two worlds") is shortened by common consent to

"White Boehmer," and the two seedling Reys, Mme. Edward (renamed) and M'le Therese. This notable quartette were visitors at the World's Fair, and much admired. I don't think they had any cause to grumble for not having been hospitably received.

Varieties wanted for exhibition purposes should be selected among the mid-season kinds, as at this time novelties, curiosities, monstrosities or anything out of the usual line in shape or color will attract attention that would otherwise be of doubtful value.

Some good large disheveled and curled blooms of Bronze and Golden Dragon occasioned as much comment last fall as anything I grew, but of no other value aside from exhibition.

The evolution of popular taste a la mode demands a full high rounded flower of good substance and pleasing color, and at the same time not stiff or rigid outlines, as Golden Wedding, Emma Hitzeroth, Mrs. Craige Lippincott, The Queen, Mrs. Jerome Jones, G. W. Childs, J. R. Pitcher and others. Good foliage is another requisite in the general make-up of an ideal chrysanthemum. Wm. Falconer

and White Boehmer are very popular with the home trade, but do not ship well. Do you remember the advent of Mrs. Alpheus Hardy and the boom it was to chrysanthemums? No prima donna was ever half so much talked about either by word of mouth or through the public press. I saw it for the first time at Philadelphia on exhibition under a glass case. It proved as good a "drawing card" as an Egyptian mummy or a live mermaid. Golden Hair is claimed to be a worthy yellow, of this class, we have had nothing of any real value in this color, up to the present time. The numerous claimants were simply adventurers.

Chrysanthemums are like certain fruits, there is a great difference in their shipping qualities. Some of the very best strawberries for near at home use will not bear carriage any distance, so it is with many chrysanthemums. The splendid blooms of Vivian-Morel, Niveus and others of similar build are better for the home market. Not that they lack substance, but are difficult to ship on account of their shape. These do not travel so well on their "shape" as do some others.

Bryden Jr. and M. B. Spaulding are splendid yellows, representative of what "the golden flower" ought to be, rich color, large, full and shapely.

Mrs. Robt. Craig and its "double" except in color—a light yellow—I refer to "Congo," introduced by Yoshiike, are both extra good. The blooms are very durable either cut or to remain on the plant. These are really hybrid in class, partaking of the breadth of petal and grandeur of build of the Japanese, with the spherical outline of the Chinese.

Golden Gate, J. C. Vaughan and Chicago are very attractive blooms if cut before the eye becomes prominent.

Col. W. B. Smith and Edward Hatch would both be grand if they could only hold their heads up. A little weakness in the stem is a bad fault in a chrysanthemum, and unfits them for general duty.

Our fair English cousin Florence Davis has either a weak neck or else is too modest by half. A chrysanthemum with a weak stem is as bad off as a man without any liver—neither of 'em haven't got long to stay here, and it is pro bono publico.

Chrysanthemum "The Queen" is the typical American girl, and fitted by nature and education to adorn the highest position. I admire the Grace Hill type, a rich blush incurve of remarkable substance, though not entirely covering center; still with the incurved sorts the suggestion of an eye does not detract at all from the symmetry of the flower. Indeed, graceful outlines are often wanting in the densely doubles. Mermaid is of this type, but deeper color and quite covering the center. It is an all 'round variety. Good for cut flowers and for exhibition, also makes a good pot plant, though some authorities claim it a poor grower.

Reflexed and recurved sorts should be full and double for the most part. This class has been much improved of late years, and we now have some superb varieties for exhibition and cut flowers. Jos. H. White is a distinct type and one of the most popular. Eda Prass, Niveus, Chas. Davis and Tuxedo are each representative. Tuxedo is the best amber or orange cut flower to date, splendid keeper and shipper.

I think W. W. Coles is prettier for showing the eye than if it was more double. It has a most pleasing flower of particularly bright color. There is nothing just like it. Individuality is as marked among chrysanthemums as in pansy faces. The one, so diverse in color and shape,

other in striking variations of color and expression.

To grow chrysanthemums well one needs to know their separate individuality, and like some people you know, improve on acquaintance. But a single variety affords material for a diffusive English treatise. In our climate, under glass, chrysanthemums are much easier grown, and with less care and expense, than in England. Besides, we can grow them in half the time and by simpler methods. Let a novice read or study the elaborate English cultural directions and he would be ready to give up in despair. Experience is always the best teacher, though sometimes it costs us pretty dear—"Le cout en oter la gout" the French say—the cost takes away the taste.

Belle Poitevine is a beauty of the regularly incurved ball shape Chinese section. It is a very early sort and exceedingly useful for cutting. Makes the prettiest boutonniere of any chrysanthemum extant in my opinion, and first-class for plateau work, with growing ferns bedded in the moss. (This is the proper way to use ferns for this purpose, be the flowers what they may). Belle Poitevine is much like Mrs. Geo. Rundle in general effect, easier grown and earlier is its distinctive feature. It is a grand keeper, as all kinds should be, selected for cut flowers. It is aggravating enough to have a flower go all to pieces almost as soon as cut, like Mrs. Langtry, L. Canning and Mabel Simpkins. In a short time these varieties resemble plucked geese, and eye each other askance—all "eye," in fact, in their denuded state. I grow Belle Poitevine largely, and Carrie Denny, of similar build, an early bright amber, that takes well with the home trade.

Marguerite Graham is a later cut flower kind I think highly of. A shapely white, luminous with golden light. This has grand keeping qualities also.

I greatly admire early Dr. Callandrea, of similar tint, as probably you do. The white and gold effect is much like some silks; in certain light one tone is prominent, that shifts to the other according to focus.

You can't improve on Molly Bawn and Marie Louise, for a plateau of white with adiantum ferns. Try them in this way, and work out the same idea with young plants of croton and Grevillea robusta for yellow and bronze colored chrysanthemums. A plateau of chrysanthemums when well done is a thing of beauty, or it may be coarse, crowded and bulky. Right here there's a chance for nice discrimination, often blooms that look well in a tall vase are out of place in a plateau arrangement.

American Beauty is a grand decorative flower, but in a hand bunch to carry *does* look stiff and awkward. A bull in a china shop is no more out of place than a big paonia in a lady's hair! Why can not chrysanthemums have special uses same as roses and other flowers?

Ivory is still the best representative white chrysanthemum, all things considered. I believe it scores the greatest sum total of good points.

Wm. H. Lincoln occupies nearly as prominent a place among yellows. New varieties come and go without seemingly affecting their relative position.

Mrs. M. W. Redfield is an excellent early pink reflexed cut flower kind, after the general style of Ivory. Try it. At the second chrysanthemum show in New York, as I remember, the best flower on exhibition was Troubadour, now little seen—therefore the judges would say "distanced." None that have come after

equal its clear shade of old rose. Under artificial light its fine color is distinctively characteristic.

We have a great many lilacs and magentas that are dull and inharmonious. We have no use for 'em, that is to sell over the counter, or for "making up." Except for purposes of exhibition, the extra tall growing kinds will be discarded among commercial growers. Mrs. E. G. Hill is almost too tall for the shelf. What about Harry Balsley? Isn't it a beautiful thing? And V. H. Hallock is a waxy flower of perfect tint. Doubtless I grow some kinds I have found satisfactory that you may have discarded, and vice versa. I can grow my own "G. P. R." profitably, but I don't ask you to bother with it.

There is no *absolute* standard of excellence, save in a general sense. We are all of the same opinion as to some special kinds being good all 'round varieties; aside from this judge and choose for yourself. There is no occasion for growing poor ones though.

Robt. Bottomly or its synonym, Lady Lawrence, Pelican and Mrs. M. J. Thomas are particular favorites of mine. I would also mention Mrs. Humphreys (Snowball); snowball is the better descriptive appellation. Mrs. Humphreys is the name of Elmira's pioneer florist, now out of business. I well remember the late Peter Henderson's enthusiasm in speaking of this excellent cut flower variety. I still find it one of the most useful late kinds. Personally, I am fond of the bronzes. When I saw Comte de Germiny for the first time I thought it the most wonderful flower I had ever seen; and the first sight of Mrs. Wheeler produced an impression I am not likely to forget.

Hicks Arnold makes the best trained standard of any chrysanthemum that I am acquainted with, growth free and vigorous, and perfecting numerous good sized blooms. Pitcher & Manda have showed this up in fine form at several exhibitions. A large specimen shipped to Buffalo chrysanthemum show two years ago arrived in splendid shape with hardly the loss of a single bloom, speaking well for its durability. Chrysanthemum plants in flower don't usually ship very satisfactorily. By the time they get through with the express company, what with bent or broken stems and damaged flowers, their ornate beauty is done for. Hicks Arnold is one of the very best bronzes for commercial use. Nearly all of the bronzes show to best advantage at night, under artificial light, then they are beau and beiles, the observed of all observers, the cynosure of all eyes. H. F. Spaulding is exceedingly attractive in color as well as distinct in shape. It would come in under this general class, as would E. G. Hill, A. Swanson, Harry May, Alcazar, Baronald or Moseman, Mrs. J. T. Emlin, Prince Kamontski and Thos. Cartledge, comprising a fine lot.

I regard Waban an exhibition flower par excellence. It has remarkable depth, quite full enough and of sufficient substance for the purpose. It should be bench grown; is no pot plant.

There are several of the older varieties that still hold their own, and are to be depended on for faithful steady work. Cut Puritan early and its lavender shading is lovely. As a bush plant it is an "old soger," as are Beaute des Jardins, Mabel Douglas, Pere Delaux, Tokio, Cullingfordii, Source d'Or and others. Frank Wilcox used to be a favorite sort for bush plants, in habit all that could be desired, but its flowers, profuse as they were, altogether too stiff and looking like immortelles. Juvena makes a good "bush"

pot plant. I would like to see its striking color duplicated in a large flower. As a rule these shades so quickly fade and lose their brilliancy. Grand Mogul is an example.

Auriole is a halo of silvery yellow, unlike any other. Miss Mary Weightman is a feathery globular mass of bright gold,

E. C. REINEMAN

Vice-President elect of the Society of American Florists.

also distinct, and Mrs. L. C. Maderra quite another type.

Harn Ko's twisted incurve and its soft clear mauve tint is different from anything I know of. It is one of the very latest, and valuable on this account. H. Waterer is another good sort in demand for late cutting on account of its brilliant color. This variety is a little difficult to grow, but does well from late struck cuttings.

Yonitza and Miss Meredith are in use for late crop. Mountain of Snow is a regular mountain of growth, but produces a good flower on top. I saw a fine batch of this variety at John N. May's a few years ago. Jessica is by no means out of date for early large blooms, and Minnie Wanamaker is as stately as ever.

I find Harry E. Widener and Edwin Molyneux rather inclined to be variable. Both these varieties, though introduced with a flourish of trumpets, are not nearly so much in demand as they were. Have they deteriorated? Curly yellow Yeddo is not half bad when well done, and the tangled golden shock of Mrs. I. C. Price charms the eye at once. Thos. C. Price is labeled "crushed strawberry," though it doesn't look at all "sat down upon," but is too stiff and solid an incurve.

Le Tonquin is a reflexed type of flower, with crimped petals spirally twisting after the form of a cork screw of peculiar effect, while Ben d'Or is a veritable little bunch of yellow pine shavings.

Marvel is as distinct in its contrasting color as Pitcher and Manda. When it was considered a novelty grand bush plants were shown at the Philadelphia exhibitions. At night no fair maid present had such a lovely pink and white complexion.

Lillian Bird is still another type—good when well done. Its color is charming—nothing "off" about it—just the right tone. We sometimes grumble about the odd shades of many chrysanthemums as being of little value to the general florist. Take my word for it, they are "not in it" with sweet peas. Some of the "new" colors are simply "horrid."

Mrs. D. D. L. Farson and Lizzie Cartledge are good samples of the greatly improved reflexed type. Mrs. Fottler is the best of its class and type. Its silvery shade of rosy lilac is a better tone of color than any of its numerous seedlings. At maturity its soft fleecy outlines the ladies term "fluffy," "Just look at that big fluffy flower," they say, "isn't it sweet!" Mrs. Irving Clark of the pæonia type is too coarse to suit me, but commands re-

spect for its size, "big head and little in it" is what I say of it.

W. N. Rudd is probably the best of the elks-horn type, and John H. Taylor represents the reflexed *plumed* flowers, white delicately shaded pink. There are several good ones of this class, all popular as cut flowers.

Mrs. E. D. Adams is an exhibition variety of the "swirled" type, of huge size at its best. It was well advertised at the time of its debut.

Mrs. J. G. Whilldin has been well received from the first. Pity Gloriosum has such a weak stem, otherwise there would still be room for it. Mrs. J. N. Gerard and Rohallion are struggling hard to hold their own with the new comers. Will they do it? Mandarin, an early Indian red, resembling Tuxedo in shape, did well with me last year. I was surprised to find it so good.

When Geo. W. Childs doesn't burn it is fine. What furor and interest it excited when it was first placed on exhibition at Orange, N. J. The rose Waban was also shown in excellent form at this time. I never saw it so good elsewhere. Strange

WM. J. STEWART

Secretary of the Society of American Florists.

it should have so deteriorated! How do you account for it?

Shasta, Mrs. W. K. Harris, Eldorado, Mrs. A. Carnegie and others are too difficult to grow to be satisfactory. If weak stems must go weak growers will follow suit. As evolution unfolds its plans it is plain to be seen that only the fittest can hope to survive.

What may we expect ten years hence? Will the standard varieties of to-day hold their own, or do some kinds deteriorate? It would almost seem so, judging from the past. What do you think about it?

Tubiflorum, Ismail or Thistle, Golden Thread, Medusa, Val d'Or and Mme. Hoyslet are especial curiosities among the entire chrysanthemum family. The latter because it is the smallest of the tribe, but half an inch in diameter!

Chrysanthemums do well in the south, the West Indies, and in South America, where the thermometer runs up to 160° in the sun. You meet with the Chinese section more than all the others, and there is no regular season of bloom. They go at it when they feel like it, and are in proper condition.

The first chrysanthemum I remember to have seen was a magenta pompon 'way back, when I was a little chap some thirty years ago. As I recall it now it was a shapely plant, full of flowers, standing in a bow window of a friend's house. I noticed it in passing. I stopped, looked, went in and admired. Just to think of it! A plant like that in full bloom 'way into November! Florists were a rara avis in those days. A tea rose was a novelty, coleus almost unknown, no double geraniums, palms seldom seen, and so on. Times have changed! Do you manage to

keep your end up? progress, and not fall into slovenly retrogression? As little orphan Annie says:

"The gobble-uns 'll git you,

Ef you

Don't

Watch

Out!"

Gradually I became used to seeing chrysanthemums; and the rich yellows of the Chinese section began to show up here and there. Early in the seventies I grew *Laciniatum* for cut flowers. I thought it was an awfully pretty thing, and still think so, though it has been crowded to the wall by the big fellows that have come after and rule the day. Bulls and bears have the best of it now and control the market. Not much show for pompons and anemones! Both these classes resent the injustice of being placed so entirely in the background.

M. Charles Lebocqz is the most violent in his vituperation, as he was the representative leader of this class. A fellow who has been "cock of the walk" doesn't enjoy being knocked from under, 'tisn't human nature, and please give chrysanthemums credit for having "feelings" as well. Thirty years have marked marvelous changes in the old time *artemisia*—as it was called then. How long ago is it, some twelve years—'81-'82—since was introduced to America a set of imported "mums"—among them the Japanese varieties *Gloriosum*, *Mme. Desgranges*, *Lady S. elbourn*, *Mme. La Croix* and *Fantasia*? Well, they were great, were they rot? The interest and enthusiasm excited by these early adventurers, with John Thorpe at the helm, has worked wonders, and made "Uncle John", as some one has said, the godfather of the chrysanthemum in America.

In this connection I would mention the valuable service of H. Waterer as importer and introducer. I would not forget the obligations that are due the veteran W. K. Harris. I honor that man for his grand service to the "mum" as well as his knowledge and skill in other lines of the

H. B. BEATTY.

Treasurer elect of the Society of American Florists.

florist's art. In the wake of these early beginnings a noble host have followed on. They are all representative men known to you all. I need not particularize. Thus was the success of the chrysanthemum assured by the painstaking study of practical workers, and improvement has been both steady and rapid to the present time. So thoroughly has the subject been entered into by these experts, reducing theory to practice in the matter of seeding and hybridization et al, that we have even discounted the Japs. American chrysanthemums abroad are receiving high honors, and the most distinguished attention, same as our ladies always command. God bless 'em—the ladies!

What improvement *can* be made remains to be seen. Certainly not any great stride as to quality, substance and

build of flower blooms, the standard sorts are really quite good enough in this respect, and habit and growth is about what it ought to be, sturdy and short jointed. There will doubtless be many new shades and tones of color, probably a much brighter red, possibly a blue (not dyed in the wool), and again distinctly striped and variegated kinds if you care for them.

What size they will attain, too, is a matter of conjecture and speculation. The big Japanese sort referred to is quite single and not what we want. Let the good work go on, I say, but at the same time, attention growers. Look to your laurels. Don't attempt to gull either the unsophisticated public or the poor florist with anything inferior to what we already have, or we'll cry out with the small boy "what ye givin us?" No, indeed, it won't work, we have had enough of this sort of business along back. Let's stop it.

But we will accept a Vigilant for outside breezy water and white-caps, if she can hold on to her center-board, and award the cup to Britannia for inside work. There are Vigilants and Britannias among chrysanthemums, both good in their respective place, and excel under certain conditions either for cut flowers or exhibition.

How old is the chrysanthemum? It is as old as the hills, ye flower of the gods. Yet I have never been able to find out definitely—the Japs won't tell us for a fact, and the Chinese keep "mum." Anyway, it comes to stay, so what's the odds! It doesn't hardly do to rake up ancestors, rarely is it wise, we might unearth skeletons and skeletons are not always dry bones, they sometimes have unsavory odors. Isn't it enough that it's the biggest flower out, and likely to remain so?

As we have already said, it is the flower—par excellence for decorations and general decorative work. Apropos of the common fault is over-crowding.

I have one or two chrysanthemum "yarns" before I close.

A customer came into my store last November when "mums" were in good display. "Vell, how you vas, mein Herr. My! shiminiel! ain't dose nice ein grosse posy blumen," pointing to a vase of big fellows. "I vants ein sausage bokay vor mein bestest girl." "A sausage bouquet?" I thought a moment—"Ah! I suppose you refer to a corsage bouquet?" "Ya, dot ist so." "Well, one of these large blooms will be amply sufficient, I think." "I mind notings the price, Katrina ein schöne fine fraulein, makes your eyes most water, see 'er pooty vace. I dakes de vohl lot," and he did.

Katrina must have been the bloom-iest girl out mit her big "sausage" bouquet.

I had an order for a church wedding, the bride's bouquet was a huge bunch of Ivory "mums," to be carried by a small boy as page. It was a comical sight to see the little chap stagger under his load. For once people forgot to look at the bride.

A young minister, who was inclined to take love for a text, as parsons sometimes do, was courting a pretty girl, a musician to-wit. One day he took her a box of chrysanthemums, but she was not at home, so left them with Bridget, who passed them over to her mistress as "Christian anthems," that Rev. so and so had sent her, with his compliments. Without undoing the parcel she returned the same with a curt note "That she preferred to select her own music."

What's in a name? Anything that

smells as sweet would be a rose! Shall it be plain "mum," chrysanthe, or chrysanthemum?

Let me not entirely exhaust your patience. I close with this toast:

Here's to the health—a votre sante—of every American florist, man or woman, born of any nationality, so long as their feet are on American soil, American good will about them, and America's blue sky is over all—*provided*—that they pin their faith on the chrysanthemum.

Cannas.

BY J. T. TEMPLE, DAVENPORT, IOWA.

[Read before the Society of American Florists at Atlantic City, N. J.]

A class of plants that is becoming very popular is the cannas. They are rapidly crowding the geranium for the first place in bedding plants; their beautiful and massive foliage stamps them as one of the best decorative plants for all purposes, especially for use in greenhouses, halls, dwellings, etc., while for the lawn, they are one of the most satisfactory plants grown, blooming from June until frost, rivaling the improved gladiolus in size of blossom, and the brilliancy of coloring of the various shades of red and yellow flowers.

The name canna is, according to some authorities, derived from cana, the Celtic name for reed or cane. They are mostly natives of the Indies and South America. They are easily multiplied by seed and also by division of the roots. Of late years there has been a great improvement in color, size of blooms, and dwarfness of habit of the plants; especially in the hybrid seedlings raised by Mr. Crozy of Lyons, France. Mr. Crozy is entitled to great credit for the improvement and introduction of the fine varieties as are called the Crozy cannas.

A good many good seedlings are being raised in the United States, and there is no reason to doubt that with our fine climate and soil that we can produce finer varieties than are yet in commerce. After we have obtained the ideal pure yellow canna with large blossoms we should turn our attention to procuring a strain of foliage cannas, with the beautiful colors and markings of the crotons and phrynium, and the elegant shadings and color of *Dracena terminalis*; then the canna with its gorgeous flowers, and the size and elegant markings of foliage, would possess most every quality that the most fastidious would desire. It is feasible as we already have reddish and purple foliage in numerous cannas, and the yellow shade and some markings, as in *Canna Breningssii*.

From the 1st to 15th of April we divide and start the canna in the greenhouse, or in a mild hotbed, in 6 or 8 inches of soil, preferring the hotbed, as it seems more congenial to them, dividing into one or not more than two eyes to each piece. These make larger growth and foliage than if more eyes are left. When they have attained a growth of about a foot high, say about May 20 (with us), we plant out in open ground if the weather is suitable, if not we pot them until ready to plant out. In very windy situations it is best to plant them out as soon as the first leaf shows above the ground; they do not break off so easily, and are harder and stronger than plants forced to a lengthy growth caused by starting them too early. To be effective the beds should not be too large. Wm. Robinson, in *Sub-Tropical Gardening*, truly says that enormous meaningless masses of them are things to avoid, and not to imitate. The best size of circular bed to

plant the tallest varieties in is from 15 to 20 feet in diameter, made level (with very rich soil, one-fourth of good manure, not too fresh), a little below the surrounding surface, so that the water will not run off as it would do if raised. If the bed is larger than 15 to 20 feet in diameter for the tallest variety it will look low and squat, and if smaller it will look too high. A study of the height of the various sorts will prove a good guide for diameter of bed; the taller the variety, the greater the diameter, and vice versa for the smaller varieties. A proper planting for effect, whether for one or more seasons should be one of the main ideas of the thorough gardener, but as long as our profession is so truly empirical, so long will the general public regard the civil engineer with more favor or his opinions with more weight than those of the horticulturist.

After they are planted we give them a good watering; then when they have started to grow rapidly, say about July 1, we place the hose on the ground in centre of the canna bed, and let the water run slowly all night. During the warm growing season they cannot have too much water at the roots. I do not advise watering the foliage in beds more than once a week when they are in bloom, as it spoils the flowers, rendering them unsightly and making them fall off much sooner than otherwise. Keep cutting the old flowers off before forming seed and they will bloom continuously until frost.

A well grown canna is an addition to any kind of architecture, and is suitable for planting at base or side of steps and porch. They are very effective planted in clumps or singly along walks in lawns, and are useful for screening unsightly views. A very handsome bed is one of all one color, say Chas. Henderson or A. Bouvier, with a border of some of the dwarf yellow varieties. In a neighboring terrace lawn the owner has planted clumps of the improved cannas (assorted) at the foot of three terraces, and the plants 5 to 6 feet apart. The effect is very pleasing, especially with the grass background. At the World's Fair, between the Horticultural Hall and the greenhouses, were 2 novel round beds raised 8 to 12 feet, the mounds being made, so I was informed, from old boxes, manure and refuse sphagnum moss and soil from cleaning out the greenhouses and sheds. They were planted chiefly with Mme. Crozy cannas, yuccas, ricinus and smaller things to fill bare spots. Being so high they were very effective and showed well John Thorpe's skill and the capability of the canna as a decorative plant.

They are easily grown from seed, blooming the first year. Soak the seed in warm water for 24 hours before planting and most all will come up. There are some good varieties raised this way (especially from the newer sorts), and it should be encouraged, but my advice would be to throw them all on the rubbish heap, unless they are decided and very distinct improvements on such varieties as Chas. Henderson, Alphonse Bouvier, Florence Vaughan, Capt de Suzoni, Mme. Crozy, Paul Marquant and other good varieties now in commerce. If you raise what you think is a new and good sort it would be better before disseminating to send bloom and plant to some canna expert, who grows in large quantities the improved sorts, so that they can make comparisons, say J. C. Vaughan in the west and Dean, Pierson or Dreer in the east. Or, better yet, start a canna society, auxiliary to the S. A. F.,

VIEW OF THE GREENHOUSES OF MR. ROBERT CRAIG, PHILADELPHIA.

which would register and test all varieties before they were disseminated; it would save trouble in canna nomenclature. Some of our European brothers are very extravagant in descriptions of varieties which sometimes need a microscope to detect the slightest shade of difference in color, as many of our importers of roses, geraniums, cannas, etc., know to their loss, so go slow until some other fellow has tested them.

In propagating a new variety for dissemination do not divide too often, as it weakens the stamina and the variety is often condemned, when it has been weakened by over propagation. When Mme. Crozy was first sent out I bought stock and commenced to divide, and did so until the foliage was no wider than corn blades, and most of the last division had to be thrown away, for they never made good plants.

Insects.—The canna is, for the size of its leaves, remarkably free from insect pests. I have only noticed red spider on plants this year that could not be reached by the hose, and on early planted stock a small white hairy worm (name unknown) which rolled up the leaves and cut holes in them, disfiguring them badly; the only remedy I know is to hand pick; I have not seen any of these latter insects since July 1 this year.

Taking up.—The first day after frost I cut off most of the tops, leaving a few leaves on, then take up and plant, without dividing, in boxes in sandy soil, then place in light cellar or under bench in greenhouse, care being taken to see that they are given only enough water to prevent drying up, and not enough to cause rot. If I have plenty of room we plant on greenhouse bench and keep growing all winter, and at Christmas and Easter the flowers pay for their keeping.

Qualifications.—A good canna should possess good foliage, a sturdy habit, a large flower, composed of wide and not too long petals of good waxy substance, on a stalk rising well above the foliage, and a good bright color. The flowers on the stalks should not crowd one another too much and need not necessarily be upright, as is the standard set by some, but may droop, as in the *Iridifolia* or *Ehemanni* type; to some they are more graceful and beautiful than the upright type.

For years I have been testing all the new varieties as they were introduced. Some

were extra fine, but many should not have been sent out; some had new shades and markings, but lacked substance and breadth of petals, etc. Some years a variety would do especially well, and the next year a variety that was poor the previous season would take first place. Some plants of a variety do better in some locations than in others, planted at same time and given same treatment.

The best 12 grown this year by me of the previous introductions are:

Chas. Henderson, of its color (rich vivid crimson) the best canna to date; petals wide, not too much reflexed and of fair substance; very desirable planted singly, at side near foot of entrance steps to residence, also good for beds of all one color.

Florence Vaughan (the gem of all cannas), color bright golden yellow, thickly spotted with bright crimson; petals broad, not too long, and of good substance, flowers lasting well this dry season. Very desirable planted in same way and as a companion plant to Chas. Henderson. It is not quite as showy as Capt. P. de Suzzoni for a bed of yellow on account of the large bright crimson spots neutralizing the golden yellow. I think it is the best type of canna to date and advise all to plant it. Your committee on nomenclature cannot have given to cannas the careful consideration which the prominence of this class would justify. The variety Florence Vaughan was purchased and named by the introducer in this country in the fall of 1891, while Anton Barton, which that committee claim to be identical, was first offered as a trade novelty for the spring of 1893. A canna committee or society would prevent the circulation of such inaccuracies.

Alphonse Bouvier, the brightest canna for bedding (richest crimson), and will always be in demand; makes grand mass beds; seems to have some *Ehemanni* blood in it, as when the second flower opens on the spike it spreads or droops, same as the *Iridifolia* type, and gives variety and style to this class of plants.

Capitaine P. de Suzzoni is the best yellow for planting in solid bed of one color; it is not a pure yellow, but a canary yellow shade lightly spotted red so as to intensify the yellow shade. (Extra good.)

Mme. Crozy keeps up the reputation of being the most free flowering of the Crozy type of cannas; too well known to describe. No one loving cannas can do

without it; it generally comes true raised from seed.

Paul Marquant is another grand canna hard to beat, color salmon scarlet.

This season the best dark or purple leaf variety is canna *Geoffroy St. Hilaire*, a splendid variety for mass beds; flowers orange red.

Another equally good purple leaf canna is J. C. Vaughan, with larger and darker flowers than the preceding; an extra bloomer.

J. D. Cabos and President Carnot are both good varieties that cannot be dispensed with, though J. D. Cabos fades out considerably this dry season.

Count Horace de Choiseul is a variety giving satisfaction this year, though it has done poorly with me for the two last seasons.

Mlle. de Crullion should be planted for its odd shade of yellow, shading to terra cotta; it is a free bloomer.

Everyone should have some plants of C. Ehemanni, with grand foliage and beautiful drooping carmine flowers on stray stalks, entirely different from other varieties. It is a gem when well grown. There are other good varieties, as Paul Bruant, Trocadero, H. Vilmorin, Egandale, that did well with me last year, but the above named are the best this year. Of the newest or later introductions that I am testing or have seen, the first one, Koenigiu Charlotte, very brilliant scarlet with a broad band of golden yellow, flowers of good size and substance, petals not very broad; it will become very popular, a decided novelty. Paul Sigrist in color is an improvement on Mme. Crozy, but the flowers lack substance and do not last well; it may improve with cultivation.

Lemoine's Eldorado is a grand blooming canna, color light yellow, good sized petals and good substance.

Columbia, an Iowa raised seedling, raised by Kramer & Son, as seen at the Chicago Exposition, also in 1892 at Marion, is a magnificent variety; color bright red; flowers large, upright and supporting one another well on the stalk. Gives promise of being a standard sort in first class. Orange Perfection is another variety that I am testing this year, a dwarf; the color orange scarlet. I do not think much of it with this season's trial.

The following varieties, seedlings raised

by Mr. Crozy and under control of J. C. Vaughan, are extra good: My notes of varieties at the Chicago Fair show 103 and M. Mesnier, 107, Chicago, 118, and 124 not named, were extra in 1893; this season they have kept up their high standing. No. 124 is in style and color of F. Vaughan, but larger flowers. Magnificent, No. 116, P. J. Berckmans, 126, J. W. Elliott, and 127, Mme. A. Bouvier, are all good sorts; also 100, F. Guillard. Another variety worthy of mention is Admiral Gervais.

In the exhibition hall at Atlantic City were three varieties that are identical, viz., Florence Vaughan, introduced 1892; Anton Barton, introduced 1893; and Comte de Bouchard, 1894; it is not right for the French growers to do this, and this society should appoint a canna committee to devise a remedy.

Recollections of Atlantic City.

Your correspondent from Buffalo was away from home and knows little of what occurred, but found the beautiful city in the same place and everybody well. The few hours that have elapsed since his coming home have been spent in sweet reverie of what he saw at the seashore, and particularly among the brotherhood of florists, and here is what he recollects:

That the convention of 1894 was a success in every way. The balmy breezes of old Neptune were a benefit to all.

That you could eat more, drink more and retire later, and yet come up smiling in the morning beyond all expectations.

That Grove P. Rawson's recitation on chrysanthemums reminded one of the Comanche war-whoop—"once to be heard to be remembered forever." It was a pyrotechnic display in words. Its delivery has never been equalled in the history of the society.

That the beads of perspiration on Burt Eddy's baldness after the impersonation of "Sir John" were the largest and purest up to date.

That there was altogether too much flirting going on by alleged single men on the different hotel verandas.

That there were fewer cases of an exuberance of conviviality than the writer ever remembers on any similar occasion.

That Little Woodie seemed to have decreased in stature at least $\frac{1}{8}$ of an inch, but had made up for all that in a remarkable amount of snap and ginger.

That Jackson Dawson and Prof. Cowell wasted a good many valuable hours in hunting weeds in the New Jersey swamps, but from their gait and talk they seemed to have found something else.

That it was a pity the members were so much scattered. Half a dozen men from a distant town were domiciled in four or five different places.

That there was an unusually large attendance of the fair sex. This largely accounts for the remarkably decorous behavior of the vast majority of the members.

That the sights from the board walk were to a greenhorn something entirely novel and inspiring; all conceivable shapes and sizes were there, but so great was the variety that even oddities passed unheeded.

That the shooting was ably managed by Mr. J. Burton and was a very pleasant and exciting feature of the last day. The referee, Mr. C. D. Ball, was indisputable; not a decision was questioned and harmony reigned supreme.

That the candidates for the presidency were better friends after the election than before if possible.

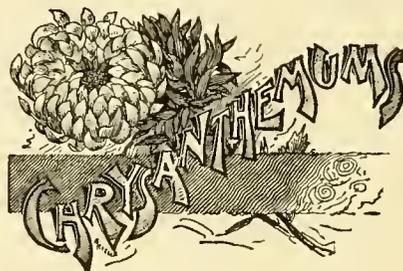

That New York and Philadelphia utterly ignored the existence of any other bowling team except the two and found that in bowling as in horse racing the unexpected often happens. Take warning from these young men and place more dependence on your veterans, even if they be counted "scrubs" at home. It's the veterans who will support the banner when it comes to public performance.

That there is a little room in Buffalo adorned with three silver cups and a beautiful banner, not to mention a corkscrew, for all of which we are devoutly thankful.

That we shall try never to forget the great hospitality of the Philadelphia club in every way—solids, liquids, kind words and all included.

And last, but not least, that John Westcott is without reserve the most whole-souled, happy, respected and influential manager that was ever put at the head of a bowling committee or any other committee.

Finally, when we can get a "mum" 2 feet across with a stem of the similar dimensions of the underpinning of W. K. Harris we will have the ideal flower, and now we hope to *Kiff* ourselves in good order for Pittsburg. W. S.

Chrysanthemum Notes.

The plants for the last month have grown very strong, and where they are in shallow benches have probably filled the same with roots and have extracted the best part of the loam, and unless heavily manured at the start will need top dressing. A close watching of the plants will easily tell one whether this is needed or not, for if they begin to flag or the foliage begins to grow smaller it is exactly what they want. Top dressing at this time is far preferable to so early liquid manuring, and makes a splendid mulch for the roots that are near the top of the soil.

If there wasn't bone enough worked into the compost give the soil a good dressing of flour of bone now and carefully scratch it in with a weeding hook. Carefully here means with great care, for the roots are near the top and will be broken if this advice is not heeded. If the bone is not worked into the soil as soon as the water is turned on to it it will form a crust like plaster, and the plants will not get the immediate effect desired. Cover the bench then with a coating of manure. Cow manure is preferable, but don't use it too green; manure that has stood through the summer and been turned once or twice is just what you want.

Some growers advise the taking off of some of the lower leaves, but we doubt the expediency of this, and fail to see any good reason for doing so, and if overdone and too many leaves taken off it will surely be detrimental to the growth of the plant. The leaves are the lungs of the plant; that is, they perform similar duties in the organization of the plant to the lungs in the human body, and the more leaves the plant can carry the better for its growth and product. So rather than

to strip off the leaves we would much prefer to give the plants plenty of food and water and keep them on to help the plant finish its bloom. Of course if any of the leaves turn yellow or brown and lose their life, as they sometimes do when they grow very thick, we immediately remove them.

If an exceptionally fine looking crown bud now makes its appearance we would advise taking it, and tag it and make a note of it in the book, but we do not mean to advise the taking of all the buds of any variety yet. Just select one or two for an experiment, and trust the balance of the plants to a later bud which we know will give a good flower. But from these one or two of a variety you will know what the late August crown will produce. However, don't try any of the darker varieties, especially reds, for the crowns of these are practically worthless anywhere, for the bud is so long in maturing that they fade and look washy when finished. E. A. WOOD.

Judging New Chrysanthemums.

In the course of a correspondence with some of the leading raisers of new chrysanthemums a mutual interchange of views on the subject of judging seedlings occurred, which induces me to give some views on the subject.

All growers, raisers and dealers in new chrysanthemums agree that something should be done by the national committee towards the formation of a tribunal to which all new varieties seeking honors should be sent. This would simplify matters enormously. The standing committees of the various horticultural societies are not fully competent to deal with so important a matter, and the result is a great number of new varieties, in many respects similar, and often inferior to those already in cultivation, are yearly thrown on the market. I would suggest this matter for the consideration of the S. A. F. at their next meeting at Pittsburg, and I herewith enclose my views on the subject:

A committee of five experts of national reputation should be selected, representing the florist (grower and retailer), the gardener (professional and amateur), and the flower artist. There should be three meetings about the 20th of October, the 5th and 20th of November, at some central city like Buffalo. Some competent man should be selected to superintend the arrangement of the exhibits, and put up those received from growers who could not attend. T. D. HATFIELD.

Sowing Pansy Seed.

In the article on sowing pansy seed in the convention number, I think that Brother Scott was rather prompt in passing judgment on the process of mulching the seed beds, as I recommend to my customers, and if he could see my seed beds now, he would surely concur in my opinion. Last season, in August, under that process, in open field, I sowed 8 ounces of seed broadcast, and in ten weeks' time had sold 78,000 young plants from these two beds, each 150 feet long by 3 wide. This season I got in about two pounds of seed the same way, in the open field, as where in the world could I have had frames and sashes enough to do it all?

I used formerly, as Mr. Scott suggests, drill in the seed in frames, but at a considerable expense of time and labor, as young plants grown so thickly together will require immediate attention, or else damp off or get drawn up, while under the mulching process, sown broadcast

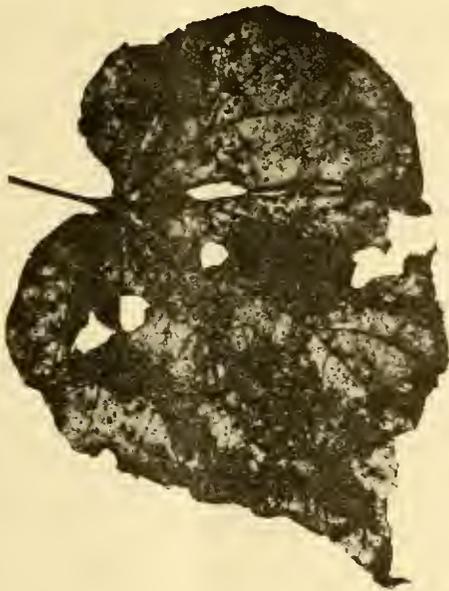

Fig. 1.

NEMATODES IN BEGONIA LEAF.

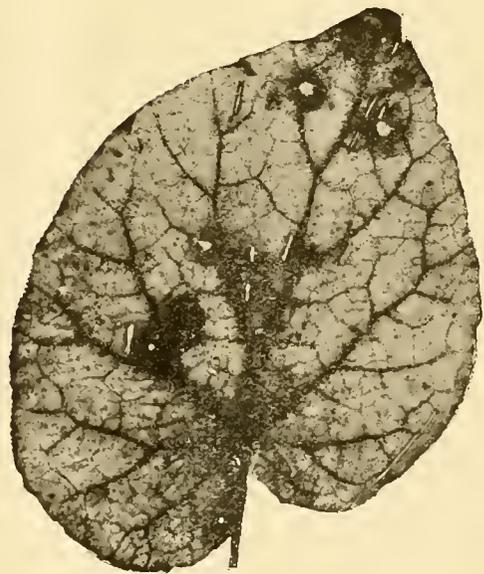

Fig. 2.

LEAF SPOT OF BEGONIA.

and thickly in open field, the plants can stay and grow for months without interfering with each other, till either sold or transplanted, and are also more stocky and hardier than when grown in frames.

Seed is sown and mulched, as I recommend, requiring no further care than an occasional watering, which we do with our hose sprinklers, connecting with my large tank, and removing them every hour. Such a watering over the mulch will not beat the ground hard and keep the ground moist for several days; at the end of two weeks the seed will be up, when I remove half the mulch with a fork, to give air and light to the seedlings, and in another two weeks the balance of the mulch is removed off with a wooden rake, and with occasional weeding, is about all the work required. Perhaps I was not explicit enough in my advice on sowing, as I do not cover the seed at all, only brush it in lightly before pressing in. I half suspect that in several cases our friends covered the seed too thickly, and it smothered some.

I have, on the whole, congratulated myself in getting to use such an effective and expeditious way of raising pansy seedlings.

DENYS ZIRNGEBEL.

Begonia Diseases.

The samples of diseased begonia leaves forwarded to me from your correspondent did not arrive in good condition, and I am not fully able to state just what the trouble is. There are two leading diseases of the leaves of the begonias, and photographs of these are sent you for the purposes of engraving, for these troubles are sufficiently abundant and distinct as to warrant space being given to them.

The first and, so far as my experience goes, most abundant trouble is the one shown in leaf number 1. This unsightly and ruined leaf illustrates the inroads due to microscopic worms known as nematodes or eel-worms. They thrive in great numbers in the loose moist tissues of the begonias, and when in the leaf cause large irregular blotches, which after becoming brown and lifeless fall away and cause the ragged appearance as seen in figure 1.

Many other plants of the greenhouse

and open ground are troubled with the nematodes. In many cases they are confined to the roots, when knots and galls are produced. These may be met with among violets and more particularly with hot house roses, where they are a serious pest. Truck crops, as tomatoes, radishes and the like also suffer from the nematodes at the roots. Among plants that are affected with these microscopic worms in the foliage may be mentioned the coleus, bouvardias and pelargoniums. Buried as they are within the substance of the leaf there is very little use of spraying the foliage, and all diseased parts should on the other hand be removed and destroyed.

The second form of begonia disease is due to fungous parasites, there being several that cause a spotting of the leaf in a manner shown in figure 2. Often the spots will be small and numerous, and again they are few and broad in extent. These fungi are like other leaf spot fungi, some of which have been treated of in the *FLORIST*. They can be controlled without doubt to some extent at least by using the standard fungicides as sprays upon the foliage.

The leaves received from you were of the second group, but, as before stated, were not in a good condition to determine the species of fungus that had done the mischief.

BYRON D. HALSTED.

New Brunswick, N. J.

Best Method of Wholesaling Cut Flowers.

[Read before the St. Louis Florists' Club by Mr. C. W. Wors.]

The subject of this essay requires very careful consideration, and I ask of you your indulgence, as I have to write about as much in reference to the retailer as I have the wholesaler, sincerely hoping to offend none.

I will speak firstly in regard to what the grower should expect from the commission man or wholesaler. First and foremost, a square and honest deal, that is, that every dollar of sales made by the commission man should be rightfully turned in to the grower, and if he cannot make honest returns for 15% let him charge more. I maintain that if the

grower ships good flowers a good salary can be earned at 15%, but if he sends poor flowers he should pay the commission man a salary for handling the same. In my experience I have always found it easy to get rid of good flowers and very difficult and discouraging to get rid of poor ones.

Now in regard to the market and price of cut flowers: Flowers should be sold first and foremost according to their quality, no matter whether the market is glutted or not. Secondly, flowers should be sold according to supply and demand, whether it be summer or winter. It may seem strange, but nevertheless it appears to me that good roses should command a good price in summer, first because roses, especially good ones, are very scarce, and as people don't buy flowers in summer unless they really need them a good price can be obtained. And as a more uniform price can be given in summer to the grower, he can afford to sell his flowers at Christmas time cheaper and prevent the greatest detriment to our business, the uncalled for high prices during the Christmas season.

If the growers could obtain better prices from October to June, I mean a better average price, they would be satisfied with a less price at holiday time. To illustrate this I may mention that in conversation with a large grower over these high prices at Christmas he offered me his whole cut of roses for the season, including Beauties, at 3 cents each, so according to his own figures he could make money at these prices. Of course I could not handle his flowers in this manner and do justice to my other growers. He said that the average price received for his roses compelled the high prices at Christmas. Let the retailer help the wholesaler and grower out by keeping up prices, and instead of lowering the florists' business to a jobbing standard let him elevate it, being assisted by the grower, who would strive to grow only flowers of the finest grade, and whose maxim should be quality and not quantity.

The grower should, as I said before, grow flowers of the finest grade, but let him be paid for his trouble, let him know

his flowers are sought after because they are superior and at the same time let him have a few dollars extra for his trouble. Let him also ship his flowers and pack them carefully, many a dollar being lost to the grower on account of careless packing, and many a rose on account of not being cut at the right stage or having been kept too long before shipping. There is also a very foolish custom at holiday time of holding back flowers which could have been sold at good prices had they been shipped, and which when they arrive are in a worthless condition, a total loss to the grower and a big disappointment to the wholesaler and retailer.

Now I propose to read what I believe to be the very best way for a wholesaler to treat his regular buyers. I don't think it is right for the wholesaler to favor one customer more than another, but there are certain circumstances which should be considered by the dealer in conjunction with his shippers and buyers. In certain cases the retailer should get certain privileges from the wholesaler, and I shall endeavor to explain these privileges to the best of my ability, and trust that if there are parties present who do not agree with me they will get up and declare themselves when this essay comes up for discussion.

Now in regard to these privileges which I think should be given by the wholesaler to his regular buyers: When a grower ships his flowers to a commission man he takes the entire risk, and a big risk at that. He has already grown these flowers, risk number one, and number two when he ships them to be sold. When a wholesaler has a buyer who buys daily a certain number of each kind, and who daily lays in a stock of flowers for his store, these flowers not being ordered perhaps, he, the buyer, then takes his place with the grower, that is, the grower with whom he shares the risk. The buyer not having the flowers ordered stands a risk of losing these flowers; these buyers should receive a percentage off the marked figure, in preference to the buyer who only purchases when he has an order or when he receives a message through the telephone. The latter class of buyers do not require to make the profits that the florist does who shares with the grower the risk and buys his flowers without having an order for the same on his file.

Then again a buyer who pays his bill every week without a murmur and who does not require you to wear out your shoe leather ought to receive consideration from the wholesaler, and I know that my shippers would be perfectly willing to get a little less for a certain sale than a larger price for an uncertain one, especially when the grower receives a weekly settlement.

Now there is another matter which concerns the wholesaler, grower and retailer—the selling of job lots, or in other words, the selling of poor flowers at reduced prices, my opinion being that the selling of job lots hurts both the retailer and the grower. If flowers were grown for quality only there would not be that glut of flowers; it appears to me it would be better to give away a few flowers rather than lower prices. But if this jobbing must be done let it be confined to the fakirs and to parties who do not confine their sales to flowers alone.

Let every reputable florist stand up for his business; let him not bring his trade down to the level it has gradually been working to; let the grower grow a fine grade of flowers, and let the retailer get a fair price for the same, and then there will be good times for the florists again.

Why, to think of the energies of our flower loving growers, who have spent their lives in trying to beautify and improve by cultivation the work of nature, and then to see their work brought down and men who handle flowers care so little about it that they lower their standard by making sales of flowers at the level of other commodities. Let all the florists work together to elevate the trade, and by doing this they will help themselves and help the grower.

Worms Attacking Cannas.

We are very anxious to know if there is a remedy for the worms which are so very destructive to the beautiful foliage of our cannas. We notice two kinds. One is a small worm at first which is concealed under the edge of the leaf and which soon grows to be a very large worm. The other is apparently the caterpillar. Is there anything to destroy them?

J. M. CONNELLY.

Charleston, S. C.

The above inquiry was referred to Mr. F. R. Pierson, Tarrytown, N. Y., who replies as follows:

"Your inquiry in reference to worms at hand. I have never known any kind of worm to attack foliage of cannas and cannot give you the information. It must be a caterpillar indigenous to the south, as nothing of the kind attacks cannas in this section, and have never seen the foliage marred in any way. From Mr. Connelly's description I should presume it was of the caterpillar order. Any insect that eats the leaves can be easily held in check by insecticides; would recommend Paris green or something of that nature."

Chicago.

Our handful of pilgrims to the convention has returned in a most enthusiastic frame of mind. Every member is loud in his praises of eastern hospitality, and all are agreed to have had a most enjoyable trip, and a royal good time generally. This is rather tantalizing to the "stay-at-homes," and makes them feel more blue than ever. With the majority, as is well known, it was through no lack of interest which kept them at home, but with them it was simply Hobson's choice. The annual resolution regularly made, and as regularly broken soon after, is now on the program. To put by the sum of 50 cents every day from now until the next convention day arrives seems an easy way of accumulating the necessary funds for the purpose. A number of the boys stick to this resolution religiously for three or four months, but alas, that is often the limit.

The aquatics at Lincoln Park are looking very fine. The ponds as viewed at present are worth a visit from all lovers of this class of plants. That the display is appreciated by the general public is well demonstrated by the admiring thousands who daily throng this section of the park. The most showy varieties at present are *Nymphaea Devonensis*, and several other red varieties, notably *N. Sturtevantii* and *N. rubra*. *N. zanzibarensis azurea* is also in fine bloom. *N. gigantea* shows but two open flowers, but these are superb. *N. dentata* and *N. scutifolia* are also in fine bloom. The *Mariaceae* section is well represented, and all the plants are well flowered. The *nelumbiums* are still in bloom, but a trifle past their best. The two specimens of *Victorias* may be seen with an open flower apiece each day.

The flower beds are now in fine shape. Among the most striking objects in this line is the gorgeous display of cannas. The perennial borders are brilliant with color, and never looked better. Phlox a little past, is still very showy, but among the most effective at this season of the year are our own native prairie flowers. There is a large variety of them, notably such forms as *helianthus*, *silphiums*, *Lobelia cardinalis*, *lythrus*, *asters* and many others. It is rather amusing to listen to some of the comments made upon these flowers by some of the visitors. We noticed the other day a couple of gentlemen admiring a group of *Lythrus superba*. One of the gentlemen, a well known resident of the north side (Lake View) was heard to make the remark: "What a remarkable plant! must be something new, as I have never seen it here before; looks to me like a tropical plant." Now this gentleman has resided in Lake View for many years, and he might find even to-day within a couple of blocks of his residence a number of vacant lots that are covered with this flower. But what might be said of this *lythrus* equally applies to many other varieties. Ninety-nine native born Chicagoans will admire these flowers when seen grown in our parks, but when met growing wild in the fields will pass them by as common prairie weeds.

The flower market is very quiet, and prices rule at last week's quotation—quality continues to improve.

Harry Mann and bride, of Lansing, Mich., spent a few days in the city on their way to Honolulu, Hawaii, where they will make an extended visit.

Indianapolis.

The August meeting of the Indianapolis Florists' Club was held at the club rooms Wednesday, August 1. The attendance was good in anticipation of the superintendent of Crown Hill Cemetery, Mr. Chislett, being present. He did not come, however, but excused himself and invited a committee to meet him at the cemetery most any time. This proposition was accepted and the secretary instructed to call the committee together at a proper time. A memorial written by the appointed committee, which was to report at this meeting, was presented and accepted without a dissenting voice. It sets forth that it is not the purpose of the Florists' Club to fight against the proposed exclusion of flowers and plants at the cemetery from a pecuniary purpose, but principally for the fact that should the new rule be enforced the sentiment of the general public would be changed against flowers in parks and other places. Cemetery work in general is not profitable to many florists, but they would not like to see flowers excluded from the cemeteries. Many well pointed paragraphs were included in the memorial; the same will be handed to the trustees of Crown Hill Cemetery and also to the Ministerial Association of this city. As this important matter took up a good deal of time the meeting adjourned.

Mr. Chas. Wheatcroft has added one house 88x13 for roses, and also has another house the same size under way.

Welcome rain fell to the depth of two inches August 10, but it also brought along a fall of hail, but only in the western part of this county; while quite heavy it did no damage.

Mr. A. Wiegand reports having had a very pleasant time traveling through California and the northwest. He thinks in general the greenhouse establishments he

has visited are not up to the times; they should receive more attention.

The writer returned from a pleasant two weeks' vacation to Elkhart Lake, Wis., a small but beautifully located lake encircled by a great variety of small and large evergreens and other trees. Arborvitæ grows here in great abundance, some extra large specimens seemingly being very old, and they certainly must be. Wild flowers, ferns and native varieties of orchids grow in abundance in the surrounding country; the drouth this season there, however, has cut everything short and permits walks through the swamps on soft beds of sphagnum.

The following appears at the head of many cut flower commission billheads:

PLEASE NOTICE.—These flowers were FRESH and CAREFULLY PACKED to reach you in GOOD CONDITION and shipped as directed on TIME. We are NOT RESPONSIBLE if they do not reach you on time, or in good condition as we do not regulate the RAILROADS or the WEATHER. A loss resulting from the above will not be entertained by us.

This does not seem to be just the thing; when one lot arrives in first-class shape another lot is shipped probably the next day under the same conditions as to weather, packing, etc., but comes in such poor shape that they fall to pieces or are black from handling. Does this not seem to suggest it is old stock kept from the day before or longer? A retailer when charged by a customer with having delivered shaky flowers in most cases can only replace flowers or money or lose the customer. Of course there are exceptions when complaints are too regular or when there is sign of fraud.

A communication from Cleveland appeared in your issue of July 26 headed "Look out for him." The same fellow has worked his game successfully in this town, claiming to be the patentee and sole agent for the wooden hose coupling. He wanted to establish an agency in this city and state. From samples he carried with him he sold several large bills to breweries and jobbing houses. He expected the goods every day, but claimed on account of the strike he could not get them. The writer, knowing him to have sold these couplings for many years, and it really being a good selling article, believed him and advanced him some cash and flowers; he also managed to get cash from a brewing company. Of course the hotel is loser also, but they have his trunks and belongings. He had a woman claiming to be his wife with him. His name is J. J. VanJulay, is forty years old, weighs 142 pounds, about 5 feet 5 inches tall, sandy hair, darker bushy mustache, wears gold spectacles, rather inflamed eyes which he wipes frequently, talks considerably broken English with German accent, claims to have been very rich at one time in the old country, and knew every prominent florist in this country. The fellow should be run down.

John Hartje, our young fisherman florist, is adding a house 140x12, to be planted with his new carnations.

It is proposed to change the name of the local club to the Indianapolis Floriculture Society.

The Indiana Horticultural Society held summer meeting and exhibition at New Amsterdam, Ind., on August 22 and 23.

W. B.

Toronto.

Not a drop of rain yet. The drouth is getting serious, especially to those who are outside the city limits, and who cannot make water flow by just a simple twist of the wrist. But the nights are lengthening, the days are not overpower-

ingly hot, and there are heavy dews, so that to speak figuratively "the wind is tempered for the shorn lamb." The beds in the parks and gardens don't appear to have suffered much yet, and are looking especially fine just now. Some large sub-tropical beds I saw in Reservoir Park today have grown most luxuriantly; they are tastefully planted and are remarkably effective. The deep ravine with wooded banks and gurgling streamlet make this park the most charming in the city, and Mr. Reeves, the superintendent, is increasing its beauty every year.

The lily pond at the Central Prison grounds is a sight to behold and not forget just now; the size of the blooms is something immense, I am afraid to give dimensions. Victoria Randi is growing well and will flower if the weather keeps warm two or three weeks longer.

The tuberous begonia beds at Exhibition park are looking very well now, and are flowering freely. A bed of these is very pretty and effective when all the plants do well, but I doubt if they will ever be quite a success as a bedding plant in this climate.

The Gardeners' and Florists' Association held its regular monthly meeting Tuesday, August 21; it was not very well attended. "Public Institutions" occupied most of the time, and it is safe to say that if the views of one or two of the members were followed out to their logical conclusion the association would soon be reduced to its original fragments. Broader and more fraternal views will, however, no doubt prevail, and such a calamity need not be looked for.

Mr. H. Slight is still at his old stand on Yonge street. How the business was arranged has not transpired as yet.

As we cannot go to Atlantic City we are having as much fun as we can at home; another cricket match was played between the east and west end gardeners and florists at the Exhibition grounds, and those of the boys who went up there spent a most enjoyable afternoon.

Trade is very, very quiet and what flowers are coming in cannot be called first-class; there will not be much doing until the frost comes. E.

Cincinnati.

The regular monthly meeting of the Cincinnati Florists' Society was not held this month, owing to the extremely warm weather and the absence of one or two of the officers, who are still out of the city.

The long looked for and much needed rain has come at last and has gladdened the hearts of the florists. A great deal of outdoor stuff has suffered for the want of water. We hope now the rain famine is a thing of the past.

There has been no change in business. It is still dull, very dull, and were it not for funeral work there would be nothing going on at all. Roses have been more plentiful this week than for some time past, and the demand very light. More roses have been cut right here at home than could possibly be disposed of, and still outsiders are consigning stock to the wholesalers, and consequently the returns are very small.

Mr. Chas. J. Getz has greatly improved his carnation houses by putting in a new water system, which will save a great deal of work, water and hose. His carnations are in excellent condition.

Mr. John Lambert of Norwood has just completed four new houses 10x60.

Mr. Max Rudolph of 12th street is remodeling his store. When it is completed it will be twice as large as his old one

and will be one of the finest in the north end of the city.

Nothing especially new to report regarding the cut flower business of our city. August 28 about 1 p. m. the writer happened in at one of our 4th street stores and casually asked if the passing of the tariff bill had caused any difference. The florist immediately spoke up and said, "You bet your life; I just took an order for an \$8 design." But taking the last three months into consideration the general report from our store men is that they have never passed through such a dull summer.

The florists attending the S. A. F. convention at Atlantic City all returned Sunday feeling good with the exception of Wm. Murphy, who was unwell on his return.

Richard Witterstatter is building a new greenhouse 80x17, short span to the south, for the purpose of growing seedling carnations. Richard already has some prize winners, and more coming. Most of our carnation growers have commenced lifting their carnations and getting ready for fall trade. The recent rains have helped our florists out materially.

Jas. R. Galdman and F. Howard Felter of Middletown, O., are building four new greenhouses. They expect to grow a general retail stock. One peculiar feature of this firm is that they are both mutes.

Mr. E. G. Hill of Richmond, called on us yesterday; his health is greatly improved, which his host of friends will be glad to know. G.

Worcester, Mass.

Antirrhinums, German stocks and pinks (all kinds) was the schedule for the weekly exhibition August 9, and in these classes very fair displays were made. The premiums were awarded as follows:

Antirrhinums—first, T. H. Record; second, F. A. Blake. German stocks—first, F. A. Blake; second J. A. Abbott. Pinks—first, S. H. Record; second, F. H. Merrifield. A. A. Hixon and H. A. Jones each showed a splendid table of sweet peas and F. A. Blake a vase of Liliun Harrisii that were very fine. Several good stands of cut flowers were exhibited, those shown by H. M. Chace, S. E. Fisher and S. H. Record being especially good.

A. Lawrence brought up a rather queer freak, a fungus, weighing 8¼ pounds, which he found in a swamp.

Trade runs along about the same; nothing very interesting to note. Weather cool and everything suffering from drouth, carnations suffering most severely; chrysanthemums looking well.

The aster show August 23 was a success; good asters in all classes except the pompon, and enough entries to make it interesting; also good exhibits of gladiolus (Lemoine's hybrids) and perennial phlox. Following are the premiums awarded:

Asters—Rose, first F. P. Alexander, second H. B. Watts; Comet, first J. A. Abbott, second Mrs. E. C. Brooks; Victoria, first F. P. Alexander, second C. E. Parker; Pompon, no first awarded, second T. H. Record; Truffaut, first Mrs. E. C. Brooks, second W. J. Wood; vase, one color, first H. F. A. Lange, second Mrs. Samuel Overend. Gladiolus, first H. B. Watts, second F. A. Blake; phlox, first Grace T. Johnson, second Mrs. Thomas Ward.

SEEDLING.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

News Notes.

Mr. E. V. Low, of Hugh Low & Co., London, will visit this country next month.

DUNKIRK, N. Y.—T. F. Van der Meulen is adding new glass for carnations and violets.

PROVIDENCE, R. I.—Edmond J. Johnston will continue the business of his father, the late Robert Johnston.

LOUISVILLE, KY.—C. Neuner, of Nanz & Neuner, left August 21 for California and Oregon, to be gone several months.

HOPKINTON, Mass.—W. & M. Cheney have purchased the florist business of L. L. Woolson and will remove it to Bare Hill.

NEW YORK.—The firm of Millang Bros., wholesale florists, has been dissolved by mutual consent, and the business will be continued by Mr. Frank Millang under his own name.

EASTON, PA.—Wm. F. Keller has removed to 227 Northampton street, where he has more commodious and finer quarters. He now has a handsome salesroom, large basement, and an additional room for storage of supplies.

PEORIA, ILL.—Jos. M. Cole, who has been in business here for the last eight years, has sold his entire business to Cole Bros., who moved into his store on August 1 and have combined his with their extensive stock. Trade here these hot days is as dull as it can get; if it was not for a little funeral work the florists could close their stores.

HUDSON, MICH.—The dry hot weather has cooked everything except where water has been very freely used. Most of the beds in town have suffered, but a few are looking very fine. The recent cold weather, which ended in a frost that killed corn and potatoes on low ground, made us think that fall was coming, but we have changed our minds now. C. H. Peck, our city florist, has purchased five acres of land just over the corporation line west of the city, and is now moving his entire greenhouses to his new location. He will add one new house of 1000 feet of glass, to his greenhouses, for carnations. The houses will all be heated by steam.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—As florist, by married man. State wages. Address J. LEE, 627 Oak St., Kalamazoo, Mich.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS, Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

THE U. S. Dept. of Agriculture will use fifteen million seed bags the coming year.

VISITED NEW YORK:—Lem Bowen, S. B. Dicks, Henry A. Salzer, E. Schaettel.

PRICES on leading foreign grown flower seeds are not yet fixed.

MOST stocks of imported vegetable seeds are likely to be in fairly good supply.

THE SWEET CORN crop is very uncertain.

TOMATO SEED is not likely to be over plenty.

ONION SEED, according to latest California advices, will be 25 to 30 per cent less than was expected.

SWEET PEA SEED of new crop is now coming forward from the Pacific coast growers.

EXTRA EARLY PEAS are proving of lighter yield than was first expected.

SWEET CORN will not be plenty.

S. F. LEONARD and W. A. Brotherton are making a trip through the east.

EARLY ORDERS for bulk seeds from Texas and other parts of the south are quite satisfactory.

THE INTRODUCTION of bag filling machines is likely to further reduce the present low trade prices on packet seeds in large lots.

MR. E. SCHAETTEL, representing Vilmorin-Andrieux & Co., of Paris, will visit the U. S. this month.

The Tariff Bill.

Paragraph of new tariff bill of interest to seedsmen and florists:

Par. 611. Seeds: Anise, canary, caraway, caradamon, coriander, cotton, croton, cummin, fennel, fenugreek, hemp, hoarhound, mustard, rape, Saint John's bread or bene, sugar beet, mangelwurzel, sorghum or sugar cane for seed, and all flower and grass seeds; bulbs and roots, not edible; all the foregoing not specially provided for in this act free.

Ottawa, Canada.

There is not much news to be had here of interest to the craft, all the blue bloods are either at the coast or in Europe, spending the money they ought to have paid their florist, while the latter have to scratch along the best way they can. This is an awful city for credit; almost every failure in business is caused by it. There are few good flowers to be had, and less sold. Rain two or three times a week spoils most outdoor stuff.

H. Parks has got his new house covered in and planted. A. French has added two houses 60x16 for roses. C. Scrim is putting up a house for retarding azaleas, etc.

Can any of the craft tell us how to kill mushroom spawn in the lawn? On our water works grounds there is a bank full of it, which causes no end of trouble. People go there early in the morning and dig holes to get the buttons, and leave the soil as if a dozen hogs had been rooting.

Box 68. ST. LOUIS, MO.

PANSIES..

Every Grower Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders.

An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance.

ALBERT M. HERR, L. B. 496, Lancaster, Pa.

Pansy Star Seed.

The JENNINGS STRAIN of high grade Pansy Seed. New crop now ready. Saved with special care from only the very finest varieties and (warranted) first-class in every respect.

THE JENNINGS XX STRAIN.

The cream of Pansies. Grand colors mixed, pkt., 1500 seed, \$1.00; 1 oz. \$5.00.

The Jennings Strain, finest mixed, pkt. \$1.00 about 2500 seed; 1 oz. \$4.00; 3 ozs \$15.00. No skum milk in this strain. (They are just as good as I can make 'em). To my old patrons I would say they are a big improvement over last season—more variety and finer colors. The best strain for florists either for winter bloom or spring sales; all large flowering.

Black Dr. Faust, finest, pkt., 2500 seed, \$1.00
 Finest Yellow, black eye, 1.00
 Pure White, top best, 1.00

When writing to any of the advertisers on this page please mention the American Florist.

St. Paul, Minn.

While the brethren were hurrying to Atlantic City or enjoying themselves in the surf, or attending the convention, we of the northwest were sweltering in the continued heat and drouth. A week ago we had promise of copious showers, but they failed to appear, and we plod on in hope of having rain sometime.

Trade continues in the same humdrum manner. There are always some orders, but the principal demand is for funeral work. Flowers are not abundant. Good roses especially are in good demand, but the supply is small. Sweet peas are nearly all gone. Asters are coming in, but are not in any particular demand.

Everyone about town seems to be through with summer planting and waiting for fall trade to begin. More roses than usual have been planted by the leading growers. H. Krinke has a fine house of roses, his first venture in that line. His place, though not large, is one of the best constructed and well kept in the city.

Coal dealers are already putting in bids for another season's supply. Hard coal will be somewhat cheaper than for several years, while soft will remain at about the same figure as last year. In this latitude coal is one of the largest items of expense to the florist, and any reduction in cost per ton means quite a large sum by the end of the season. In a few weeks at the longest night firing will be necessary and a few cold nights the past week almost demanded fire. Some of the craft think they can save expense by delaying the night firing, but the inevitable result, mildewed and stunted stock, has been a powerful lesson.

Roman hyacinths and paper white narcissus have already made their appearance and are planted for Christmas blooming. Bulbs of all kinds will not be planted very extensively this year. Some of the largest growers met with heavy losses last year. One in particular lost over six hundred dollars' worth. That, however, was caused by carelessness of employes. Sales last year of bulbous stock were very light. With the increased plant of roses and carnations this year it is doubtful if bulbous stock will be in any better demand than last. Roman hyacinths are almost indispensable for funeral work and are also in good demand for boxes for the country trade.

Carnations planted outside have improved very much the past two weeks. Where they have received plenty of water they will be as good as the average season. Quite a number of new varieties have been planted and we trust ere long to hear as much said in praise of our carnations as of our roses. We have no carnation specialists here, but we have good soil, good climate and a number of good common sense growers, who use their brains rather than their hands in producing healthy stocks and good blooms.

The annual outing of the Minnesota florists was held at Wildwood Beach the 16th. A goodly number from the Twin Cities was in attendance, and the day passed very pleasantly, with bathing, bowling, baseball, etc. FELIX.

PITGHER & MANDA. AZALEAS.

ALL extensive and successful growers of Azaleas for market know that plants summered over one season in this country have everything to recommend them over newly imported stock.

Our favorable climate ripens the wood more thoroughly, giving the plant an appearance which readily commands a higher price. The flowers are much more abundantly set and never lose their buds, which a percentage of the imported stock invariably do. They can also be delivered by freight early in September, when there is little or no danger of being hurt by frost in transit. We send out the best New York forcing varieties only, and all the plants have nice, shapely heads, profusely set with buds.

GENISTAS. Our stock of this most desirable decorative plant is the finest and most extensive in the country. The plants are all in healthy condition, pot grown, and have fine, shapely trimmed heads, which add much to their value.

WILLIAMS & SONS CO., Batavia, Ill.

Baltimore.

In the western part of the city is an entire block surrounded by a brick wall ten feet high, over the top of which one catches glimpses of glass roofs, fruit and shade trees, and the upper stories of a great mansion with an enormous shaft or chimney of brick towering far above it. It is the residence of the late Thos. Winans, a man of such originality that when he had a house built for himself his own ideas dominated everything. The most striking instance is the huge brick chimney about six feet square inside, which connects with every room by large pipes and makes a perfect ventilation in every corner of it. The place was originally surrounded by an ornamental iron fence, but the number of copies of Greek and Roman statues scattered about drew a protest from some of the neighbors which resulted in the wall. It would be hard to find a piece of ground of the same size better arranged. The stabling and sheds are along the east wall, and are so well screened by planting as to be almost invisible from the mansion, which is near the west wall. Along the north wall is a range of twelve ridge and furrow houses, each about fifteen by fifty feet. Each house stands on three brick arches running lengthwise of it and with openings between the arches, the ends being closed by the foundation wall of the house. In the center arch the hot water pipes are laid and in the walk over them are gratings to let the heat into the house; by closing these gratings the heat is sent under the benches through the side arches and all bottom or all top heat can be had with the greatest ease. Next to these comes a large lean-to palm house, empty now, but judging from the splendid specimens of seaforthia, cycas and latania grouped about, very full indeed in winter. The west wall is entirely taken up by lean-to graperies, the late ones showing luscious clusters of fruit. The apparent size of the ground is increased greatly by skillful planting, and as one saunters along, considering the numerous specimens of trees and shrubs, it is hard to believe that all is included in the limits of one city block. A charming little shady dell near the center with a lakelet fed by the overflow from a small fish pond is a most attractive feature. Mr. John H. Ryan, the gardener in charge, was full of apologies for the place, but, though not kept in the extreme neatness prevailing in Mr. Winans' lifetime, it is still a very beautiful garden, and in chrysanthemum time will be even more so, judging from the grand lot of pot plants now coming on.

Business in town is still extremely dull, sickness and death creating the chief demand for flowers, and for the time being the florist is in league with the doctor and the undertaker.

The club had quite an interesting meeting Monday night. Among the questions discussed were "Can we hold a flower show in connection with the county fair?" A committee of five was appointed to inquire into the matter, and though too late for 1894 to see if arrangements can be made for 1895.

"Are members pleased with the rule requiring exhibition plants to be single stem?" Quite a debate ensued, some claiming that single stem meant smaller plants and that would not please the public; others that the public taste should be cultivated into an appreciation of high culture. MACK.

Cleveland.

The pilgrims returning from the seashore all report having a pleasant and profitable time. There were not many representatives from our city, there being only six all told. But we promise to do better next year, as the convention meets in our neighbor city.—Pittsburg.

The carpet bedding in Monumental Square is looking as good as could be expected under the circumstances, except the vases which adorn (?) the walks, they are an eyesore, and the G. A. R. designs, instead of being red, white, and blue, are red, white, and green, as the lobelia which was used for the latter color is out of bloom, and is one mass of foliage. Is there no better plant to use to represent one of our national colors? I thought I had found the very thing last year in Washington Park, Chicago; the design was a flag and the blue "field" was that desirable color we have been looking for, but on closer examination it was found to consist of small broken stones which had been dyed.

Business is beginning slowly to pick up. There is considerable funeral work at times, and the orders for designs from outlying towns within a radius of 100 miles is considerable. White flowers being scarce at this time of year the average florist in small towns would rather send to a large city to have their work made up where there are greater facilities at all times of the year for turning out good work, than to stint his designs when flowers are scarce, and not give satisfaction to his customers. L. F. D.

Pittsfield, Mass.

A regular meeting of the Berkshire County Gardeners' and Florists' Club took place August 9 and was very largely attended. It proved to be a regular bug and insects meeting; the borers especially had a pretty hard time of it. Maples, mountain ash, larches and other trees are dying off here, the result of the attacks of these borers.

A hearty vote of thanks was accorded the Lenox Horticultural Society for their generous entertainment on July 21.

Those interested desiring copy of our annual report and premium list for the coming year may receive copy now on application. W. M. EDWARDS, Sec'y.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. OFFICE: 403 North Salina Street, SYRACUSE, N. Y.

COATESVILLE, PA.—James Brown Jr. has completed his range of glass, which consists of three houses 16x100 with packing shed 52x12.

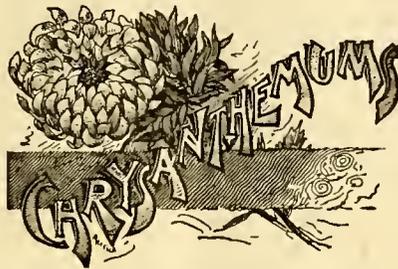

LANSING, MICH.—R. H. Mann, of the firm of R. Mann & Son, was married August 23, and has gone to Honolulu where he will reside.

WAUKEGAN, ILL.—F. R. Clarke has bought a place here, and will go into the business as grower for the Chicago market. He will add to his present glass area.

PADUCAH, KY.—C. L. Brunson & Co. report a fair trade for last year, and that prospects are encouraging for this winter's business. They have just completed a house 125 feet long for chrysanthemums.

TAYLORVILLE, ILL.—Fred Cook & Sons have purchased the Taylorville Greenhouses, owned by W. H. Kirkwood and M. B. Leach. Cook & Sons now have 4,000 feet of glass, and expect soon to add another house, and put new boilers in the original plant. The establishment includes eight acres of land, which will be used for fruit and greenhouse supplies.

Please mention the AMERICAN FLORIST every time you write to an advertiser.

Suggestions for a Chrysanthemum Show.

[Read before the Toronto Gardeners' and Florists' Association by A. H. Ewing.]

When I offered to write a paper on this subject I thought I was going to have a soft thing of it; but the further I got into the matter the more I saw that it was a bigger thing than it looked, and that it required a lot of thinking to get ideas straightened out into a comprehensible shape. I am afraid you may think this paper too long before I get through, but I assure you that I have endeavored to boil down the matter as much as possible.

First I wish the members to understand that I do not claim all the following suggestions as being original. They are principally taken from the writings of those who have had experience in running shows on the other side, which have been published from time to time in the horticultural papers, and from a discussion at the last meeting of the S. A. F. at St. Louis on horticultural exhibitions. I have picked out from them only what I thought would be beneficial for Toronto shows, blending them with what I have learned about the matter from my own experience.

To begin with, I think it is of the greatest importance that we should endeavor to make our shows more artistic, I mean in the arrangement of exhibits and in the decoration of the hall. As we have them now they are simply a lot of plants and cut flowers stood in rows like regiments of soldiers, and we only show the skill of the gardener in raising fine plants and big blooms. A small group 15x6 feet and a mantel are the only things in which the public is shown what can be done in the way of floricultural decorating. This seems to me to be all wrong, and I am sure the public will think so too if it is not remedied soon. Our association contains all kinds of gardeners and florists, and the annual show of the association should give the public an exhibition of what can be done when a lot of the finest plants and blooms are brought together. There is no doubt but that the association contains members with plenty of good taste in decorating for artistic effect, and there should be some way of bringing it to the front at our shows. I take it that these shows are not held only for the purpose of making money

for the association, nor for any of the individual members thereof, but also for the purpose of educating the public to a love for floriculture in all its branches, thereby advancing the profession and indirectly benefiting all engaged in it. Of course we want to make money enough every year to enable us to pay decent prizes and expenses, and if there is some over after that is done it gives us courage and the means to do more next year; but if something is not done to give more artistic effect to the whole show the public will soon say "Oh! it is the same old chestnut," and will get tired of it.

It is, in my opinion (and I have not taken this from anybody else), a most important thing to get a first-class superintendent in order to carry out the foregoing suggestion. I used to think that any active man with a voice like a fog horn and the schedule in his hand would do, but experience has taught me that these are not the only qualifications necessary. I think that the association should hang up an advertisement in the meeting room something like the following:

Wanted, for the chrysanthemum show of 1894, a competent man to act as superintendent. Must have experience and taste in decorating large halls; must be civil and obliging but must take no back chat from exhibitors; must be a hustler from the word go and able to do two days work before 12 o'clock noon on the first day of the show; must be able to lift palms in tubs weighing 500 pounds or more, and carry from two to four specimen plants at once without injury, or at least to tell the other fellows how to do it, and must be able to boss three or four helpers who think they know more than he does. \$2.00 per day will be paid to a suitable man. Apply to the chairman of the show committee, who will examine candidates as to their qualifications. Candidates must expect to be held up to general execration after the show is over.

The chrysanthemum show committee should, I think, be composed of not more than three, and these three should be carefully chosen by the executive committee. They should be the very best men of the "get there" breed that can be picked from the association, and must have time, or be able to make time, and be willing to make some little sacrifice in order to do the work. The executive committee is all very well to get up the prize list, and I think the recommendation in its report to-night is a move in the right direction; but to do the work of the show it seems to me that a large committee is too unwieldy and can't move quickly enough.

Judicious advertising is one of the most important points in the success of a show, and the member of the committee who has this branch in charge should have had some previous experience in

that line. I have an impression that our former shows have not been sufficiently advertised either in the papers or by posters or hand bills. A good many of the American clubs publish a souvenir and distribute a large number of them before the show, but this is a little expensive, and I think it is doubtful whether the returns are large enough to make that kind of advertising advisable.

Newspapers can do more for the success or failure of any undertaking in this country than any one thing, and their good will should be worked for by every possible means. Now newspapers are not run just for the fun of the thing; they are business undertakings, and the proprietors are in it to make money; every inch of their space represents so much value to them. Therefore, I do not think we should expect too much of them unless we are as liberal with them as they are willing to be with us. Most of our Toronto papers have in the past seemed to be quite willing to be liberal with us, and I quite believe that if we are more liberal with them than we have been, both with our advertising and complimentary tickets, they will do still better with us in the future. Depend upon it, we can't get along without the thorough good will of the press. The following is an extract from a speech made by Mr. E. A. Seidewitz of Baltimore, at the St. Louis convention.

I consider that liberal advertising is the main requisite of a successful flower show. Here, gentlemen, let me impress upon you one thing, and that is, never expect to get anything for nothing. It will not do to go to a newspaper and simply say: "We will give you news when you give us a description of our shows." We must take into consideration that space in a newspaper counts for so much money. We must not go to them and say: "You send your reporter down, we will give you plenty of news." That is wrong. In Baltimore we go to a newspaper proprietor—Mr. Abell of the *Sun*, for instance—and say to him: "We wish to invest so much money in advertising." Well and good. Our offer is accepted, and the space to which we are entitled by the amount paid is given to us. We go to all the papers alike—it does not matter how small the paper, we believe we must go to all of them. When the show opens they send around their reporters; and I have seen those reporters work there the whole day, with the assistance of the committeemen, in preparing correct and creditable descriptions of the show. I may say that to the newspapers of Baltimore we owe our success financially; and I would like to impress upon you, gentlemen, that the newspaper in this country is indispensable in making the flower shows of America successful.

Advertising by posters is another method that can not be neglected without loss; there should be a large, conspicuous and attractive bill on every boarding in the city. If it pays the theaters to do so much of it it will pay us. Shop cards also do good and their cost is comparatively small. Bills on the street cars during the show I think do a lot of good also and pay well. Giving invitations to prominent people (as was done last year) and complimentary tickets, if done with discretion, may be almost called a method of advertising, and does more good than those who do not see how things work may think. It puts the recipients of them in a good mind and predisposes them to favor the show, making them advertising mediums at once.

There is another point on which I have changed my mind lately. I used not to believe in formal openings. Of course on these occasions there is a lot of humbug said and done, but if the lieutenant governor or the mayor does the business the papers are bound to give an account of it next day, and the show gets a lot of advertising; besides, perhaps, it gives a fashionable tone to the show which it otherwise would not get. Can we afford to lose this?

As regards the price of admission, I don't see that it can be changed for the better. 25 cents catches every one, and I think we should let well alone on that point. The Chicago club at their 1892 show tried 50 cents, and got as many people as the year before at 25 cents. That was very nice for the Chicago club, but I am sure that if we tried the same thing here we should get left. But our gate receipts certainly ought to be a great deal larger than they are. In Indianapolis, with a population of 130,000, the gross receipts for the show in '92 were \$3,400, with the admission 25 cents in the day time and 50 cents at night. Toronto, with a population of over 200,000, could only scratch up to about \$900 at last year's show, which was the best that has been held. So that it is evident that we have a big thing to work on yet, and I believe that with proper management our show might be made the great fashionable event of the season, and if this can be done there is money in it not only for the association but for all in the profession.

The subject is one of vital importance to the association; we might as well be dead as half dead; but when it is in our power to make this show a big thing and thereby benefit ourselves one and all, why let us get up and make it the liveliest kind of a show on record. I hope the members will discuss these few suggestions, especially the possibility of making the show more artistic as a whole.

Since writing the above there has been a good deal said about judges. Well! we as everybody knows favor the one judge plan, and have found it work very well and with less expense, less trouble, less kicking. The main points are to get thoroughly good and expert judges of plants and cut flowers outside our own city, and change every year.

Judging New Chrysanthemums.

ED. AM. FLORIST:—Your esteemed correspondent Mr. T. D. Hatfield brings up a very important matter relative to judging chrysanthemums. It is in line with my own thought upon the subject, and hence would like to see efforts made to have a representative exhibit of all the seedling chrysanthemums made at some intermediate city where the owners of seedlings might send them for judgment. The plan outlined at Atlantic City by the National Chrysanthemum Society does not meet the requirements of the case; it proposes to appoint three experts in or at the different centers to pass upon those in the neighborhood or adjacent to the city or center where the committee hold forth. A far better plan would be to have a city situated like Buffalo or Pittsburgh where all the seedlings could be got together, at one or more stated times, and there have them judged comparatively and on their merits. Something of this kind is so obviously necessary that it commends itself at once to the intelligence of those interested.

Three or five judges might be selected, and let these judges work on the point system, the highest number of points noted to constitute an award of the first class, a given number of votes to constitute an award of merit of the second class.

Complaint is made that examinations and decisions are made now on too limited a line, in other words, that only varieties with stiff stems and monstrous flowers are considered. This could easily be remedied by making classes and defining the attributes of varieties for entry in the different classes.

It does not necessarily follow that this competitive test shall be held in connection with an exhibition or that a public show shall be had, but it would be obviously to the advantage of any club to have in connection with their own exhibit the exhibit of seedlings under the supervision of the National Chrysanthemum Society. They certainly would prove an interesting feature of any exhibition and be a winning card in the way of a good adv. for the local show.

Complaint is made on every hand of the enormous number of new varieties launched upon the market every year, varieties inferior to existing sorts, and which should never be sent out. The growers give as a pretext unpropitious dates of shows, judges all one sided in passing on varieties, examining everything presented from a narrow commercial view. Judges must be selected who hold the confidence and esteem of grower and buyer alike; caution will have to be exercised here, but there need be no trouble in getting judges who shall be eminently satisfactory to all concerned. If we as growers and raisers of new varieties ever expect to command confidence and enjoy the full fruition of our labors we must earnestly support a plan approximating at least the plan outlined by Mr. Hatfield. European growers write that they would like to buy in quantity of our new varieties, but they are at a loss to know which are the best out of the one hundred or more varieties annually offered with such glowing descriptions.

A good thorough test of this plan would not be so very expensive or difficult to arrange, and the writer firmly believes great good would come out of it. If nothing else come out of it it might enable our genial and versatile friend Rawson to point out to the satisfaction of the judges the difference(?) between Princess of Chrysanthemums and Good Gracious.

Undoubtedly there will be more new chrysanthemums this year claiming untold merit than were ever presented before, and why not arrange now to examine the claimants and as the horsemen say—"See if she can trot." This plan should be especially gratifying and welcome to the owners of new varieties of merit, for an award under the circumstances would mean an endorsement of a new variety that would have great pecuniary considerations accompanying it.

E. G. HILL.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

If you have any plants in the field yet get them in as quickly as possible, unless they are quite small plants, when it may be policy to leave them in the field until there is danger of a hard frost. A good hard frost is no serious injury to carnation plants that are intended for propagation and that will be grown in a tem-

THE GROUP PHOTOGRAPH TAKEN AT CARISBROOKE INN, ATLANTIC CITY.

perature of 40° to 45°; but it is quite an injury to plants that are to be grown in a temperature of 50° to 60° for cut flowers.

After the plants are started nicely, if the shading has not been washed off by rains, rather than let the plants suffer for want of sunshine wash it off yourself. About the quickest and cheapest way I have found is to take an ordinary scrubbing brush with a handle and a boy at the end of the handle. If it happens to be very hot for a week or two yet as it often is in September it is best not to take all the shading off at once, but clean every other row, that is leaving one row with shading on and one clean. As soon as you safely can clean the entire house, for the two best friends the carnation has are sunshine and air.

As a rule while you are starting the carnations you are also starting a fine crop of weeds. If you do not stake as you plant do it as soon after as you can and you can then easily keep them clean, which is a very essential feature in carnation culture. Everything possible should be done to assist root development, and there is quite a perceptible difference between beds that have the soil kept stirred occasionally and those that have not, the difference being decidedly in favor of stirring the soil. These may seem like unimportant little items, but it is just a number of such little things carefully looked after that make successful carnation growing. In stirring the soil do not cut into it deep enough to disturb the roots, and do not let some careless fellow get among your plants who will break them up and do more harm than good.

It is a good plan to watch your employes, and if you find you have a careless one on the place better get rid of him at once; such men may have a place to fill on this earth but it is not in a greenhouse full of carnations. I think I have said before that starting right is the key to future success, and to start right and keep right you must have employes who will carry out your instructions intelligently and carefully.

Keep a sharp look out for green fly and

do not let them get a start on you; a good plan is to close your houses about 6 o'clock p. m. and give them a good smoking once a week. Leave the smoke until about 8 p. m. and then open up again for the night.

ALBERT M. HERR.

Carnations in the Field on Long Island.

FLATBUSH.

With the peculiar retentive clay soil of Flatbush a dry season is more conducive to good results with field grown carnations than is a wet one. Hence it is that although this has been undoubtedly the driest summer for forty years and the roads are knee deep in dry dust and the greenhouses effectually shaded with the same material, carnations as a rule are in excellent condition and sympathize not with the flocks of cackling geese and unhappy looking ducks which troop hither and thither all over the town searching disconsolately for a puddle in which to immerse their dust coated backs.

Lizzie McGowan seems to be the only prominent variety which will not take to characteristic Flatbush soil. In only one place (Suydam's) has it done anything this season. Here the plants are as fine as ever were seen anywhere. With all the other growers it has been a pronounced failure. This is accounted for by the quality of the soil on the Suydam place, which is a rich friable loam and destitute of the clay which abounds all around it. This is the only establishment where any planting has been done in the houses yet, other growers waiting anxiously for rain to loosen the hard packed soil so that the plants can be lifted without tearing the roots. Suydam is an example of good luck and industry combined, a combination hard to beat. They say that he gets up in the morning to see what time the sun rises and growls because night comes so soon.

None of the carnation growers are entirely free from rust, which seems to exist to a trifling extent on all varieties. Two sorts, however, are loaded with it, Silver Spray and Jacqueminot. This is much to be regretted in the case of the

latter variety, which has otherwise made a splendid growth. Albertini has done well everywhere, and Puritan is fully equal to last year. Baron de Rothschild (Bouton d'Or) looks good with its reintroducers, Dailedouze Bros., but at Messeburg's has made no growth at all. William Scott is fully up to expectations with everyone. Tidal Wave, The Stuart, Portia, Ferdinand Mangold and Annie Pixley have all done splendidly. Uncle John has made a big growth but shows traces of bacterial disease in some localities. Daybreak and Hinze's White are somewhat stunted in some lots, but in general are all right. Grace Wilder is simply immense with Bennett and Messeburg, who plainly have good cause to still stand by this old favorite.

QUEENS.

At C. W. Ward's Cottage Garden establishment there are five or six acres of carnations and the houses are being filled this week. Michigan, Wm. Scott, Albertini, E. A. Wood, Ferd. Mangold, Thos. Cartledge, Portia and Uncle John have all stood the drouth to perfection and are in excellent condition with little if any difference in size from last year, with the exception of Uncle John, which grew poorly last year but which is first-class in every respect this season.

There has been trouble with red spider on some varieties, Daybreak suffering severely from this pest. Helen Keller up to two weeks ago, Mr. Ward states, looked first rate but just now it seems to be going backward. It is also badly affected with red spider. The Stuart is undersize as compared with last year but as a rule is in pretty good shape. Sweetbrier has done just about the same as The Stuart.

Storm King has suffered quite severely from the dry weather, making only a small straggly growth, but being a late grower is expected to catch up somewhat in the houses. Buttercup stood only fairly well, also Edna Craig and Dr. Smart, and these varieties are all undersized. As to McGowan it has done splendidly and better plants would be

hard to find. Ada Byron has done pretty well, considerably better than Sweetbrier. The three novelties, Bridesmaid, Meteor and La France, have all made splendid growth. Mr. Ward has five new houses in process of erection, all with short side to the south.

At Chas. H. Allen's the carnations are all housed. Uncle John made the best growth of all the varieties outside. Albertini, The Stuart and Wm. Scott all show the effects of the drouth badly, being as a rule scarcely more than one third size. Scott is nothing to what it ought to be and has been in former seasons. McGowan while small is of excellent color and appears much more healthy and vigorous than it did last year. Mr. Allen is growing for pot plants a lot of Winter Cheer, an English variety, scarlet, which is in habit and constitution the ideal plant for this purpose.

Mme. Caroline Testout for Outdoor Planting.

It will be good news to not a few ardent admirers of the Testout rose to learn that it is not only a profitable hothouse rose, but may be grown in the open air with success. From experiments which I have made with it I think it may be claimed to be perfectly hardy, and if such claim prove well founded a very valuable feature will be added to its already numerous strong points. This claim of hardiness it will be understood is for this locality only; but as our winters are severe enough to please an Esquiman it is to be presumed that it will prove hardy anywhere in this latitude. I will give in detail my experience with it as an outdoor bloomer.

Last year, being desirous of replanting my Testout bed with young stock, I was in somewhat of a quandary as to what to do with my old plants. The rose being a new variety and plants bringing a good figure, I disliked to discard them. Finally I hit upon the idea of planting them out of doors. The venture did not promise much in the way of success, but as I had the plants and ground space decided to try it any way, let the issue be what it might.

Being at the height of an exceedingly dry summer the ground was of course in the very worst natural condition for planting. There had been no rainfall for over five weeks. These things considered we had to use unusual caution in transplanting. A trench five inches deep was dug, to which the plants were taken singly, having been cut from the bed in squares and carried on spades to insure as much earth around them as possible. Being placed in the trench, water from the garden hose was turned on them and kept running during the entire process of transplanting, which occupied some little time. The plants and trench were thus completely saturated. When the plants were all in place the trench was filled with dry soil. This process was followed by mulching the entire bed with light strawy manure. Another heavy watering was

given, which ended the experiment for the time.

Early in March the plants were pruned to within six inches of the ground. They broke strong early in the month, and made a growth of some three or four inches, when a sudden freeze came and killed them down to the ground. In April they began to push stronger than before, and we were cutting very nice roses by May 25. They were in the very height of beauty from the 5th to the 20th of June. Some days we cut as many as 200 roses, most of which were of perfect form and exquisite in color. There were about five hundred plants in this bed, and of this large number not a single one was winter-killed.

I am satisfied that we can get as good roses outside as under glass provided the same attention were given. The bloom we got was quite as good and profuse as when the same plants were grown in the house, with the single exception that the stems were shorter. But this can be remedied I feel sure, provided the plants are watered and syringed as faithfully every day as when under glass culture. Visitors at my place constantly inquire whether the plants are watered from the hydrant directly, and express wonder that water so cold does not hurt them. The temperature of our city water as it comes from the mains is about 56° in the summer and the plants thrive under it famously.

I think I am safe in saying that this bed of Testouts is the best and cheapest advertisement I ever had for a home retail trade. Hundreds of people came to see it, many of whom left orders for from one to a dozen plants. I unreservedly advise my florist friends not to throw away any Testout plants, especially if they have a retail trade they care to retain and develop. Even though they do not get the desired long stem the roses will prove invaluable in making up designs.

We treated a few of the K. A. Victorias in the same manner with a like result. These two roses make a great team for outdoor planting and will, I think, in the near future be widely cultivated. We also experimented with the Wootton, securing as satisfactory an outcome. If I were to be confined to three roses for outdoor planting I would select Testout, Victoria and Wootton. W. W. COLBS.

Miscellaneous Seasonable Hints.

The old pelargoniums that were cut down a month ago will now have made young breaks of half an inch or so. Shake every particle of earth from the roots and repot firmly in a smaller sized pot than they were previously growing in. A good slice can be taken off the ends of the roots. They will soon make young feeding roots, and these plants could, if you had the room, be made into grand specimens 5 or 6 feet across. Perhaps you don't want to grow such large plants, but they will give you hundreds of cuttings in a month or two, which will make useful market plants by next May or June. The three pelargoniums I found to sell the best last season were Mr. R. Sandiford, white; Dr. Masters, crimson, and Mme. Thibaut, a beautiful soft pink.

Never neglect to string up your smilax; much time and money is wasted by neglecting this operation at the right time, and don't use white string; whether it be common black thread, shoemaker's thread or silkline it matters little so long as it is dark in color and hasn't to be removed when using the smilax. Pulling out the conspicuous white string is not only a

tedious job, and occurs most times when you are in a hurry, but it breaks up the smilax and destroys much of the gracefulness when used for decorations.

Don't forget when you have your carnation beds planted to plant along the edge a few plants of the double sweet alyssum and myosotis. The former little plant is most useful and will help you out many times when the demand for white flowers is brisk. I don't know the specific name of the myosotis that is grown in this locality, but it is a most useful plant, commencing to flower at Christmas and flowering profusely until June. I never could see that these plants, say 2 feet apart along a carnation bench, did the slightest harm to the carnations. They are therefore clear profit.

If I had written any notes a week or two weeks ago I should have recommended you to put in several batches of cuttings. It is not late yet. Every healthy geranium cutting you can get hold of should be taken off at once. Potting them firmly in 2 or 2½-inch pots is just as good as the cutting bed, and they make sturdier plants. If you cut the plants down for the cuttings early in September and we don't get a killing frost early in October you will get another fine batch of cuttings, or the old plants will be in excellent order for lifting.

If you don't have any large coleus in pots for stock, then put in a good batch of the leading varieties; they will make strong young plants before cold weather comes. The middle of the month is a good time to put in the cuttings of many common but useful plants, among them the ivy geraniums, vincas and Abutilon vexillarium. There are a few plants that you can multiply one hundred fold during the winter and spring, and therefore but a few dozen cuttings will be sufficient. I allude to such weeds as lophospermum, senecio (German ivy), Pilogyne suavis, etc. There are other plants of which it is more profitable to lift a few old plants and begin to propagate when you have more room. These are Salvia splendens, pyrethrum, the common white feverfew, lobelias, ageratums, achryranthes and others, and there are a few plants of which you should have a few in pots all summer because they lift badly; heliotrope and lantana are among these.

As this has been since early June one of the driest summers in my recollection, and where no irrigation has been resorted to when we do get the welcome rain, all our soft wooded plants will take a jump and be naturally soft and particularly liable to injury by a slight frost if we should get one at the end of the month. Don't leave all your tender plants out to be rushed in at the last moment. You will have callas, poinsettias, azaleas, stevias and other things plunged in frames. The poinsettias and callas will do better under glass now. The azaleas and stevias can be left out till the end of the month.

Don't forget to water once a week at least the boxes of Romans and other bulbs which you have outside covered with a few inches of soil. They must be kept moist or no good root growth will go on, and the Harrisii lilies that are potted and mulched outside must not be allowed to get very dry. At this moment the rain is falling in good style, and never did it seem to "fall from heaven upon the earth beneath" with such blessings as it does this morning. WM. SCOTT.

YOU CAN'T AFFORD to do business without a copy of our trade directory and reference book.

THE GROUP PHOTOGRAPH TAKEN ON THE PIER AT ATLANTIC CITY AFTER THE SHOOTING MATCH.

Fall Exhibition Mass. Hort. Society.

The Massachusetts Horticultural Society opened its annual exhibition of plants and flowers on Wednesday, Sept. 5.

In the upper hall were the grand groups of stove plants and ferns which have always been a leading feature of this exhibition. While not as extensive as on some former occasions these displays were exceedingly good. The fancy caladiums from N. T. Kidder have never been excelled here; the ferns from the same exhibitor were superb, and his whole collection of specimen foliage plants was without a flaw. In Dr. C. G. Weld's group the crotons and dracaenas were especially noticeable for their perfection of form and brilliancy of coloring.

John L. Gardner's group of stove plants was also most creditable. In Mr. Gardner's exhibit of orchids were some well bloomed plants of *Miltonia vexillaria*, and among those shown by Benj. Grey was a very fine form of *Dendrobium formosum*.

Tuberous begonias, both plants and cut flowers, were shown in more than usual profusion, and some very good plants were staged by Dr. Weld, the Bussey Institution and E. S. Converse; a fine lot of blooms sent by the Oasis Nursery Company unfortunately arrived in a somewhat battered condition.

David Allan showed a nice little group of jardiniere plants, and the Harvard Botanic Garden sent a very interesting collection of sarracenias, among them being several lovely hybrids.

The display of cannas was by far the best ever seen here. R. & J. Farquhar, Robert Christie, David Fisher, J. Cowles and others showed extensive collections, embracing all the leading sorts, but the whole list of cannas must stand at a respectful distance in the presence of Mr. Cowles' seedling, Mr. Fairman Rogers; a

plant in pot and several vases of this peerless variety were shown.

The aquatics, of which there were five tanks, were a leading attraction of the exhibition and were constantly surrounded by an admiring throng. They came from Daniel D. Lee, John Simpkins, L. W. Goodell and P. Bissett, the latter sending all the way from Washington enormous blooms of a deep rose colored nymphæa, a cross between *dentata* and *Sturtevanti*. One of the most beautiful nymphæas shown was the new *Columbiana*, which was in the collections of John Simpkins and L. W. Goodell. It is a glorious color.

In the lower hall the show of cut flowers was superlatively good, something unexpected in view of the long spell of dry weather.

The dahlias were very far in advance of any former display. Such perfection in form, size and color has never been seen here, and it came in the form of a big surprise. H. F. Burt's collection of named varieties was very extensive, and they were superb in every way, as were also those from L. W. Snow, W. C. Winter, W. W. Rawson and John Parker.

Asters, although somewhat past their best season, were excellent. Nasturtiums, marigolds, pinks, zinnias and other garden flowers were shown in profusion. A great advance was noted in color and form of zinnia flowers, the tiny lilliput varieties being especially admired.

Wild flowers from Mrs. P. D. Richards, the Misses Doran, G. H. Grinnell and L. H. Parker; and hardy perennials from Rea Brothers were as usual a great attraction, and enthusiasts with note books in hand jostled each other here continually.

Mr. J. W. Clarke showed a large collection of hothouse grapes, among which were some well finished Alicante and Golden Hamburg.

An interesting and interested visitor

was the always welcome Louis Menand, from Albany, accompanied by his daughter. Other visitors were Alexander McClellan, J. Cowles and Robert Christie, from Newport, and George McWilliam, from Whitinsville.

An interesting little diversion occurred when Elijah Wood made his appearance in the hall. He was captured and hustled into the library room, where he found a party of his society friends, headed by Mrs. E. M. Gill, who were there to present him with a nice little collection of silver table ware. The presentation remarks by Mr. Jos. H. Woodford were in the right strain, and little Woodie's reply was equally good. His only regret was that his newly acquired better half was not also there to share his pleasure.

The list of premiums awarded at the exhibition will appear in next week's issue.

Lenox, Mass., Horticultural Society.

The Lenox Horticultural Society has every reason to be proud of its first exhibition. A more favorable or attractive spot for such an event than the acacia and maple shaded lawn on which the big tent was spread it would be hard to find, and certainly no finer compliment could be paid to the aggregation of expert growers which makes Lenox horticulturally famous than the stream of aristocratic visitors whose stylish equipages drew up in quick succession to the entrance. The elite of the land were there, and they were enthusiastically appreciative.

The arrangement of the groups of plants upon the grass was admirable. The main tent, one hundred feet long and fifty wide, was filled to the last available foot of space, and an annex tent had to be devoted to the display of fruit and vegetables.

A. H. Wingett and P. J. Donahue were the winners of the two first premiums for group of stove and greenhouse plants. The first prize, which was awarded to Mr. Wingett, was a silver cup offered by Thos. W. Weathered's Sons. Noticeable in this collection were the anthuriums and specimen ferns. Mr. Donahue's Pandanus Veitchii, ficuses and palms were very fine. The prizes for twelve stove plants went to A. P. Meredith, first, and J. F. Huss, second. Mr. Meredith's seedling anthuriums, crotons and Adiantum Farleyense were excellent, and his group of ferns, which took first prize in their class, would be hard to beat, all of them measuring from four to six feet across. He was also awarded first for specimen fern, six nepenthes and twenty-five plants of seedling gloxinias, Mr. Huss following second in the latter class. Mr. Huss was first with table decoration of plants, twenty-five tuberous begonias, collection of asters, lilies, cannas, gladioluses, pansies, annuals and herbaceous perennials, a fair amount of glory for one occasion.

Mr. Wingett staged the only group in the class of flowering and ornamental plants, and it well merited the first premium which was awarded to it. Double zinnias were shown by A. Hans, J. F. Huss and C. H. Russell, those belonging to Mr. Hans being remarkably fine. Other exhibitors who received honors were E. J. Norman, Martin Finaghty and W. M. Edwards.

There were some very interesting and creditable exhibits of native plants, those shown by Miss Dana's school children and Master Thos. Campbell, a gardener's son twelve years of age, being especially good. J. F. Huss' group of garden annuals was superb, the salpiglossis particularly attracting attention. From Wm. M. Edwards and Martin Finaghty came interesting collections of ornamental trees and shrubs, Mr. Finaghty also showing a good group of small conifers in pots.

W. A. Manda showed a novelty in ferns, Adiantum capillus veneris imbricata, which in form and color closely resembles Farleyense. A certificate of merit was awarded to it. A choice group of novelties and rare plants came from Pitcher & Manda, and certificates of merit were awarded to Stenandrium Lindenii, a pretty acquisition for jardinières, and Cattleya chrysozona in this exhibit. Certificates were also awarded to A. H. Wingett and A. P. Meredith for seedling anthuriums, and to J. F. Huss for anatomical leaves.

Of the fruit and vegetable display it is only necessary to say that it was superlatively good for such a hard season as has been experienced, and the premiums were well distributed between the same growers who exhibited the plants.

The Lenox Horticultural Society, although but eight months old, numbers eighty members already and evidently has a bright and useful future before it.

Arrangement of Flowers.

XI.

ROSE BASKETS.

The accompanying illustrations show two baskets of roses, made up loosely with long stemmed flowers. Both are handle baskets. The first is made up of Madame Testout, in the style much in demand at the present day. As often stated before there is a decided objection to wired roses, and many people will not have such under any circumstances. None of the roses in this or the second illustration have a single supporting wire. The materials for such a basket must be

ROSE BASKET NO 1
ARRANGEMENT OF FLOWERS.

strictly fresh and of good quality, else the flowers will droop quickly, and result in dissatisfaction. Extra care should be taken to imbue the stems well in the sphagnum. The roses being long stemmed are best wired onto match sticks, as toothpicks are too short and weak to hold up the flowers. Avoid overcrowding and use plenty of adiantum in the arrangement. The spray over the handle is formed of the same material, and may be varied to suit different tastes.

Illustration No. 2 is composed of equal quantities of Duchess of Albany and Kaiserin Augusta Victoria. The shape of the basket is somewhat different, but the arrangement is practically the same as No. 1.

Chicago.

As the season advances the chrysanthemum question is forging to the front, and from now until November, all the boys interested (and who is not?) will put in their best work to come out on the top of the heap. That the mum has come to stay is now admitted by the most sceptical; growers who ridiculed the so-called chrysanthemum fad unmercifully a few years ago have experienced a change of heart and are now into mums by the ten thousands. The suburbs, Western Springs, Hinsdale, Downer's Grove and Mount Greenwood, located southwest of the city, have always been to the front in this line. A visit to the three first named towns disclosed the fact that the boys in this section are right in it again.

At the station at Hinsdale we were met by our genial friend O. P. Bassett who acting the host and cicerone in his own inimitable way, first whirled us behind a spanking team over to the establishment of J. C. Vaughan at Western Springs. Foreman Wilson received us cordially and

tried to initiate us into the mystery of mum growing. If we didn't profit by the same, the fault is our own. We may acknowledge right here that our experience in growing mums is nil and for that same reason perhaps are led to think that we know a good plant when we see it. Take this for what it is worth; in our humble opinion the stock we found here looks exceedingly fine; the standards and other specimens promise to beat any former attempt at show plants. A fine lot of single stemmed fellows are grown in 6-inch pots. There are besides these three houses grown to single stem for cut flowers. Each one of the seven benches is treated in a different manner as an experiment; for instance one bench was planted in soil and manure mixed together, another with two inches of manure at the bottom and soil on top, a third with pure bone meal mixed in, etc. There is little difference apparent so far, all looking equally vigorous. In seedlings we find two benches containing several thousand plants, from which something good can be expected. These seedlings are the pick of last year, grown as yet under numbers.

We now drove back to Hinsdale; after first partaking of the gracious hospitality of Mrs. Bassett, we next inspected the mammoth establishment of our host. Of the excellent condition of the rose houses, as well as some valuable data of results, kindly furnished us by Mr. B. we shall speak more at length later on. In mums we find about 12,000 grown to single stem, as fine a lot of plants as were ever seen. The list includes all the best commercial sorts. One house of Domination attracted our particular attention; the plants are of such even height it looked as though they were clipped by a pair of shears. The show plants also look very fine and reflect great credit upon the able

ROSE BASKET NO. 2.
ARRANGEMENT OF FLOWERS.

foreman Mr. Benson. The single stem exhibition plants are grown in 7-inch pots.

Our next call was at Geo. Miller's. George was hard at work as usual. The place is now nearly in shape again, all but the boiler sheds, which are being built now. Mums will play an important part at this establishment next fall. Twenty-five thousand plants are grown, mostly to single stem. The whole stock looks thrifty; the banner house we venture to predict will be the one of Eugene Dailledouze which looks grand at present.

We next took a spin over to Downer's Grove, to the establishment of our old veteran D. B. Fuller. Jolly Tommy Hopkins is of course in charge. This isn't the first year that Tommy has demonstrated his knowledge of growing mums. As usual the stock looks fine. There are 1700 plants on benches, these are grown to 3 and 4 blooms each. We noticed some very fine Vivian-Morel in particular.

A few blocks away is the establishment of Mrs. Foot. Here too the mum is much in evidence; some 5000 plants are benched grown mostly to single stem, all looking well.

There is little change in market conditions. Demand is still very limited, and as the supply, particularly in roses, is increasing fast, prices are very unsettled. Only fancy stock commands the top figure of \$3, the bulk goes for much less. Good Beauties, and there is some very fine stock now for this season of the year, bring from \$1 to \$1.50 per dozen. J. B. Deamud & Co. handle some extra fine valley, the best ever seen on our market at this season of the year. This is grown by Bassett & Washburn.

Mr. John Holmes, one of our oldest

members in the trade, died last week. The deceased was well known as a member of the old firm of Brooker & Holmes, doing business for many years at 5818 State street.

Philadelphia.

The boys are still talking about the convention when they happen to meet at the stores or in the club; the special features as they appeared to different minds are gone over and commented on, and discussions take place that should have been heard in the convention hall. The bowlers are turning over the details of the match, and that "Buffalo angle" is receiving considerable attention. As compared with a "Philadelphia straight," the "straight" was not in it, but it still has its friends and may take a corner off the angle at some future time. The shooters as a matter of course are jubilant, and the bowlers have to take considerable chaff at their hands.

The state of things is quiet, very quiet; it is to be hoped that this is the final calm and very soon the storm of business will break loose in all its fury, and the more furious it becomes the better we will like it. To the average florist it would be a real pleasure at this time to be so tired out after a day's business that he could hardly get home.

The outlook is promising, however. Mr. Eisele, of H. A. Dreer's, says that the past July and August business has broken the record with them and they have been compelled to buy stock to fill orders. Kentias have sold particularly well, taking preference to arecas. At their city store they have had their show windows filled with a fine display of tomatoes nicely arranged in baskets and a large

collection of canna flowers correctly named; these latter made a gorgeous show.

Asters have been fine this season and all the stores have a few dozen pots just outside the door to make a little show and attract trade; they seem, however, to be more proficient in catching dust than customers. Cut asters are very plentiful and sell as a rule for 75 cents per hundred, the pots bringing \$6 to \$7 for the same quantity. Roses are now coming in in fine shape. Beauties are a good size and color, but the stems are not any too long. Kaiserin is in good shape, as is also La France. The other teas from roses for the wintercrops are commencing to come and show up well, there being little or no mildew apparent. The colors of the various assortments present a darker tone than formerly, as the Meteor is to be now found in nearly every grower's collection. The prices range from \$2 to \$4 for all but Beauties, for which \$8 is asked. There has been quite a lot of funeral work lately, but it was mainly a harvest for the crape pulling fraternity, as they managed to intercept the committees and got the cream of the business.

The meeting of the Florists' Club last Tuesday evening was a very interesting one, reports of the various committees were listened to with great attention, and they were highly commended for their work in making the various events so successful. A resolution was passed thanking the *Public Ledger* for their very complete reports of the convention and particularly praising the work of Mrs. Starr, the lady who had charge and who worked so faithfully to get a correct account of the proceedings.

A vote of thanks was also given to Mr. Edwards of Atlantic City for his services and the loan of plants to decorate the convention hall, and to Mrs. Theodore Edwards of Bridgeton for her enjoyable singing, both at Carisbrooke and at the entertainment on the pier.

Edwin Lonsdale exhibited three plants of *Cypripedium Charlesworthii*, each with one flower. It has more color than any other variety we have seen and will be a valued addition to most collections. Mr. Z. De Forest Ely also placed a vase of dahlias on the desk, among which were some pretty varieties. The question selected for discussion at the next meeting was "How to manage 20,000 feet of glass." Mr. John Welsh Young was assigned the subject, and will no doubt give the club a very interesting paper. Mr. Craig said that of all the money spent in Atlantic City he thought the little that it cost to color Mr. Harris' nose was by far the best investment the club had made. It had brought Mr. Harris out in a new role and raised the standard of the club in the estimation of the visitors, as it gave them an idea of the talent we had. He said that Mr. Eddy said he had made a study of this play and that he had never seen Mr. Harris' part played to such perfection before.

The photos of the groups at Carisbrooke Inn and on the pier were shown and were pronounced excellent; they should be valuable souvenirs of the convention.

Z. De Forest Ely has opened a wholesale commission branch in connection with his other business and is prepared to receive cut flowers on commission or orders to supply the same.

K.

New York.

There is just a little indication of reviving life in the cut flower trade. In roses, American Beauty, if strictly first-class, takes the lead and brings from fifteen to

twenty cents. Small Beauties are to be had by the bushel at bushel price. Other roses are in general overstocked. From one to three and four cents are the ruling prices for small selected lots, but by far the great bulk of the stock goes to the Greeks at five dollars a thousand.

The only scarcity noted is in white carnations. There is a demand for more than can be supplied and at prices double those received for colored varieties. Bridesmaid, Cusin and Perle roses are abundant and finely colored just now, but sell very slowly. Of the smaller roses none sell better than Kaiserin Augusta Victoria. Next to this comes Meteor.

Most of the rose growers are praying for water. In some sections there is a veritable famine and unless speedy relief comes there will be serious consequences. A new acquisition in the ranks of the rose growers is no less a personage than Mr. James Hart, famous as the first and only original cut flower commission man. Jim is growing some good stock over at his Madison houses and he consigns them to himself. That he will be satisfied with the return slips is to be hoped. "I'm always too easy and soft with them," says he. He's going to turn over a new leaf now and make himself the first victim of the new rules.

The two inseparables, W. A. Manda and Charlie Weathered, have gone to the Lenox Horticultural Society's exhibition. Mr. Manda's new *Adiantum capillus-veneris imbricata* is one of the best introductions of the season.

Boston.

There has never been a time when notes of news or interest were more difficult to pick up in this locality than just now. The convention is already somewhat of an old story, but it still does duty as the main subject of discussion and comment, and the unanimity of opinion regarding its merits is something remarkable. Unfavorable criticism positively does not exist and all who went pronounce it to have been the most enjoyable on record.

Of business, with the exception of a fair run of funeral work, there is none. The summer trade with seaside and mountain resorts, which a few years ago stood Boston in such good stead, is not what it used to be and no longer makes any appreciable impression on the prevailing prices. At all these places local enterprise supplies largely the stock which formerly had to be obtained from distant sources, and it is only when specially fancy goods or unusual quantities are wanted that Boston reaps much benefit.

The weather has been delightfully cool all through this section and rumors of light frosts in various localities are heard. The effect on the stock coming in has been favorable, particularly on roses. It is rarely that such clean well developed roses are seen in this market so early in the season. This superior quality is noted in all the standard varieties, but up to date it seems to make but little impression on customers, unfortunately.

The garden committee of the Massachusetts Horticultural Society, with a few friends, made a visit to the plum orchards and vineyards of George B. Andrews at Fitchburg, on August 29. Grape growing in the hard soil and severe climate of Massachusetts is something more than play, and Mr. Andrews is entitled to the highest credit for what he has accomplished by his perseverance and hard labor. The Delaware grapes are unprecedentedly fine this season, and the plum trees are a sight to behold. Mr. Andrews

attributes much of his success to thorough spraying. The visitors were hospitably entertained and for once had all the plums they could eat.

Elijah Wood, Boston's own "Little Woodie," is about to leave us and go to the far west, and much sincere lamenta-

ELIJAH A. WOOD.

tion is heard. He will leave a vacancy that it will be impossible to fill. The hearty good wishes of a host of friends will follow him and his bride to their new western home, and Boston hereby sends greeting to the Denver brethren unanimously recommending him to their confidence and friendship.

The Arnold Arboretum has acquired an additional tract of land seventy-five acres in extent, formerly known as Whitney Hill. Superintendent Bennett of Schenley Park, Pittsburg, and his right bower, Mr. Burke, spent a couple of days here after the convention and found much to interest them in the Arnold Arboretum and Boston's new park system.

Toronto.

"Canada's great fair," the Toronto Industrial Exhibition, is the big excitement for the two coming weeks, the 3rd to the 15th of September. The flower show in connection therewith promises to be an exceptionally good one, especially in stove and greenhouse decorative plants. The tug of war will be on two sections, one for the best 75 plants distinct varieties, the other for the best arranged table 19 feet by 16 feet. As it will be next to impossible for one to show in the two sections it is probable that the public institutions will show in the former and the florists in the latter. This was the object of making the two sections as they are, the prizes for each are the same, viz., \$60, \$40, \$30, \$20, and are worth straining a point to obtain. Mr. C. Swift, of Rochester, is to be the judge of plants and it is rumored that he has engaged a bullet proof suit, the inventor of which is now in the city. Mr. Swift has, however, given great satisfaction at former shows here and I scarcely think that he will find the aforesaid suit necessary.

The report of the weather bureau for the month of August is quite interesting reading; the total amount of rainfall was only .380, the second smallest in 55 years, and the mean temperature was 65.34, a little lower than the average.

Trade is likely to liven up a little during the exhibition, not because the visitors are at all flower buying people, but they bring money into the city and stir things up generally; business never really permanently begins for the season until the outside flowers have been killed off, and that time is drawing very near now.

The accounts of the proceedings and festivities indulged in by the members of the S. A. F. given by the AMERICAN FLORIST are enough to make those who were unfortunately unable to attend green with envy; what a mistake it is to be

poor. Walter Mott who was in the city the other day says that Canada was not represented at all; this is disgraceful!

E.

St. Paul, Minn.

Trade is improving every day and is fully up to or ahead of the average of former years at this season. White flowers for funeral work and weddings are in the greatest demand. There is a good supply of white roses of fair quality, as well as of other colors. Sweet peas are nearly gone and asters are of poor quality owing to the drouth. We are still suffering from the intense heat and drouth and the long delayed rain will not now be of much material assistance to the dead and dying vegetation when it does come.

Some weeks since your scribe stated that the veteran J. C. Fleischer was retiring from the florist business. This was an error, and we are now advised by Mr. Fleischer that he contemplates building new houses and engaging in the business more extensively than ever.

Mr. L. L. May has just returned from a short vacation spent at Mackinac Island and in northern Michigan. While returning the train on which he was a passenger ran into a landslide near Gladstone, Mich., overturning the car, which rolled down a forty foot embankment. Besides a general shaking up and a thorough scare there were no injuries sustained.

Mrs. Garges, well and favorably known to the trade here as one of the best design makers in the northwest, has removed to Cincinnati, O.

Several weddings are announced for the near future and as society will soon resume its giddy whirl the early fall trade should be exceptionally good. FELIX.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

Secretaries will confer a favor by supplying dates as soon as decided upon. We shall be glad to know of any further shows decided upon and not included in our list, even if exact date is not yet determined.]

WE HAVE received from Mr. W. Baylor Hartland, of Cork, Ireland, an object that recently reached him under peculiar circumstances. It was a large cork upon which had been written simply "Hartland" and a U. S. 5 cent stamp attached. As the "package" reached its destination safely it is fair to assume that our postal clerks are not always dull, and the American wag who perpetrated the joke will probably be pleased to know of its success.

DO YOU WANT the census statistics regarding the florist, nursery and seed trades? You will find them in our trade directory and reference book for 1894. Price \$2.00.

PART II OF THE TRANSACTIONS of the Mass. Hort. Society for 1893 has been received by us. Among much useful matter contained the report of the garden committee will be found specially suggestive.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. L. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

FREESIAS.—Well, the less said about them the better. There are millions of them.

IT IS RUMORED that A. B. Cleveland was seriously injured in a mining accident, having had three ribs broken.

ROMAN HYACINTHS of the large sizes, anything from 12 cm. up are scarce, and prices abroad have advanced sharply. Dutch hyacinths are not at all abundant in the foreign markets. They were offered very low early in the season, but the low offers have all been withdrawn. Stiffer prices are likely to prevail on these bulbs in the future as they have been selling below the actual cost of production and many growers are abandoning their cultivation.

THE seed business formerly conducted by Edward F. Dibble, at Honeye Falls, N. Y., and the produce business of Frank P. Jobs of the same place, have been consolidated under the laws of the State of New York, into the Edward F. Dibble Seed Co., with a paid up capital of \$20,000, and is officered as follows: Edward F. Dibble, president; Frank P. Jobs, secretary and treasurer; and Edward F. Dibble, Frank P. Jobs and Alexander M. Holden, directors.

JAPANESE BULBS, longiflorum, auratum and the like are not likely to turn out as well as expected, owing to the drouth which has prevailed in that country as well as here. The bulbs are small sized in consequence. The effect of the war upon the supply of Chinese sacred lily bulbs is not yet certain. A good many are already on the way. The Chinese in this country say that no more will be shipped, but "the heathen Chinese is peculiar" and all he says is not quite gospel. If he is telling the truth the department stores will have to suffer first.

A Warning.

Look out for a party calling himself John R. Rolker, and falsely representing himself to be the son of Herman Rolker of New York, using his claim of relationship to get drafts cashed. He was last heard of in St. Louis.

WARE, MASS.—Harry A. Tucker was married on August 20 to Miss Lena Lovett.

EASTON, PA.—J. P. Bauman has given up the florist business and sold out his stock to W. F. Keller.

QUEENS, N. Y.—The greenhouses and other outbuildings on the premises of F. J. Lott were destroyed by fire on August 18. Loss about \$5,000.

NEWPORT, R. I.—The amount of \$1,937 was collected by subscription for the purpose of aiding florists whose property was so badly damaged by the great hail storm.

PEABODY, MASS.—John M. Ward, the well known florist, died here August 29, aged 58. Mr. Ward was a native of England, and went to St. John, N. B., some years ago, from there he settled in Peabody. He leaves a widow and several sons and daughters.

McCREA & COLE, Battle Creek, Mich.

PANSIES... Every Grower Claims the Best. I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them. Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price. By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders. An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance. ALBERT M. HERR, L. B. 496, Lancaster, Pa.

Pansy Star Seed. THE JENNINGS STRAIN of high grade Pansy Seed. New crop now ready. Saved with special care from only the very finest varieties and warranted first-class in every respect. THE JENNINGS XX STRAIN. The cream of Pansies. Grand colors mixed, pkt., 1500 seed, \$1.00; 1 oz. \$8.00. The Jennings Strain, finest mixed, pkt. \$1.00 about 2500 seed; 1 oz. \$5.00; 3 ozs \$15.00. No sklm milk in this strain. (They are just as good as I can make 'em). To my old patrons I would say they are a big improvement over last season—more variety and finer colors. The best strain for florists either for winter bloom or spring sales; all large flowering. Black Dr. Faust, finest, pkt., 2500 seed, \$1.00
Finest Yellow, black eye, " " 1.00
Pure White, the best, " " 1.00
Victoria, bright red, pkt., 1000 seed, 1.00
All my own growth of 1894. Half pkts. of any of the above 50c. Please send money orders or registered letter. Cash with order. Address E. B. JENNINGS, Wholesale Pansy Grower, Lock Box 254, SOUTHPORT, CONN.

Roemer's Superb Prize Pansies. The finest strain of Pansies in the World. Introducer and Grower of all the leading Novelties. Catalogue free on application. FRED ROEMER, SEED GROWER, QUEDLINBURG, GERMANY.

A grand collection of giant flowering varieties, very large, of perfect form, and choice colors; carefully selected; better seed plants this year than ever; receive very high praise from my customers; no finer strain offered anywhere; florists should sow of it. Trade pkt., 500 seeds, 25c; 3 pkts. 40c; 6 pkts. \$1.00. A pkt. of the new Monkey Face pansy with every \$1 order. JOHN F. RUPP, Shiremanstown, Pa.

TOBACCO DUST. Per 10 lbs 50c; 25 lbs \$1.00; 50 lbs \$1.50; 100 lbs \$2.50. Extra fine, per 100 lbs. \$5. Sample FREE. Vaughan's Seed Store, Box 688, Chicago.

Cincinnati.

Business undoubtedly is on the increase. Orders to the wholesale houses are beginning to come in, which shows that the smaller cities are awakening from their slumbers. Inquiries are also coming in asking for future stocks, and placing future orders. All this goes to show to we shall have a little business at least.

Fred Walz arranged a golden wedding decoration September 4, using quite a number of Perle roses and yellow cannas in connection with palms. He also showed us some very good seedling carnations; a variegated sort similar to J. J. Harrison is the best one I have seen from his collection.

On August 29, a harvest home festival was held at Cheviot, a small nearby town. These gatherings have been held for the last 30 years in some of the townships in Ohio and Kentucky. They are something on the order of a county fair. The farmers, gardeners and florists bring their different products and exhibit same for premiums. Three of our enterprising florists competed, Adam Frank, J. T. Conger, and S. S. Jackson. Frank succeeded in capturing the prize for best bouquet, best floral design, best hanging basket, and best collection of cut flowers, while Conger won prize for the general display, best collection of geraniums, gladiolus, greenhouse plants and best 5 varieties of variegated plants. S. S. Jackson got prize for best collection of dahlias.

We have quite a number of growers of cut flowers in the small towns adjoining Cincinnati who have started up within the past three years; in fact since the commission houses have started. R. M. Walker of Oxford, O., is one of these. He has six greenhouses, three of them 128x21 and three 70x20. One house and one half he has planted in carnations of the best sorts, and three and one-half houses planted in roses; consisting of American Beauty, Kaiserin Augusta Victoria, Testout, Bridesmaid, Brides, Mermets, Perles, Cusin, Woottons, etc. The remaining house is planted in chrysanthemums, and later will be used for forcing stock. Mr. Walker has as his foreman and grower Henry Stocking from Montreal, Canada, and we expect to see some good stock from this place.

Our visitors this week were Chas. Poment of Greenfield, O., the Messrs. Fisher, and Mr. McKeller, wife and sister from Chillicothe. The latter were on their way to Chicago for a few week's visit. Mr. McKeller is a great friend to the Niphotos rose and grows same to perfection. H. H. Ritter and family have returned home from Atlantic City and New York and is needless to say they enjoyed their trip.

Indianapolis.

Since the opening of September business seems to improve. Several weddings are in view for this month and many in October. Many prominent people are returning from their summer outings; many more than usual have been camping out in tents in the neighborhood, showing that economy has to be used in many families. Surely this has been the dullest summer to the florists in this city, and it seems in many other places; that accounts for the absence of many at the convention. The reports from the bowling contest has started our club members into considering a meeting for the permanent organization of a bowling club; the only trouble here is a suitable place. There is talk of building one of their own.

John Heidenreich & Co. dissolved partnership June 15. Mr. John Grand started a new place as reported previously, Mr. John Heidenreich continuing in the old place, having repaired and arranged the same in splendid shape. Firm name now is John Heidenreich.

Bertermann Bros. have added one house 92x15 for chrysanthemums and forcing lilies.

Lorenz Schwartling, for some years owning the Woodlawn Greenhouses, has discontinued business.

The writer would like to warn florists in prominent cities against a Capt. Ward, claiming to be very wealthy, seems to inform himself of the names and habits of well-to-do citizens, and in that way create confidence. He claims to be intending to buy prominent buildings, etc. He says he buys hundreds of dollars worth of flowers to give away to his friends. Cincinnati has been a sufferer from him. An article in the Cincinnati *Enquirer* put the writer on his guard and prevented him from getting a good round flower bill; when refused credit he grew abusive. He is tall, slim, dashing habit, southern accent in his talk (Kentucky colonel style), wears slouch hat, claims to have been steamboat owner and captain.

The whole committee for final arrangements for the chrysanthemum show to be held here by the state society will meet in this city September 11. All indications are that this year's exhibition will eclipse all others. More plants are being raised and the splendid premium list will fill the hall to overflowing. Many special features will be added, notably a grand rose display. W. B.

Annual Outing of the Minnesota Florists' Society.

The annual outing of the Society of Minnesota Florists this year took the form of a family picnic. Most everyone possessing wife and children brought them along, and a happy idea it was. We hope the ladies felt so much better this year, relieved from worry over their absent husbands, that we will always have them with us at our annual outings. The place selected was Wildwood Park, at White Bear Lake, a beautiful place of easy access from the city, and well provided with bowling alleys and other attractions.

In the bowling match Minneapolis was the winner, though not without a good fight. I think if Atlantic City was not so far away and times better some of the prizes contested for there would have been brought out to the northwest. A running race, ladies' race and other amusements filled up the time. The ball match did not take place, there being so many other diversions, and the balloon ascension did not take place, owing to the balloon catching fire while being inflated.

The outing was a great success, and it is hoped that next year the florists will make it a general holiday, closing their stores, so that everyone can go.

Aug. S. S.

Wholesale Prices of Flowers.

Some misguided individual in the trade has given a daily paper correspondent the prevailing wholesale prices of flowers and the said correspondent has used them as evidence of the large profits made, and the article has received wide publicity. As a consequence some of our readers complain that their customers object to paying such a heavy advance over wholesale rates as published in the article. As it is practically impossible to make the general public understand the wastage that makes net profits necessarily small when gross profits seem large, it is certainly very unwise to make wholesale rates known and the florist who gave out the information used has done the trade useless injury.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all. Send for price list and samples and we know you will give us an order.

Among Chicago Growers.

Bassett & Washburn's establishment at Hinsdale has held for a number of years the distinction of producing the largest cut of American Beauties in the west. Though closely pushed by one other firm in this line Bassett & Washburn still lead in the number of plants grown. 30,000 plants are benched this season and promise good results. But though Beauties are a specialty, this firm also grows a general line of the leading varieties in roses, all of which appear at the present writing in very fine shape. Mr. Bassett has kindly furnished us with some statistics of last season's business, which we hereby append. Says Mr. B.:

"For the purpose of starting the ball rolling and finding out as near as possible 'where we are at,' and in order that we all may gain by the experiences of one another, and for that reason only, I am induced to give somewhat in detail our way of conducting our business of growing roses, etc. In these times of close competition it is necessary that every grower should know the exact cost of production and the most economical way of doing business. The only way this can be accomplished is to keep an accurate account of the receipts and expenses in each and every department. By doing so he will soon learn where the leaks are and where the profits come in, what to grow and what to let alone. This will lead him in time, we have no doubt, into growing specialties, which we believe is the only true road to success. The time for growing a little of everything and anything is past. But there is lots of room on the top shelf and always will be, and he who takes up a special line—it hardly matters what—and grows that specialty to perfection, or as nearly so as possible, will always find a ready market at fair prices.

"It may be possible that if the growers would get into the habit of keeping accurate accounts of their income that Uncle Sam, under warrant of our new democratic income law, would have a better chance of prying into their affairs, but how many of us need be afraid of coming within the range of this law?

"It might be well in the first place to state that we are not practical growers ourselves, only being able to attend to the general supervision of the houses and business, therefore being obliged to hire

competent help it has cost us more to run our affairs than it would had we the knowledge to take the lead ourselves.

"To start with, we will say that about one-half of our houses for growing roses are built on the old plan, the long span to the south, with some houses detached, while others are connected with low saddle roof structures between. The other half are built in the late idea, with the short span to the south, and while we cannot see the least difference in the quality of flowers grown under the same treatment in the different houses, we can see great benefits in many ways of the latter method. In the first place the cost of construction is much less, as the houses all being connected only one outside wall will have to be built in a block of houses, also saving the expense of one-half of the gutters. Besides this there is a great saving of ground space, which cuts quite a figure where the site is an expensive one.

"The beds are all on a level and close to the ground, making it much easier to handle the plants. The saving of heat also is quite evident and is an item in the expense account, as there are but few outside walls to heat, and experience has proven to us the houses are about eight to ten degrees cooler in summer when the sun is shining, and in the same degree warmer in winter. In regard to snow in winter we find that this style is much preferable, as the steep south span keeps always clear, which is not the case with the old house. As to the north span, we find that the snow disappears fully as quickly there as on the other houses. We have built this summer and are now building a number of houses in this style, and can safely say that under no circumstances would we build in future on the old plan.

"Our whole plant is heated by steam by a battery of four large boilers using crude oil for fuel, which after considerable experience with soft coal we pronounce far superior. The saving in labor is considerable, one man being able to take care of any amount of glass and do the watching, there being no coal to shovel or ashes to handle, and if your fireman is competent he can keep the heat in the house without regard to weather at a perfectly even temperature. The fire can be cut off in a second's time when not needed and started up again under full headway at a moment's notice. It is absolutely safe to use, and without the least odor arising from it; there is no smoke to settle on the glass. Where lump coal is worth \$2.75 per ton there is practically no difference in the cost of fuel, and right here we might state that during the past season there has been but one month (July) that we didn't use steam heat in our houses.

"We employ only men of experience in our establishment (no boys whatever, as it takes the time of two men to keep one boy busy). Our houses are divided into

sections or departments, and one man with an assistant where required put in charge, and he is expected to see that everything is kept in good order. He is never asked to go into another section for the purpose of helping out except at planting time, and for that only. A competent foreman or superintendent has charge of the entire plant, who has full power to hire and discharge the men, as he sees fit, and he is held responsible for the proper management of the place. All the work of emptying and refilling the houses with new soil, cleaning up, etc., is done by labor hired for the purpose. By following this plan we know who is responsible for any neglect, and we find every man takes a pride in doing his part properly and keeping the houses under his charge in as good condition as possible.

"In regard to cost in conducting our business we find that it takes within a small fraction of eight cents per square foot of glass for help, five cents per square foot of glass for heating, and about two cents for incidentals, making in all fifteen cents per square foot of glass for heating and taking care of the houses for one year. As to the square foot of bench room, which we do not consider a fair way of getting at the cost, as some growers are much more generous in their walks than others, we find the cost to have been within a fraction of twenty-eight cents a square foot. We estimate that five cents per square foot of glass will pay the interest on the investment and wear and tear of the houses. Our cut of flowers for the past year has been below our average, the cause of which we might trace to several sources. The shortage is most marked in Beauties. We were short of stock of our own propagation and obliged to purchase 5,000 plants; these were from late struck cuttings taken from soft wood, making exceedingly fine growth, but they gave few flowers until spring. The yield of Brides also was very small, the plants being injured by too severe trimming in the fall and meeting with other mishaps. American Beauties, which are our specialty, averaged 13 good salable blooms per plant; Brides, 24; Perles, 33; Kaiserin, 13; La France, 43; Albany, 24; Bridesmaid, 43; Hoste, 25; Mermets, 25; Woottons, 27; Testout, 19; Mermets, 25; Meteors, 33. The above is the cut practically for nine months, as we replant every year, thus giving three months for the young stock to come into bearing. The Testout, Victoria, Hoste and Mermet, however, were thrown out much earlier than the others in order to make room for other stuff, which accounts in a measure for the very small showing of these varieties. We find that plants paid best in the following order, according to space occupied on the bench, the time grown and the price realized: Meteors, Testout, Bridesmaid, La France, Beauties, Perles, Woottons, Brides, Mermets, Albany, Hoste and Kaiserin. The latter were grown only during the winter months and yielded but little, the blooms being of little account. As we do not all have the same facilities in selling our flowers, to give prices received for each bud or the total per plant would not be of much benefit to others, and we will not touch upon that point. When the growers have the good sense to unite in forming an exchange or market on the right principle and then patronize and keep good faith with it, then and not until then will they realize a more uniform price for their stock, but we are afraid that that time will not come very soon, if ever.

"With our experience we have dropped the Hoste entirely, as the color kills it for our market. The Kaiserin with us has proved a very poor winter rose, but we may give it a trial for summer. Testout in our opinion is the best pink rose for winter, but we find it of little use for summer, it being too single. For an all the year around pink variety the Bridesmaid has proved with us the best of all; with us it has taken the place of Mermets altogether.

"Bulbs? Well when you talk of bulbs we know very well 'where we are at.' Our experience with these has been most disastrous last season, and it's dollars to doughnuts that we sha'n't monkey with the buzz-saw again very soon. On several kinds we did not realize the cost of the bulbs, not to mention the labor, and yet we have had probably as good facilities for disposing of our stock as anybody in the business."

The Convention of 1894; Why a Success.

The following collection of views of a few of the more observant gentlemen who attended the meeting at Atlantic City, as to what features of that occasion impressed them most strongly, received in reply to a score or so of inquiries sent out by us, will no doubt prove very interesting to the readers of the AMERICAN FLORIST. We almost regret, on seeing how interesting some of these responses are, that we did not send out many more. But we trust that the suggestions thrown out in them may spur others of our readers to an expression of their own experiences or a discussion of some of the points in question. We shall be glad to give space to all who will favor us with their contribution, only requesting that it be always brief and to the point.

One of the best things about a convention of people who are interested in a united purpose is the resulting contact of individuals who are ready and quick to exchange ideas on a subject which is the common interest of all. This opportunity was appreciated and made good use of by the members of the Society of American Florists. It is not often that one may find such readiness and cordiality which was plainly shown in the short speeches of the members before the convention; I noticed that whatever one member said was supplemented by another; and approval or disapproval was marked by a cordial and earnest effort to reach after what was best and truest. The common business interests of all were discussed in a very interesting way, and certainly the efforts to adopt some new principles of business were commendable in the highest degree. It was more than evident that the florist intended to keep not only abreast, but perhaps a little ahead of the times. If a fair and candid expression of views will help the progress of the florist's profession then that profession is helped.

It is not always the case that a convention means unanimity of sentiment and action; but certainly it appeared to me that this convention did mean that, and therefore I conceive that its object was gained with undoubted success. When one returns home after a search for something good, and the good thing is attained, one is the better and happier for it. In my opinion all the florists must have returned to their homes with heads full of good practical ideas and new aspirations; if this will prove to be the case then we may look for more flowers and

better ones in the future, no matter what we have that seems good enough now, according to my impressions received before the late convention.

F. SCHUYLER MATHEWS.

A successful convention, such as that just passed at Atlantic City, cannot be otherwise than very beneficial to the S. A. F. as a body and to all the members of our craft throughout the country. The points leading to this great success were, first, a good attendance of members, a nice exhibition of choice things throughout well arranged and a very nice sized hall in a very quiet neighborhood for the meetings, where every speaker could be distinctly heard without effort on either side; these combined with the best selection of essays as a whole that we have ever had at any one convention delivered as they were by men who thoroughly understood what they were talking about made every session thoroughly interesting and instructive; and those who did not hear such essays as Mr. Mathews' on color or Mr. Rawson's on 'mums missed a rare treat, for though they have been printed in the FLORIST yet to get the full benefit of the rich juicy meat they contained it was absolutely necessary to have it direct from the essayist's mind. The same remark applies to all the others; each and all had their especial value and excellent points; the discussions of most of the papers read were also very interesting and instructive.

Added to all this the place of meeting, Atlantic City, possesses many attractive features which hardly any other place in the country has for such a gathering. Its fine bracing air, sea bathing, board walk and abundant accommodation, varied as it is to suit every taste and pocket, all tended to make it a general success, and notwithstanding the great attraction of the city a very fair attendance was drawn together each meeting, showing that the florists are earnest in the pursuit of knowledge appertaining to their business, and every live florist who wishes to keep abreast of the times should certainly try to be present to get the benefit of the thoughts of the leading men in their respective lines.

The above are only a part of the factors which were working toward the success of the convention. Some of them could only be discovered by careful study of the situation. The programme of the Philadelphia club's entertainments was certainly on the whole quite a factor in bringing together such a large delegation in such a stringent time as the present, and their leaving each and all ample time to seek their own entertainment (excepting their own committee, who were working hard all the time for our pleasure, all honor and praise to the Philadelphia club) made it very pleasant for all, and the universal comment as far as I have heard has been that everyone was more than pleased and returned to their homes and business feeling that the Atlantic City convention has been one of, if not the most, successful the S. A. F. has ever held, also the most enjoyable to all who visited it, including yours truly,

JOHN N. MAY.

"The wild waves said come," and the florists from the north, south, east and west responded. What made the convention a success? The number that attended and the interest they manifested. Why did they attend? Various reasons; some came to buy, others to sell, some to attain and others to impart knowledge,

THE GREENHOUSES OF MESSRS. BASSETT & WASHBURN, HINSDALE, ILL.

but all to socially meet their fellow members whom they have met before, and have learned by successive meetings to know and appreciate. Each year that the members of the S. A. F. come together marks a mile stone up the hill of progress, and it is higher each time we gather. Not alone the careful essay which has cost the writer hours of weary toil, nor the work of the patient committeeman who had burned the midnight oil for the benefit of his fellows, is all the knowledge we gain at the fraternal gatherings. If all the information that is imparted in the private colloquy, the interchange of opinions that occur around the festive board, or the ideas that are advanced pro and con over new inventions, new plants or novel exhibits, could be gathered and disseminated to the men that do not belong to the S. A. F. would cease to wonder at the success of our meetings. Fun? Of course! It is the spice that flavors. Social intercourse? Yes. It is the salt that savors. But so long as intellect is necessary to produce good plants so long will the S. A. F. be a power in the land.

JOHN G. ESLER.

Freedom from intense summer heat in an invigorating atmosphere, good meeting place, good exhibition, a continuously changing panorama of human nature in good behavior and Philadelphia's lavish entertaining, conspired to make the '94 convention something that will linger in one's memory.

Seriously, I'm inclined to creep into the garb of a cynic maybe, or a pessimist, regarding the S. A. F. convention, though it is much with the craft in general that I'd incline to take issues with.

It seems a bit too bad when all the unselfish work is gone into that the stay-at-homes are so conspicuous by absence. Four ex-presidents were there. Where were Thorpe, Hill, Norton, Dean? Where were scores of others of formerly valiant enthusiasm? We met in a florists' locality, and when only a beggarly 400 there attended it seems as though either the S. A. F. was on a decline or else the apathy of the craft is significantly noticeable. It seems to me that we florists are in the dawn of seeing ahead much that could be undertaken with profit to this generation, and in the interests of coming generations at the same time. It needs more work and less adulterated congratulations on the little that has been accomplished. It seems to me too had that the suggestions of Pres. Anthony about certificates could not be met and handled in some form, no matter much how modified. *Trying* something, even though one may not be fully persuaded of direct success, would be surely better than no effort, and likely would sooner lead to what experience would demonstrate as practical. A dozen points might be almost elaborated on and pointed out, but time forbids, and maybe life is too short for it anyhow.

If we subtract from the attendance the exhibitors and their attaches and those who came to be amused *only* and to vote, and consider the very small territory of this large U. S. that was covered or represented by attendance, is there anything to boast about in this, the 10th year of the S. A. F.

DAN'L B. LONG.

The exhilarating effect of the delightful

climate of Atlantic City on the spirits and the appetite, the novelty of the surroundings and freedom from restraint, the gratifying combination of business and pleasure, the hopefulness for the future caused by the recent removal of business uncertainties, the progressive spirit shows in the essays and discussions, and in the general business of the convention, the generous and systematic work of the entertainers, the hail-fellow-well-met feeling of everybody—these, in my humble opinion, are among the elements which made the tenth annual a big success.

Among the individuals who helped—I don't know what we would have done without such omnipresent, impossible-to-tire-out people as Stewart, Craig, Burton, Westcott, Kift, Ball, Scott, Lonsdale, Battles and others who had the peculiar gift of being able to keep wide awake all day and never go to sleep at night. "Falstaff" and his henchman "Bardolph" will live long in our memories, and I suppose will be talked of when more important things are sunk in oblivion. In their way they certainly helped to make the convention a success. The bowling and shooting matches are all right; they work for ultimate good, like good music in a church. Let the dance go on.

G. C. WATSON.

The convention was an unqualified success in every particular.

The essays were of a high order, practical and of the greatest usefulness to the profession. I doubt if ever so much good sense was ever laid before any previous convention.

The fact that Atlantic City is on our

extreme eastern shore, combined with hard times, accounts for a slim attendance from the north and western states. Particularly was it noticed that not a single Canadian could be found, more the pity.

The oratorical display of illuminated blank verse poetry by G. P. Rawson was the bright star of the convention and lifted its author at one bound from a star of the third magnitude to a planet the size of Jupiter.

It is to be regretted that large audiences cannot be induced to listen to the essays and discussions. This is largely accounted for by the essayist reading his own effusion, and in most cases not having voice enough to be heard beyond the first half dozen rows of seats. A pantomime of the Merry Wives of Windsor may go, but a pantomime on the culture of some particular plant produces drowsiness. None but good loud clear readers should occupy the platform.

The all round pleasant, instructive, enjoyable and withal decorous meeting must be first attributed to the able and generous management of the Philadelphia Florists' Club, and next to the beautiful and health giving city at which the convention was held.

WM. SCOTT.

It was a good convention throughout. The essays with the exception of mine were good and up to date. It was worth the trip from Iowa to hear Mr. Rawson deliver his alone. Mr. Taylor's essay on roses was very instructive, and from Mr. Mathews' on colors I learned a great deal, and we all could hear all the remarks and essays, so that they were all instructive and interesting to those who love our profession. The Philadelphia Florists Club managed to have the exhibition and convention halls close together, and made it agreeable to all.

To one who started out with the intentions to learn and also to enjoy life Atlantic City is the place. The salt water bathing is excellent, as I know from experience; the oysters are extra good and the beach and the board walk are a perfect Midway of sights and pleasures.

Taking everything into consideration the convention at Atlantic City under the auspices of the Philadelphia Florists' Club could not be anything else but a success. No live, wide-awake florists can afford to stay away from such a grand convention where there is so much food for thought.

J. T. TEMPLE.

The contributory causes leading to the success of the Atlantic City convention of the S. A. F. would be summarized by me as follows:

The magnificent weather, the unique city by the sea, the sea itself with its grand beach, the open handed hospitality of the Phila. Florists' Club, the perfect arrangements; all these rested the body and mind and prepared everyone for the business of the convention. To these I would add: The remarkably good trade exhibit, the excellent essays, notably the ones delivered by Messrs. Grove P. Rawson and F. Schuyler Mathews, the candidacy of two such splendid men for the presidency, showing that the honor is not considered an empty one; the election of such a fine board of officers and last, but not least, the unique and pleasing series of entertainments provided by the Phila. Florists' Club.

The most valuable feature of the convention I think was the trade exhibition.

PATRICK O'MARA.

I hardly think that my individual opinion would be valuable as comparative, since I have not attended any previous convention. But the attractive feature of the Atlantic City meeting was the friendly spirit of true hospitality as evidenced in many ways by the Philadelphia brethren and the florists clubs generally.

I offer suggestions for future conventions: 1.—Evening of first day, President's reception, where everybody shall be welcome and become better acquainted with each other. I should like to see this feature carried out at Pittsburg. I think it would be a worthy compliment to the president and satisfactory all around.

2.—Discussions led by so and so, with the speaker as chairman pro tem, and he to call out from individual members the salient points of the subject in hand, also inviting free discussion.

A change in programme often develops new interest, even if there is no great improvement as a whole. As an age we demand more or less novelty.

GROVE P. RAWSON.

The discussion of the chrysanthemum was a very good and interesting one.

How to obtain a good practical man: Mr. John May's opinion was the best to my knowledge. By personal experience as soon as I enter a florist's place I can judge at a glance whether a man may be entitled to a recommendation or not.

The success of the convention is due to our Philadelphia brothers, for which we must reward them with the highest credit, because the harmony was so well preserved that nothing was left undone to make every one's heart joyful.

The only further remark I have to make is that in the future a little more time may be devoted to business matters and not so much to pleasure, to keep the society in prosperity.

CHAS. ZELLER.

The recent convention held in Atlantic City will no doubt have a lasting impression upon all who were at the meeting. It would be difficult to pick out the star attraction, either business or social. The essays were of a high order, very instructive and entertaining. I will repeat the remark made by an old gentleman from a Pennsylvania town, which I think gives a fair expression.

"The present convention shows marked improvement over those of the past; it appears to me that each year there is an upward tendency in all the business and social matters, which is a wholesome indication."

D. D. L. FARSON.

The exceedingly practical talks of Mr. F. Schuyler Mathews on color, and Mr. Grove P. Rawson on the evolution of the chrysanthemum, were to my mind the gems of the convention. Add to these the other valuable papers prepared and read, the very successful manner in which the programme was carried out each day and the lovely bracing weather it was our good fortune to experience, and you have the reasons the recent convention was such a success.

ROBERT KIFT.

1. The perfect arrangements of the several committees of the Philadelphia Florists' Club, every detail having been carried out to the letter. The proverbial hospitality of the Phila. boys would make any undertaking a success.

2. The trade exhibit, which I consider the best that the S. A. F. meeting ever had.

3. The essays, which in my opinion were practical and very instructive, that

of Mr. Grove P. Rawson on "mums" being worth the trip alone.

4. The meeting place and its environments, the cool breezes, the dip in the briny deep, which would dispel any tired feeling and open up a new line of thought.

H. L. SUNDERBRUCH.

The clear, concise and very able, scientific and practical essays read at the meetings of the Society of American Florists at Atlantic City, with the absence of tediousness at the meetings; the very interesting and varied exhibits, the fine location and delightful weather, the courtesy and kindness of the brethren, especially of New York and Philadelphia, combined to make the meeting to me the most impressive, progressive and enjoyable I have attended.

JOHN SPALDING.

Our Atlantic City convention was a success because the members had something to say and said it well, and because the exhibition was the best we have ever had.

It would be hard to designate any one special feature as being the most valuable, for it is the diversity of the subjects treated that really is the key to success.

One great feature was the freedom from noise and turmoil, which enabled an ordinary speaker to be heard, and thus encouraged us to have something to say.

A. M. HERR.

The essays delivered at Atlantic City together with the hospitality of the Philadelphia Florists' Club will live in memories of the members of the S. A. F.

EUGENE DAILLEDOUZE.

The "Goose Flower."

The wonderful effectiveness of "popular" names was well illustrated by a recent experience of Mr. Fred Kanst, superintendent of the South Parks, Chicago. When the *Aristolochia gigas* Sturtevantii began to bloom it attracted some little attention, but not to any very great degree until in conversation with a reporter for a daily paper Mr. Kanst called it the "goose flower" in response to the reporter's demand for its "common" name. The next day there appeared a very "taking" article on the wonderful "goose flower" in bloom at the park greenhouses, and for a week or more the crowds of visitors were handled with difficulty. It was necessary to form a line and pass the people in front of the vine as quickly as possible in order that all might have a glimpse of the flowers.

Our illustration shows a few of the flowers as placed for the visitors so the curious form might be readily perceived. At the left is seen Mr. Kanst's son Edward holding one of the flowers.

At the World's Fair Chrysanthemum Show a whorled anemone flower to which was attached the name "Ferris wheel" attracted more attention from the general public than any other one flower and it was made much of by the reporters. There is no doubt that the newspaper reports of this flower brought many people to the show who would not otherwise have come.

Will it not be wise for the managers of exhibitions to prepare for the edification of the reporters and the general public a few catchy names of this sort? They would surely have great advertising value, and if not overdone would not detract seriously from the dignity of the exhibition.

THE "GOOSE FLOWER."

Seasonable Work Among Decorative Plants.

The month of September is one of the best in the year for growth among palms and other decorative stock, but from the fact that the nights are usually very damp at that time it is advisable to use a little judgment in the matter of syringing and watering, and to perform these operations somewhat earlier in the day than is found necessary during the early summer. Palms in general will now be benefited by a little fire heat at night, but as long as the weather will permit it is good practice to keep the ventilators open to a reasonable extent during the night, this treatment tending to produce stocky growth and firm and substantial foliage, both of which are important points in the durability of plants that are to be used for house decoration.

Cleanliness is of course an important item in the production of perfect foliage, and with this in view a continual warfare must be waged on the many insect pests to which our most useful foliage plants are subject, and at no season is this warfare more needed than just now, for with the application of fire heat a fresh outbreak of scale, red spiders and thrips may be looked for, if any there be about the plants or houses. It is possible to have perfectly clean stock if one can grow them on from the seedling stage in a clean house and keep them isolated from any infested plants, but such favoring conditions are seldom found in everyday practice, and we therefore find it necessary to dip or sponge with some insecticide at more or less frequent intervals in order to produce salable palms.

Shading is still needed for this class of plants, though not so heavy a coating

should be allowed on the glass as is required at midsummer, else the foliage will become soft and drawn, and naturally such foliage will not stand the exposure incident to decorating.

It is not yet too late to pot on thrifty young plants of the usual trade species of palms, for there are still several weeks of good growing weather in which this late potted stock will become nicely established, but between November 1 and February 1 comparatively little growth is made by palms, and I do not think much headway is gained by potting during that interval. It is also good practice to set over the plants on the benches frequently, not only for the purpose of weeding and cleaning them, but also to turn them around and thus prevent any one-sided growth, at the same time giving space enough for perfect development, it being poor economy to crowd too many plants on a bench.

To the small grower there is but little profit in buying palm seeds with a view to raising his own stock, and it is much more satisfactory for him to buy healthy young stock from a large dealer, thus making sure of a given number of plants instead of trusting to the uncertainties of a seed deal.

Pandanus are among the useful decorative plants in many localities and at this season should be growing freely, and require plenty of light, air and space to insure a stocky growth. These plants enjoy good living and can utilize a considerable amount of fertilizer in the soil, probably the safest agent for this purpose being some well rotted and rather dry stable manure. In potting pandanus it is best not to ram the soil too hard, the coarse fleshy roots of these plants prefer-

ring a somewhat loose soil, and the potting operation is still in order for any stock that is likely to suffer for root room before the days begin to lengthen again.

The propagation of *Ficus elastica* by topping can be readily managed at this time, and the young plants will be a useful size for next spring's sales if they are given reasonable care. In fact this method of increase may be practiced successfully at any season, but during the winter months will occupy a much longer time than in summer.

The various small plants that are so useful for window boxes, mantel decorations and other purposes, and among which are *Acorus japonicus variegatus*, *Maranta Massangana*, *Cyperus alternifolius* and its variegated form, *Rex begonias* and *Reineckia carnea* var., should also be watched over and prepared for the coming season, for a suitable stock of such plants will greatly simplify the labor of decoration and furnish the means for some very pleasing effects.

W. H. TAPLIN.

Mass. Horticultural Society.

AWARDS MADE AT THE ANNUAL EXHIBITION
SEPTEMBER 5-6.

Palms—Pair in pots or tubs not more than 24 inches in diameter, Dr. C. G. Weld. Pair in pots not more than 14 inches in diameter, N. T. Kidder.

Greenhouse plants—Six greenhouse or stove plants of different named varieties, N. T. Kidder; second, J. L. Gardner, third, Dr. C. G. Weld. Single plant for table decoration, dressed at the base with living plants only, the second prize to N. T. Kidder; third, E. S. Converse.

Ornamental leaved plants—Six named varieties not offered in the collection of greenhouse plants, crotons and dracanas not admissible, N. T. Kidder; second, N. T. Kidder. Single specimen, variegated, named, not offered in any collection, N. T. Kidder; second, Dr. C. G. Weld; third, Dr. C. G. Weld.

Caladiums—Six named varieties, N. T. Kidder; second, Dr. C. G. Weld.

Ferns—Six named varieties, no adiantums admissible, N. S. Kidder; second, Dr. C. G. Weld.

Adiantums—Five distinct named species, Dr. C. G. Weld; second, N. T. Kidder.

Lycopods—Four named varieties, N. T. Kidder; second, Dr. C. G. Weld.

Dracaenas—Six named varieties, Dr. C. G. Weld; second, N. T. Kidder.

Crotons—Six in 6-inch pots, Dr. C. G. Weld; third, J. L. Gardner.

Nepenthes—Three plants, named, J. L. Gardner.

Orchids—Six plants, named varieties, in bloom, J. L. Gardner. Three plants, Benjamin Grey. Single plant, J. L. Gardner.

Tuberous begonias—Six pots of six varieties, C. E. Weld; second, E. S. Converse; third, C. E. Weld; fourth, Bussey Institution.

Awards for flowers, Theodora Lyman fund—Aquatic plants, display, including not less than 12 flowers of nymphæas and nelumbiums, John Simpkins; second, Daniel D. Lee; third, L. W. Goodell.

Asters, collection of 50 varieties, one flower each vase, Sumner Coolidge; second, Charles H. Yates; third, John L. Gardner.

Dahlias, double, 12 blooms, distinct named varieties, John Parker; second, W. W. Rawson; third, Wm. C. Winter. Six blooms, W. W. Rawson; second, John Parker; third, Lawrence H. Parker. Specimen bloom, John Parker, "James Cocker;" second, Wm. C. Winter, "Black Knight." Liliupitium display, 25 bottles, not less than eight named varieties, W. C. Winter; second, Wm. C. Winter; third, W. W. Rawson.

Lilium lancifolium—Collection of named varieties, Sumner Coolidge. Tropæolums; display filling 25 vases, Dr. C. G. Weld; second, William Patterson; third, A. L. Cain. Marigolds, display of French and African, filling 25 vases, F. B. Hayes; second, Bussey Institution. Cannas, collection of not less than 10 named varieties, in spikes, with foliage, David Fisher; second, W. H. Cowing. Double zinnias, 25 flowers, not less than six varieties, F. B. Hayes; second, Dr. C. G. Weld; third, Mary T. Goddard. Single dianthus, collection of annual and biennial varieties, filling 50 bottles, F. B. Hayes. Basket of flowers, best arranged, Mrs. E. M. Gill. Native plants, collection not exceeding 40 bottles, Mrs. P. D. Richards; second, Geo. H. Grinnell; third, Misses Eleanor A. and Mollie S. Doran.

Certificates of merit were awarded to John Simpkins for *Nymphaea delicatissima* and *Nymphaea Deanaiaua*; to R. & J. Farquhar & Co. for new cannas, to the Oasis Nursery Company for tuberous begonias and to W. A. Manda for *Adiantum capillus-veneris imbricata*. P. Bisset received complimentary notice for seedling nymphæas.

Cemetery Superintendents Meet.

The eighth annual convention of the Association of Cemetery Superintendents was held at the LaFayette Hotel in Philadelphia, September 11, 12, and 13. The proceedings of this association, which is so closely allied in many respects to horticulture, were of a very interesting character. At least half of the members are or have been florists or associated in some way with the business.

The first meeting of the society was held in Cincinnati with fifteen members present. The membership has now grown to about one hundred, and some seventy-five or more delegates attended the past convention.

The officers are President, Wm. Salway, Spring Grove Cemetery, Cincinnati; Vice-President, Timothy McCarthy, Swan Point, Providence, R. I.; Secretary and Treasurer, Frank Eurich, Woodlawn, Toledo, O.

Among the most interesting papers read and discussed were: "What are the advantages to the management; also to the lot holders, of the modern or lawn plan of cemeteries?" by Mr. Robert Schrivener. "Suitable trees and shrubs for a modern cemetery," by Thos. B. Meehan, "How to make and care care for a lawn," by Henry A. Dreer. There was also an address from the Memorial Art League of Philadelphia which was very interesting, the paper showing conclusively the difference between the artist and the artisan. The speaker praised the association and said the League was glad to encourage all effort that tended to improve and elevate the tastes of the people.

The lawn plan for the improvement of

cemeteries seemed to be the main question in the minds of the delegates in their visits to the local cemeteries. The modern cemetery is to have as near as possible the appearance of a well kept park with beautiful lawns. The lots are not to be divided by fences or stone copings. There are to be no gravel walks, only the driveways. The foot paths are sodded. The corner stones marking lots are to be level with the ground, only low headstones are allowed to mark separate graves but each lot can have a monument to suit the owner's fancy. The lot holders are also to be restricted as to the kind of flowers and shrubs they are to plant. Vases are to be tabooed as the superintendents say they are more often objects of neglect than ornaments. The planting of perennials rather than annuals is to be encouraged. K.

Toronto.

The Industrial Exhibition opened on Tuesday last and will be in full swing until the 14th inst. At present only the plants are to be seen in the horticultural building; the cut flowers and designs appear during the last of the week. The show of plants is probably the largest and best that has ever been made in this city, and those who have attended Toronto flower shows will know that that is saying a good deal, but still one hears the same old complaint from the public—not enough flowering plants—too much foliage. Of course there are a good many flowering plants, but with the exception of three or four big allamandas and a few orchids they are small and a little ordinary compared with the foliage plants. There were five competitors in the section for 75 stove and greenhouse plants, distinct varieties. John Chambers, Exhibition Park, took the first prize with a truly magnificent lot; every plant was a healthy, well grown specimen; they do Mr. Fred Bromham, the man who did the actual work of growing them, the highest credit. Among the plants worthy of special notice were *Adiantum cardiochloenum*, *Woodwardia radicans*, not a spot on it; *Microlepia hirta cristata*, a simply immense specimen; crotons in variety, lusty and well colored; aloccasias, anthuriums, marantas, dieffenbachias, etc., etc. Next came Mr. W. Houston, from the Central Prison, with a very fine lot also, more especially in palms and tree ferns; the other plants were very good also, but smaller than the preceding lot. Mr. Geo. Reeves of Reservoir Park, third with a good lot of plants, but not in quite as good health as usual. Messrs. Manton Bros. and John Cotterill came in a tie for fourth prize, all good salable plants with the exception of a few old stagers.

For the tables 16x19 feet the most tastefully arranged there were three entries; Mr. W. J. Laing got his due award this year, coming in first for a really beautiful arrangement. Mr. Laing seems to have a bred and born taste for arranging plants naturally and artistically. Messrs. Manton Bros. were next with a very pretty table, and John Cotterill third with a table containing lots of good plants, but having the appearance of being packed too closely, an improvement, however, on the usual clipped bank. But, goodness gracious! it is incredible the number of plants it took to fill these three tables; the prizes need be pretty good to pay for the hauling.

For 12 stove and greenhouse plants John Chambers also took first prize with a fine

lot; Geo. Reeves second and Wm. Houston third.

For the 24 and 12 stove and greenhouse flowering plants John Chambers first again and Manton Bros. second.

Ferns made a big show, some immense specimens being shown. Mr. Houston in the 12 for which he took first had a magnificent *Neottopteris nidus avis*, *Adiantum formosum*, *A. trapeziforme*, *Alsephila australis*, *Microlepia hirta cristata*, etc.

For the 24 in 6-inch pots John Chambers was once more first, Horticultural Gardens second (A. Watkins) and the Asylum (J. Graham) third.

For 50 ferns in 3-inch pots there were 6 entries; John Cotterill first, W. J. Laing second and A. Gilchrist third. There was also a large exhibit of palms of all sorts and sizes, the plants being very good and the competition keen.

Orchids outside of a few nice cattleyas did not amount to much; some good things were shown in the new and rare section. Among Mr. Houston's lot I noticed *Strobilanthes Dyerianus* (a new bedding plant), *Dracaena Sanderiana* (exhibited at the World's Fair for the first time last year), *D. Leopoldii*, *Croton Goldring*, etc.

The above are only some of the principal sections. It is a pity there was not a more suitable building to put them in, but it is hoped the directors will manage to get up a decent one before the next show. As I mentioned in my last notes, Mr. Charles Swift of Rochester acted as judge, and as far as I could see performed his difficult task well. A little grumbling only was reported, but where the competition is keen and close that is inevitable.

Victoria Kandii has been blooming in the lily pond at the Central Prison. This is probably the first *Victoria* that has deigned to bloom in Canada in the open air. The pond is warmed by the exhaust steam from the prison workshops.

Some very heavy showers have visited us during this last week and vegetation is looking decidedly fresher. There will be no more need of hose outdoors this year. E.

New York.

Transient trade has begun to pick up a little with the retailers but the wholesale dealers find business decidedly unsatisfactory as the cut continues to increase and the summer shipping trade comes to a close. The retailers have not yet got sufficient confidence to buy any stock on chance. A vase or two of almost anything in the flower line suffices for a window decoration and beyond that they buy when they get an order and not till then.

The market is undoubtedly destined to have a full test of its capacity for American Beauties during the coming season. Many growers who for one reason or another have let Beauty alone hitherto have taken it up this year and planted one or more houses of it. When the full crop begins to make itself felt then the strain will come. One thing is certain, if a grower is to make anything out of Beauty this year his stock must be first-class.

The meeting of the Florists' Club on Monday evening, September 10, was the most poorly attended for many moons. Beyond a couple of committee reports little business was transacted. The arrival of Capt. Leuly at a later hour with the handsome second prize pitcher under his arm, which his bowling team had won at Atlantic City, was the signal for a

round of applause. Considerable sparing followed between Capt. Leuly and Mr. Ernest Asmus as to who should be entitled to the honor of filling the pitcher. The result was a compromise for they finally locked arms and marched out together, returning in a few minutes carrying the now heavy pitcher between them, whereupon the boys all fell to and sampled the contents.

A vote of thanks was passed to John Lewis Childs, F. R. Pierson and A. S. Burns, in acknowledgement of the flowers contributed by these gentlemen for the decoration of the tables on Steamer Priscilla on the occasion of the breakfast given to the Boston delegation to Atlantic City and also to C. H. Allen for similar donations from that gentleman for the decoration of the special train.

The new office of Mr. A. Rhotert, agent for Vilmorin's electros, at 26 Barclay street, is handsomely fitted up, the walls being hung with many fine colored representations of fruit, vegetables and flowers. A glass case contains samples of papier mache imitations of vegetables useful for seedsmen's show windows and there is on file a full collection of all the electros and publications of Vilmorin, Andrieux & Co. Visitors are always welcomed.

August Rolker & Sons started the auction season on Wednesday, September 12, with a big and successful palm sale, and will continue hereafter on every Tuesday and Friday. Orchids from the estate of the late F. T. McFadden will be the specialty at Wm. Elliott's on Tuesday, September 18.

The display of geraniums at the Essex Heights Floral Co. has been exceedingly fine this year, there being five beds, each one thousand feet in length, and the dry weather being just such as geraniums revel in. There are 175 varieties in the collection.

Wm. Tricker & Co. report a constant stream of visitors, sometimes over one hundred a day to see their display of aquatics at Clifton. The largest plant of *Victoria regia* has fifteen leaves on it, and produced a dozen flowers last month.

Adolph Schrage, for several years bookkeeper and office manager for Julius Rochrs, is locked up and awaiting trial on the charge of raising a check for \$29.40 to \$100.

Boston.

The new quarters of the Growers' Co-operative Association on Park street are now completed. The choice of stalls was auctioned off on Thursday, August 6, N. F. McCarthy officiating with much acceptability as auctioneer. The best locations brought good premiums, and the amount realized from the sale made quite an addition to the treasury of the association.

We have had several copious rainfalls within the past week, and outdoor vegetation begins to show the good results of the much needed wetting. Outdoor shrubbery has suffered very severely, and much of it is already dead, and fruit is dropping off prematurely.

The cut flower trade has not improved any since last report. A fair call for white carnations and asters is noted. Thoroughly cold weather is needed to give business a start.

The Boston delegation for the convention of Cemetery Superintendents at Philadelphia started via Fall River line on Sunday p. m., 9th inst. Among the number were Henry Ross and H. W. Ross of Newton Cemetery, G. W. Cressey of Har-

mony Grove, Salem; J. F. Shapleigh, Cedar Grove, Dorchester; W. Stone, Pine Grove, Lynn; and Mr. Smith, Holyhood, Brookline.

The gold watch and chain which was the outcome of the little paper which was circulated among the truly elect at Atlantic City arrived at its destination, Little Woodie's pocket, by express a couple of days before his departure for the West. The recipient is very proud of it, as he has good right to be, for it is a beauty and will no doubt be a continual reminder of his old friends and the good old times.

Thomas A. Kilduff, a highly respected member of the craft, and member of the Gardeners' and Florists' Club, died at his home in Dorchester on September 3.

Philadelphia.

Joseph Marschultz, of Marschultz & Co., the florists' supply dealers of North Fourth street, this city, died September 7, aged 42 years. The deceased was connected with the firm of M. M. Bayersdorfer & Co. for a number of years, withdrawing finally he entered into partnership with M. Bacharah, now deceased, and established the present business. Some time after Mr. Bacharah's death another partnership was formed which continued a few years and was dissolved to form the present firm of Jos. Marschultz & Co., the company being M. Rice. Mr. Marschultz was a perfect gentleman as well as a good business man and was much esteemed by all who knew him.

A scamp who represented himself to be connected with S. Mount & Co. of St. Louis, is going the rounds of the eastern cities working the bogus check and confidence game. It seems strange that men will continue to be caught giving change for worthless checks on account of large bill of goods sold. He was turned down at H. A. Dreer's, H. Michell's and John Gardiner & Co.'s, but succeeded we are told in some other places. He had evidently just come from Baltimore as he gave checks on banks of that city. Word had been sent to Philadelphia of his coming but too late. H. A. Dreer gave him a receipted bill for an order of goods bought but held them and soon found the check worthless. He has been heard from in New York. He is described as about five feet nine inches tall, dressed in black frock coat, light pantaloons and broad brim straw hat. He is a fair talker having some knowledge of the business, but his writing is anything but business-like. The police of New York and Boston have been notified and it is likely he will soon get his deserts.

James Mackay, lately foreman at the Rowlandville Nurseries, Phila., has been appointed to take charge of the Rosemont Nurseries, at Catonsville, Maryland. Mr. Mackay has had an extended experience in both private and commercial places, having managed the celebrated Hoey estate at Long Branch when it was at its best, and has also been engaged with such firms as Hallock, Taylor and others in the commercial line. His new employer is to be congratulated on having secured a first-class all round man to build up his rapidly growing trade in the delightful suburb of Baltimore.

Chicago.

There is very little improvement in the cut flower trade as yet. The past week has been extremely quiet. With a full supply of good stock, particularly in roses, the market was weak and prices

in consequence had a downward tendency. Nominally the quotations remain the same, but the returns made to the grower disclose a different story. One of our rose growers states that the net proceeds of 5,000 buds sent in last week was \$14.65, a little less than 30 cents per 100. This figure would hardly pay for the picking not to mention cost of production. Beauties are about the only roses that meet with fair demand; these hold their own at from 8 to 12 in spite of a constantly increasing supply.

The copious rains of the last ten days or so is proving of great benefit to carnations and violets that are still in the fields. Although the general average is below the standard a few weeks of this kind of weather will make a wonderful improvement in the size of plants.

Dahlia's are now coming in but are of indifferent quality. Asters are still abundant but with few exceptions rather poor. Joe Smart of Hyde Park, is, however, cutting some very fine ones of the chrysanthemum type.

Poehlman Bros., of Morton Grove, have added six new houses 125x18 to their establishment; these are planted to roses.

Worcester, Mass.

The drouth has continued to hold undisputed sway, and vegetation has suffered terribly in consequence; the long delayed rain which we have all been praying for came on Thursday morning, and was indeed a blessing.

Carnations lifted a great deal better than could reasonably be expected, and though somewhat smaller than usual are in a thrifty condition. Violets planted in the field were a failure, as it was impossible to keep off the spider; those planted in the houses are looking well. Chrysanthemums and roses are in excellent condition. Lange is cutting some splendid Mermets, and Fred Madans is bringing in some very good mignonette.

The horticultural exhibit at the New England fair was very good as a whole, made up of the usual things in summer flowering stuff, relieved here and there by groups of palms and foliage plants. The display of oval and handle baskets and vases of cut flowers made a bright and attractive spot in the hall, but the designs as a rule were made up of very vivid colors that were not arranged harmoniously; the most attractive vase, an arrangement of pink asters and *Asparagus plumosus*, was shown by Mrs. F. H. Merrifield. If the ornamental foliage plants had not been crowded so closely they would have made a much better effect, as the quality of the plants was first-class and the variety good. F. H. Wesson and F. A. Blake carried off first and second prizes. Very good exhibits of gladioli were shown by H. B. Watts and F. A. Blake.

The regular weekly exhibition of the horticultural society was one of the best and largest displays we have had this season; as there is a good natured rivalry between the two societies, everybody made an effort to bring an especially good display, and the result was a splendid exhibition. Probably the stands of cut flowers were the most attractive, and there was an unusually large number of entries; H. F. A. Lange was awarded first and A. A. Hixon second. The exhibits of bouquets were very good in both amateur and florist classes and were made up in very good taste; H. F. A. Lange first and W. J. Wood second in the florist class; amateur, F. A. Blake first and H. A. Jones second.

The display of large flowered and pom-

pon dahlias was also exceptionally good and made a handsome table; J. A. Abbott and F. A. Blake took first and second respectively in the large flowered, and F. A. Blake and A. A. Hixon in the pompon class. Edward Hall was awarded first, with H. B. Watts second, for a splendid display of nasturtium and tropeolums. Several good stands of verbenas, made up of good varieties and well staged, were shown, and in this class H. B. Watts was first and H. A. Jones a close second. A splendid display of stocks was put in by F. A. Blake and H. B. Watts showed some splendid gladiolus. Fred Madans exhibited two stands of cut flowers, which were very creditable. About twenty gratuities were awarded.

SEEDLING.

St. Paul.

Trade continues to improve though slowly. The growers were the first to feel the effects of the general depression and will be the last to recover from it. Retailers have obtained as high or higher prices this year than last, while growers have witnessed a gradual drop from month to month. Country orders are coming in more freely and this with an increased demand for funeral designs keeps the supply down.

Bright sunny days has been the main feature of the weather and has brought blooms out in good shape. Meteor and Kaiserin are very fine. A few cold nights have necessitated firing to prevent mildew and its disastrous consequences.

Carnations are being housed as rapidly as possible. The new varieties have made a splendid growth while all are looking better than we anticipated earlier in the season. Our growers have not paid the same amount of attention to the "Divine Flower" that they have to the rose, consequently we cannot boast of their products in that line. The newer varieties shipped in from the best carnation growers show more vigorous healthy growth because they were propagated from plants used only for propagating purposes. What can we expect when we force the plant to give us all the bloom possible and then further drain it by taking cuttings for the propagating bench.

Uncle John, which gives promise of so much has shown a decided tendency to rust. We trust this is not a peculiarity of this variety as its robust habit of growth, its long stems and its large solid blossoms of purest white commend it to every grower.

A light frost nipped the plants at the park quite a little and damaged all tender plants somewhat. The drouth continues and there is but little left for Jack Frost.

In our sister city, Minneapolis, trade is reported dull. Department stores there are handling roses again, in fact have been selling more or less all summer, and this has hurt local trade. Inquiry reveals the fact that these flowers are purchased mostly in eastern cities, so that our home florists cannot be blamed for "killing the trade" in this instance.

There has been an unusually large number of weddings this month and as there are quite a number of store openings just now palms and decorative stock are in good demand.

Elaborate wedding decorations are very rare here. People are not educated to it and our florists are not making any efforts to educate them. No class of work is more remunerative to the florist than this. Palms, ferns, etc., are now quite cheap and while they are bound to be

killed by constant use for decorative purposes, they can be made to pay for themselves several times over. Besides the artistic taste of the florist will be displayed and his business advertised by a neat and tasty decoration—a decoration in the true sense of the word.

The Annual State Fair is now being held at the grounds in this city. We hope to see a goodly display of plants, cut flowers, etc. Several good premiums are offered and the inducements to our florist friends to display their goods are greater than for any other line.

The annual meeting of the Society of Minnesota Florists will be held in this city September 13. We hope to see the boys turn out and devise new plans for closer union.

H. Bunyard of Short Hills, N. J. was a caller during the week. FELIX.

Cincinnati.

During the summer months and very frequently during the winter we have not been able to get a quorum to attend the monthly meetings of our florists' society. Saturday evening should have been and was the 71st monthly meeting, and only five out of a membership of over one hundred attended. This is decidedly wrong; very much good will come from these meetings if well attended. It is very little encouragement for a member who is willing to work and prepare a paper to read at these meetings, to find only a half dozen listeners. Our quarters are in the flower market, it does not cost the society a cent for the use of the hall, and there does not seem to be any good excuse why we should not have better meetings.

Trade in this city is gradually on the increase, and our store men all feel pleased with the outlook. Flowers, especially white stock, are very scarce owing to the dry weather, and only tuberoses and balsams are available at this writing. Roses are coming in more freely, but are not strictly first-class yet. The prices fluctuate; the best bring 3, but many sell for much less.

Carnations are improving some, and the best sell for 75 cents per 100 field grown. Many of our growers are now lifting, and before very long we shall be sending out some very handsome blooms from this market. American Beauties from Rosebank have put in their appearance and are good. Lily of the valley will be ready by September 25. The Dutch bulbs, as well as French, are being distributed rapidly to the growers and it will not be long until forcing stock will be with us.

T. W. Hardesty had a very handsome decoration at the Grand Hotel September 4, the occasion being the annual banquet of the Railway Mail Service. The flowers used were mixed shades of gladiolus, intermingled with ferns and palms; the effect was beautiful.

The Hoffmeister Floral Co. say they have been very busy with funeral work and birthday decorations.

Critchell & Co. furnished the yellow buttonhole bouquets for the yellow faction of the Chamber of Commerce, this being election day on 'change.

Geo. Meek of Covington, Ky., says trade is improving across the river, and several wedding decorations in sight.

Mrs. H. L. Garges, L. L. May & Co.'s floral designer, is visiting her mother, Mrs. Magrie, of College Hill.

Mr. Johnston of Marschuetz & Co. was in the city Monday; it is with much regret we learn of the death of Mr. Joe Marschuetz of this firm. G.

A DESCRIPTIVE LIST OF CHRYSANTHEMUMS compiled by O. de Meulenaere, of Ghent, Belgium, has been recently received by us. It contains 99 pages, the names of the varieties being alphabetically arranged on a system similar to that found in the American Florist Co.'s Directory. The list appears a copious one, and the descriptions are very clear; it will be especially useful as an index to varieties of European origin. It is in the French language.

THE BALTIMORE CACTUS JOURNAL, the second issue of which has reached us, is a monthly periodical devoted entirely to the cactus family, published by the Baltimore Cactus Society. It is the only paper in the country devoted to the interests of this class, and should be appreciated by the many fanciers of these odd plants.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advs. not admitted under this head.

SITUATION WANTED—A No. 1 all round man; successful propagator. References. Address F W, care American Florist.

SITUATION WANTED—With rose grower, by German, 21 years old; 7 years' experience in greenhouse work. Address 2070 Seventh Ave., New York.

SITUATION WANTED—As a mail or express packer, by a single man; 4 years experience. Address C H 88, care American Florist, Chicago.

SITUATION WANTED—Young man wants position as assistant on private place. Understands his business. First-class references. Address T. CONNOR, Port Washington, L. I.

[Secretaries will confer a favor by supplying dates as soon as decided upon. We shall be glad to know of any further shows decided upon and not included in our list, even if exact date is not yet determined.]

Caution.

The man who has been attempting to pass forged checks on florists in various parts of the country has been heard of in Philadelphia and New York, and eastern florists should be on their guard. During the absence of the management of the FLORIST at the convention he secured the insertion of two advs. purporting to be from S. Mount & Co., of St. Louis, and stating they wished to buy chrysanthemums and palms. We learn that he has since made use of these advs. as a part of his scheme for passing forged checks. He would order plants on behalf of Mount & Co., tender a check to which he had attached their name, for a larger amount than the bill called for and try to get the excess in cash. Whoever he approaches in future should put the authorities on his track.

PLEASE mention the AMERICAN FLORIST every time you write to an advertiser.

Re Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

VISITED CHICAGO.—A. H. Goodwin, J. Comont, H. A. Johns.

IT IS EXPECTED that nasturtium seed will be scarce again this season.

VISITING NEW YORK: S. F. Willard of Wethersfield, and A. Crane of Florida.

A. H. GOODWIN of the Northrup, Braslan, Goodwin Co. has returned from Europe.

EUROPEAN contract orders for spinach seed are reported 50% short, but most of the foreign houses have plenty to sell.

MR. J. COMONT, representing Carter, Dunnett & Beale of London, is making his annual fall trip through the United States.

HENRY A. SALZER returned from Europe September 2. He does not consider the outlook for spring business of 1895 a favorable one.

MRS. J. R. FULLER of Floral Park, N. Y., sister of Mr. John Lewis Childs, died September 10 of pneumonia after an illness of less than a week's duration. Mr. Fuller has also been seriously ill for over five weeks and is hardly expected to live.

New Greenhouses.

QUEENS, N. Y.—Cottage Gardens, five new houses, short slope to south.

ONEIDA, N. Y.—J. M. Boden, West street.

STOCKBRIDGE, MASS.—John H. Choate, two new houses and extensive alterations; construction by Thos. W. Weathered's Sons.

FAIR HAVEN, CONN.—Smith Bradley, one house 80x20.

DUBOIS, PA.—C. E. Bostwick, two houses, each 100x20; one house 55x14.

YORK, PA.—Anthony Pike, two 100-foot houses on Linden avenue.

BETHEL, CONN.—George Beard, one 50-foot house on Center street.

ERIE, PA.—H. A. Neimeyer, three large houses.

YOU CAN'T AFFORD to do business without a copy of our trade directory and reference book.

SMILAX. SMILAX.

To relieve my over-crowded private greenhouse, a fine collection of Palms.

J. C. EASTON, La Crosse, Wis.

Effect of Electric Light on Plants.

ED. AM. FLORIST:—Is electric light injurious to roses planted in benches for winter blooming? A light has been placed near one of my houses, and I wonder what effect it will have on the plants.

T. K.

We referred the above inquiry to Prof. L. H. Bailey of Cornell University, Ithaca, N. Y., who has conducted a series of experiments as to the effect of electricity on vegetation, and he replies as follows:

"There have been no experiments made, so far as I know, to determine if the electric light is injurious to roses. We are projecting such an experiment the coming winter, and our roses are now upon the benches and the light will be put in soon. I have made a careful series of investigations upon the influence of electric light upon plants, the results of which are published in Bulletins Nos. 30, 42 and 55. We find that in general flowers are somewhat earlier under the light, somewhat brighter in color and often with longer stems. In every case the light should be surrounded by a glass globe or else it should hang above the greenhouse roof. From what I know of the behavior of other plants under the light, I should expect that roses would not be injured and that they might be benefited if an arc light were hung above the roof."

Worms Eating Canna Leaves.

ED. AM. FLORIST:—Referring to the note by Mr. F. R. Pierson, would say that we also have been troubled by worms and caterpillars similar to those mentioned by your South Carolina correspondent. These worms or caterpillars eat a hole the size of 1/4 to 1 1/2 inches through the leaf before it has unrolled. I have not been able to catch it or find any traces of it. The damage is done before the leaf has grown up enough to unfold.

PANSIES...

Every Grower Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Between Sept. 1st and Dec. 1st I will have a MILLION or more plants to sell. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. Liberal discount will be allowed on large orders.

An honest sample of the plants will be mailed you on receipt of ten cents, and terms are absolutely cash in advance.

ALBERT M. HERR, L. B. 496, Lancaster, Pa.
Mention American Florist.

Pansy Star Seed.

The JENNINGS STRAIN of high grade Pansy Seed. New crop now ready. Saved with special care from only the very finest varieties and warranted first-class in every respect.

THE JENNINGS XX STRAIN.

The cream of Pansies. Grand colors mixed, pkt., 1500 seed, \$1.00; 1 oz. \$3.00.

The Jennings Strain, finest mixed, pkt. \$1.00 about 2500 seed; 1 oz. \$6.00; 5 ozs. \$15.00. No skim milk in this strain. (They are just as good as I can make 'em). To my old patrons I would say they are a big improvement over last season—more variety and finer colors. The best strain for florists either for winter bloom or spring sales; all large flowering.

Finest Yellow, black eye..... pkt., 2500 seed, \$1.00
All my own growth of 1894. Half pkts. of any of the above 50c. Please send money orders or registered letter. Cash with order.

JAMES LAWRENCE, Groton, Mass.

Cleveland.

In our notes of August 9 stating that J. C. Gooding had brought suit against H. S. Gordon for wages due him we find we were misinformed. The facts are Mr. Gooding brought suit for the unexpired term of his contract, which contract Mr. Gordon claimed he was at liberty to cancel at any time as per clause contained therein.

There are some very good Daybreak carnations coming into the market now, cut from the new plants. Roses coming in from new stock are improving in quality every day and a week or two of cool weather will give us first-class flowers.

Wamelink Bros. are cutting some very good Beauties, but with short stems.

In summing up the value of business done the past summer we find instead of being exceptionally dull as some centers of trade report, that it has been an improvement on the past two years. True it is there has not been any calls for large amounts of flowers at one time, but there has been a greater number of small cash orders which tends finally to swell up a larger amount of business done in the end, and there are not many of us who object to the frequency of the small cash sales ranging from fifty cents to one dollar.

Looking through the greenhouses of J. M. Gasser everything is found to be coming along nicely and promising an abundance of bloom for the coming fall and winter campaign. Mr. Gasser has two separate establishments; one large range of houses on Lake avenue, at the city limits, devoted entirely to roses, and the other, located on Rocky River, five miles further west, for general stock, the two combined forming one of the largest if not the largest range of houses in the state, the whole devoted almost exclusively to the growing of cut flowers. There are sixteen houses at Lake avenue, ranging in size from 100 to 250 feet, with an average width of twenty feet. Solid beds are used, the foundation being common tiling running across the beds and placed side by side compactly the entire length of bed. On this is placed about six inches of soil. The roses are grown an average of three years, when they are renewed. The varieties grown are Bride, Bridesmaid, Beauty, Hybrids, Meteor, Wootton, Hoste, La France, Perle, Watteville, Cusin and Niphotos; Bridesmaid and Bride taking the lead in point of numbers.

There are fifteen large houses at Rocky River, four of them devoted to chrysanthemums and five to carnations. These are also grown in solid beds with tiling every foot, which affords sufficient drainage. L. F. D.

LITTLE'S ANTIPEST.

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the Scale, Woolly Aphis and Insect Pests of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is Safe, Sure and Cheap. No fruit grower or florist should be without it.

Send for Circulars and Price List.

Foreign Notes.

M. Latour-Marliac has produced another of his beautiful hybrid nymphæas, which he has named N. Robinsoni. It is rather larger than Laydekeri, rose, deepening toward the center. The rose color is finely spotted throughout with white.

A new and distinct disa, which has been flowered at Kew, is D. nervosa. The leaves are slender, narrow, and light green in color. It bears a raceme of delicate flowers, the peduncle crimson, the petals light pink, with a narrow line of deep rose down the center. The other parts of the flowers are white, lined with pink.

It is reported that the lily disease is troubling auratum very badly in England this year, and also speciosum in variety, many of the plants dying off wholesale. The disease appears to come on very suddenly, the plant appearing in perfect health one day and nearly dying the next. On investigation the bulb is found to be rotten.

Among plants recently receiving a first-class certificate from the Royal Horticultural Society was a new orchid hybrid, Lælio-Cattleya Broomfieldensis. The parents were Cattleya aurea var. x Lælia præstans. The sepals and petals are very broad, rosy purple in color. The influence of C. aurea is only seen in the labellum, which is an intense deep velvety crimson purple with deeper veins toward the base, the throat being veined with gold.

Begonia Rajah is a showy and distinct type recently exhibited in England. The leaves are kidney shaped, and are described as an intense brown, quite free from any tint of purple, veined with deep green.

A new adiantum, which it is said may be a hybrid from A. æmulum and A. fragrantissimum, is A. Hemsleyanum. It is somewhat like A. Williamsii, but is lighter and more graceful in shape, the foliage being light green and irregular in shape. Another new fern is Pteris biauurita argentea, which is not unlike P. argyrea, but with very firm leathery foliage. The color is deep green, with a silvery line through the pinnae.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

POUGHKEEPSIE, N. Y., June 4, 1894.

LOGKLAND LUMBER CO.

Gentlemen:—I must state frankly I never placed an order where every detail is so perfectly carried out as in the order I placed in your hands. Your lumber run just the same all the way through, and the quality cannot be bettered.

I have used up every foot of your sash bar; it was so good that we spliced the small cuttings and used in the valleys. I had a great many florists to see my new range, and they expressed it complete, and they had never seen better material or handsomer sash bars. In fact, it saves a great deal of time in carpenter labor, when the material is in such good shape. When I need any more I shall place my order with you. Any of my brother members of the Florist Society that want any information on your lumber I will cheerfully give it to them.

Yours respectfully, M. J. LYNCH.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SING SING, N. Y.—Herman Bradshaw is building four greenhouses, each 12x100.

YORK, PA.—Augustus Doll, who came here from Manchester, Pa., last spring has built five houses each 22x100, heated by steam.

WAYNESBORO, PA.—Henry Eichholz, formerly of Bellevue, Pa., has leased for a term of years the greenhouses built by the late J. F. Nitterhouse.

SAN FRANCISCO.—The premium list for the tenth semi-annual exhibition and chrysanthemum show of the California State Floral Society to be held November 15, 16 and 17, has been issued and copies may be had on application to the secretary of the committee of arrangements, Mrs. T. L. Walker, 2549 Piedmont avenue., Oakland, Cal.

Chrysanthemum Notes.

The crown buds are now making their appearance with a grand rush, and should be taken as fast as they appear, with the exception of some varieties which are universally known to produce better blooms from terminal than from crown buds, such as Harry E. Widener, Kioto and many others. We have often been asked to compile a list of varieties that should be grown to crown buds, and another list of those that should be allowed to grow to terminals, but that would hardly be possible. The same variety often grows entirely different with some growers from what it does with others, and where some excellent growers advise the taking of crown buds of a variety others equally as good stand ready to say that the terminal will produce a much better finished bloom, hence the publication of such a list might lead to a great deal of controversy, for location and mode of culture have very much to do with the selection of the bud. There is one thing, however, that our experience has led us to believe can be laid down for all to follow, and that is, if you want to retain the bright color in the reds and bright pinks they are far better grown to terminal buds, for the crown bud takes so long to develop that they will fade. The best way for a grower who has had but little experience with crown buds is to grow every variety to both crown and terminals and mark each plant with tag or in some other manner, and then when they bloom he will know which is the better bud for him to take in his locality and under his mode of culture.

It is time now to look up the liquid manuring, and if the plants were not mulched to begin light feeding, and as the buds begin to swell they will demand more and more. If it is the intention to use chemicals procure them now from as responsible parties as you can and get as pure an article as possible, for adulteration is practiced, and the chemicals themselves vary; the same article from different parties will often vary greatly, and sometimes damage will be done from using too strong a mixture. A word here as to their use. Be careful always that they hardly discolor the water and never use them on the principle that if a little does a little good more will accomplish a great benefit. Of the chemicals that are used

in chrysanthemum culture the following can be said: Nitrate of soda and nitrate of potash are both good cell openers and very stimulating, and will produce a strong growth with heavy foliage, but our experience so far has been that they are of very little use in building the bloom. Phosphoric acid is what is wanted for that purpose and the fertilizer that is richest in that ingredient and easiest applied is bone in its various forms. These two chemicals can be used to advantage from now to about the 15th of October; twice a week is often enough. A little dissolved bone can be used now in the liquid manure unless the ground was given a top dressing of bone. Many growers use this in their liquid manure and they say that very appreciable results have been obtained. Sulphate of ammonia is another chemical that is often used, and the effect of its application can be discerned very quickly, but great care must be taken to use a weak solution or the plants will be burned. This chemical is said to affect the color cells of the flower and foliage, which will brighten very quickly after the application. Again be careful of the reds and pinks, for this chemical will scorch the petals of these shades. Four ounces of nitrate of soda and nitrate of potash and two ounces of sulphate of ammonia to thirty gallons of water can be safely used. But animal manure will be found necessary to produce an A1 bloom. Cow manure will be the mainstay, but sheep manure makes an advisable change if it can be procured.

Inquiries are often made as to how to construct a cheap liquid manure tank. We have used one for some time that is very easily made which causes little trouble and the total cost is less than five dollars. Get an empty molasses hogshead and saw it in two; this can be bought at any grocery store for about a dollar. Place one half above the other on a staging, or what is better set one tub in the cellar and the other on the ground floor. Get from the wire worker two small pieces of wire netting, one 1/4 inch mesh and the other 1/2 inch mesh, about two and a half feet long and two feet wide. Make two frames to conform to the sides of the tub at about six and ten inches from the side and tack the wire netting to them. The frame to which the 1/2 inch netting is fastened will have to be strong enough to hold back the weight of the tubful of manure and some small strips will have to be nailed behind the front frame so as to keep it in position. This will leave fully three-fourths of the tub to be filled with whatever kind of manure may be desired, and by pouring the water into the back side of the tub it will soak through the manure and can be drawn by a faucet or siphoned into the lower tub. Here it can be diluted to the desired strength and whatever chemicals are used can be added. It can then be

pumped onto the benches or put on in watering pots. If the upper tub is set on the floor of the head house it will be found advisable to place a piece of zinc with turned edge under it, for when the tub is filled, unless carefully done, it is apt to overflow.
ELIJAH A. WOOD.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

If your plants are started it is time to get all the shading off the houses, as they will want all the sunlight they can get from now on to make a good growth for the Christmas crop. It may seem like a long time until Christmas, but it generally gets on us quicker than we anticipate, so it is well to take time by the forelock and prepare as soon as the plants are started.

Quite a large majority of the plants this season are not as large as usual and it will be well to give them a little liquid manure once a week to help them along, but be very careful not to keep the soil too wet, or the plants will get sickly and die off. Rust is bad enough, but a water sick carnation is a great deal worse; there seems to be no remedy for plants that have been overwatered.

Rust seems to have been pretty well conquered, for I have been to a number of places where they had rust pretty bad last season and have none now, but that is no reason why we should cease our vigilance; it is much easier to keep a lookout for it and destroy it at once than to allow it to get a hold and then fight it. There has unquestionably been a lot of unnecessary noise made over the rust, but we are better off without it, and as it is so easily kept in check we should all unite in destroying it.

Ventilation, syringing and fumigation should all be carefully attended to at this season of the year, and as soon as possible have the plants all neatly tied up and keep the soil stirred occasionally, especially if you are using manure water. It is also well to remember that carnations and weeds are not congenial neighbors, and the houses should be kept perfectly clean, not only clean of weeds, but all manner of rubbish. The plants seem to do better in a nice clean house.

If the plants have been brought in with buds on they will be filled with side buds, and very often these side buds dry up on the stem, so it is policy to go over the houses and disbud all of them; this gives one good flower without taking so much vigor from the plant. As a rule the first lot of bloom does not amount to much, but if the plants are disbudded they will compare favorably with the later crops. It is well to start in right, and especially for a beginner, or in sending to a new firm; if your first lot of flowers reaches them in good shape it will pay for a little extra trouble to get them good; first impressions count for much in making a deal for the season.

Plants that are out in the field yet will need some watching so that they are not caught by the frost, for while it does not seriously injure them it does hurt them to some extent, and they are better inside before it comes. Plants that are wanted for wintering over in cool frames for spring sales can be left out in the field until the ground begins to freeze slightly, and they will be all the better for it, but if they are wanted for flowers they should be housed now.
ALBERT M. HERR.

American Carnation Society.

Following is the schedule of premiums to be awarded at the carnation exhibition which will be held in conjunction with the meeting of the American Carnation Society at Boston, Mass., beginning the third Thursday in February, 1895 and continuing two or three days.

Class A.—Vases containing 100 blooms each as follows:

	1st.	2d.	3d.
White	\$10.00	\$7.00	\$5.00
Pink, (light) not to be darker than Wm. Scott	"	"	"
Pink, (dark) not to be lighter than Tidal Wave	"	"	"
Scarlet	"	"	"
Crimson	"	"	"
Yellow	"	"	"
Variegated	"	"	"

Class B.—Vases containing 50 blooms each as follows:

	1st.	2d.	3d.
White	\$5.00	\$4.00	\$3.00
Pink, (light) not to be darker than Wm. Scott	"	"	"
Pink, (dark) not to be lighter than Tidal Wave	"	"	"
Scarlet	"	"	"
Crimson	"	"	"
Yellow	"	"	"
Variegated	"	"	"

Class C.—Vases containing 12 blooms each as follows. First premium only, no second or third. \$2.00.

WHITE.

- Lizzie McGowan, Silver Spray,
- Mrs. Fisher, Puritan,
- Uncle John, Any other white.

PINK (LIGHT).

- Grace Wilder, Wm. Scott,
- Diaz Albertini, Edna Craig,
- Daybreak, Adelaide Kresken,
- Sweetbrier, Ada Byron,
- Nicholson, Annie Pixley,
- Any other light pink.

PINK (DARK).

- Tidal Wave, Richmond,
- Thomas Cartledge, Mrs. Hitt,
- Any other dark pink.

SCARLET.

- Portia, Stuart,
- Hector, E. G. Hill,
- Fred Dorner, Garfield,
- Any other scarlet.

CRIMSON.

- Jacqueminot, Anna Webb,
- Ferdinand Mangold, Creole,
- Wabash, Crimson Coronet,
- Pride of Kennett, Any other crimson.

VARIEGATED.

- J. J. Harrison, Helen Keller,
- Chester Pride, Americau Flag,
- Nellie Lewis, E. A. Wood,
- Stanley, Orange Blossom,
- Western Pride, Dr. Smart,
- Any other variegated.

YELLOW.

- Buttercup, Bouton d'Or,
- Goldfinch, Golden Triumph,
- Any other yellow.

Class D.—Pot plants, the pots not to exceed seven inches in diameter and one plant in a pot. First \$5.00; 2d. \$4.00.

White	Best six plants.
Pink (light)	"
Pink (dark)	"
Scarlet	"
Crimson	"
Variegated	"
Yellow	"

Twelve distinct varieties.—1st. \$10; 2d. \$8; 3d. \$6.
Twenty-five distinct varieties.—1st. \$20; 2d. \$15; 3d. \$10.

Certificates of merit will be awarded all new varieties of distinct merit.

A certificate will be awarded to the vase of carnations showing the best culture on exhibition.

Nitrate of Soda and Piping.

What is the proper proportion of nitrate of soda to water for a stimulant for forcing roses and how often applied?

I have a rose house heated by 5 runs of 4-inch pipe, open gravity system (Hitchings). Would it take double that amount of 2-inch pipe to heat the same house under pressure, say 10 lbs.? W. P.

In reply to the question as to what is the proper proportion of nitrate of soda to use for forcing roses would say that for young plants planted the current season at the present time I would not advise using more than at the rate of one lb. of nitrate of soda to fifty gallons of water and this applied not oftener than twice a month. For roses that have been carried over and need more stimulant if they are in strong active growth take at the rate of one and one-half lbs. to fifty gallons of water, and for all classes of plants after the first of March when the soil is well filled with active working roots this last proportion is about a fair amount, although in some varieties you may go as far as two lbs. to fifty gallons, but never exceed that as it does more harm than good to do so. This is an exceedingly strong fertilizer and if used too freely causes soft, incipient growth and will often fetch the leaves off in advance of the time of maturity, sometimes will even injure the young growth, but applied judiciously is certainly a valuable auxiliary as it supplies some of the food necessary for plant life in a very easy manner as it dissolves so readily in water.

The soil should be somewhat on the dry side before applying it, not enough to be dust dry but just in a free dry condition, so that it feels a little firm to the pressure, then at the proportion given above give a good liberal soaking. This is best done early in the morning so as to allow any surplus moisture to dry off before night and the ventilators should be opened as soon as possible so as to allow a free circulation of air through the house to modify any injurious effect it may have on the foliage on which it might fall.

In reference to the question regarding the rose house heated by five rows of 4-inch pipe open gravity system would say that under ordinary circumstances with a pressure of say ten pounds seven rows of 2-inch pipe ought to keep the house as warm as the five above, although it might be advisable to make it eight rows of 2-inch gas pipe; this would insure giving him an ample amount as above. The pipes could be run at the same grade as the cast iron pipes now in but should have air cocks at the end of the pipe, in other words, at the highest point, so as to let off any air that might collect there.

JOHN. N. MAY.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

MR. ALBERT M. HERR'S GREENHOUSES, LANCASTER, PA.

Miscellaneous Seasonable Hints.

Tulips will now be arriving and those that are wanted for very early forcing should be boxed at once. The success of early forcing depends on the quantity of roots they have. Without a good root growth it is impossible to obtain good flowers with any stem to them. I have given my idea of what a bulb box should be more than once in these columns, but whatever size they are let them be uniform in height, breadth and depth, and three inches is deep enough. A rich prepared compost is not at all necessary for tulips, hyacinths or narcissus. Any soil that will allow the water to pass freely through will do, soil that has been thrown out from carnation benches would be just the thing. Don't place the boxes on the ground, but put down a few old strips of boards to keep the bottom of the box an inch off the ground. When you are bringing the boxes in to force you will find the benefit of this. After the flats are placed out of doors, or rather where they are to remain until forced give them a most thorough watering; you cannot over do it. When the water has soaked in shake a very thin layer of straw, or what is just as good, the buckwheat husks in which the bulbs are packed. This thin layer of some such material is important, for it allows the soil covering the bulbs to break freely away from the surface of the soil in which the bulbs are planted. All that remains to be done now is to throw on three inches of soil. If the fall rains come along regularly no further watering is needed, but if we get a long dry spell in October and November which we sometimes do then the beds must have a good soaking every week or ten days. In this latitude it will be necessary when hard winter weather comes to further cover the beds with 4 or 5 inches of long straw manure or leaves. Hard freezing does not hurt hyacinths,

tulips or the hardy narcissus, but it is very inconvenient to get at them when frozen, and I have distinctly noticed in a flat of tulips that where one-half of the bulbs were frozen tight and the other end not that although the whole lot came along and threw up fine flowers those that had never been frozen were 5 or 6 days earlier to flower. Those I intended for the Easter crop I should cover less and prefer to have the frost go into the covering of earth a little, for it would keep the bulbs from getting too long necked. Some of the tulips, Joost Von Vondel, Keizer Kroon and Yellow Prince and some others will if kept too warm grow up a great length and when forced will flop over in every direction, which makes them unsalable.

The named Dutch hyacinths and the pans of tulips and narcissus I prefer to put in a frame which can be surrounded by some protecting material and can if necessary be covered with sash. If hard freezing gets in among the pots and pans you will have a large percentage of them broken. The frame in which you set them should have a good dry surface and one where water won't stand at any time. For several years latterly there has been a great increase in the demand for a potted plant at Christmas and Easter. People buy them for their own house, and thousands are bought for presents. You may say that at Easter the plant has completely knocked out the card once so popular. You want plants with a price to suit the small pocketbook as well as the large, and the great bulk of your sales will be from 25 cents to one dollar. Here is where the pots and pans of bulbs just fill the bill. The variety is very limited for Christmas, but you can have Romans and paper white narcissus then to perfection. The pans will outsell the pots wherever offered: an 8-inch pan with a dozen or fifteen well flowered tulips will please anyone, while an 8-inch pot of the

same would be an unwieldy object. The 6, 7 and 8-inch pans are the most useful.

Most of the large growers will have given their bulb orders long ago, but many smaller growers have yet to purchase the bulbs, and to them I submit a brief list of varieties that I have found to sell best as well as force best. The miniature hyacinth is excellent for growing in a 6 or 7-inch pan; makes a perfect little truss and is very cheap. In named hyacinths it is cheaper to buy the best bulbs; you will more than make up the few cents difference in the bulbs when they are sold. I buy the hyacinths in this proportion of colors: 2 white, 2 red and 1 blue; that's about as the popular taste goes. In narcissus there is nothing equal to the Von Sion. It is indispensable both for cut flowers and for pans. If you must have tulips at Christmas there is only the Duc Van Thol that can be had in flower at that time, and they are poor things. People are not looking for tulips so early and they sell poorly. By the middle of January you can have the standard sorts in flower; here is what I buy: For white La Reine and White Pottebakker; scarlet, Vermilion Brilliant and La Belle Alliance; yellow, Yellow Prince and Chrysolora; pink, Rose Grisdelin and Cottage Maid. If you want striped, Joost Von Vondel, a fine flower, and Keizer Kroon, a showy red and yellow flower. For March and April Murillo, a beautiful double white and Tournesol, red and yellow, are both fine. The above will be all the varieties that you will want, and don't grow too many for cut flowers. WM. SCOTT.

Worms on Cannas.

ED. AM. FLORIST:—I see that in the issue of September 1st Mr. J. M. Connelly of Charleston, S. C., speaks of worms attacking his cannas. The only ones we have here are the larvæ of two species of

Hesperia, commonly called "skippers" by entomologists. These are the only butterflies whose larvæ feed on the canna that I know anything about. The Hesperia are found over the U. S. in general, though we have a Mexican species which gives us a visit every fall. The larva is at first very small, but grows to about one inch and a half long before it turns to a pupa. They turn down a small bit of the edge of the leaf and hold it down by a silken thread while they eat, then turn down more, always concealing themselves under the part they are eating. They ruin the foliage of our cannas here every fall and I do not think anything does any good except hand picking.

Houston, Texas. W. W. WESTGATE.

Geraniums and Cannas in Washington Park, Chicago.

GERANIUMS.

Large quantities of geraniums are annually grown by the South Park system for the purpose of bedding. Washington Park and Drexel Boulevard are gay from early summer till late fall with brilliant color effects of these old favorites. Of the hundreds of different varieties introduced from time to time not every one is fit for park bedding. Many otherwise beautiful varieties are worthless as bedders for various reasons, some are weak and straggling growers, while others can not stand our bright and often scorching hot summers. In this latter class are included most of the fancy leaved varieties, which are to-day most conspicuous by their absence from park collections. As a matter of fact the fancy colored foliage of the plant is not considered at all in the general qualifications of the variety as a first-class bedder. The main points to consider are first, good constitution, second, habit, that is strong and compact in growth, with flower trusses borne well above the foliage; third, effective color when massed together in large beds, and last but not least it must be able to stand the test of our changeable climate and preserve all its good qualities from the beginning to the end of the season. Some few varieties here stood this test for years, while others grown successfully a year or two have soon dropped out. Many sorts have been superseded by more meritorious varieties while others had to be discarded on account of an impaired constitution.

Some 27,000 geraniums were used for bedding this year by the South Park system.

"We grow about 30 varieties," says Supt. Kanst in response to our query. "But only about one half of these are grown in quantity, the other half is kept more or less on trial. The present season," continues Mr. K., "has been just to the liking of the geraniums, clear and bright skies, high temperature, and no rain for months to spoil the bloom; in consequence the plants have done better than in any former years that I remember. The beds have been a sheet of bloom from early June until about two weeks ago, when heavy rains set in. Continued wet weather as you know is not to their liking, and at present the beds make but a poor showing."

"What new varieties are you trying this year, Mr. Kanst?"

"My trial for this year comprises Mr. E. G. Hill's new set of some twenty varieties, in all respects the most meritorious varieties that have ever come under my notice; there is no really poor one in the entire set. I will give you what I con-

sider the cream of the lot so far as can be judged by one season's trial, of the balance I wish to say nothing at present, all will be tried another season, and it is possible I may change my mind as to their individual merits or demerits. The following varieties, however, will be grown largely next season.

"Mme. A. de la Chevalier, white semi-double, the very best double white geranium I have yet seen, robust grower, of compact form, free bloomer, trusses borne free above foliage, flowers lasting. I think so well of this sort that the whole bed will be taken up for stock plants. Alpine Beauty, this also is a fine double white, and only inferior to the first named. In habit this variety is fully as good as the former, and also very floriferous, but the bloom does not keep as long in condition. Mrs. J. M. Gaar; this is a perfect gem for a single white, the bed was a perfect sheet of bloom all summer. First-class habit, medium tall, flower trusses of medium size set free above foliage, unsurpassed in every respect. Mrs. E. G. Hill, clear salmon pink shading to white at the base of the petals, single, an exceedingly strong grower, compact in form, flower trusses large and compact, petals of flowers broad, of firm texture and lasting. Very effective when massed, first-class all around. Beauty of Poitevine, salmon pink, even color, single but inclined to come semi-double occasionally. Much the same both in color and habit as the last named, short jointed grower and not quite as tall. The first part of the season I was inclined to give this variety the preference over Mrs. Hill, and after all there is but little difference between the two; it is about a toss up. Ben Schroeder, clear warm pink, single. This variety outranks any single pink I have yet grown; rather dwarf in habit and of remarkably even growth. Very free bloomer, flowers lasting and effective.

"Alfred Tennyson, single light scarlet, vigorous grower, good habit, trusses of good size, one of the best in this class. J. R. Lowell, single, of shade often termed brick red. A grand variety, very vigorous, rather tall, very free bloomer, trusses of large size, compact and lasting; recommend it very highly. Fred Kanst, single glowing scarlet. A fine variety but has some weak points on account of which I can not recommend it as a first-class bedder; it is a rather weak grower and although an enormously free bloomer doesn't wear very well. I think it would make a first-class pot plant though. Meteor, single, vivid scarlet, flower truss medium large, very floriferous and very effective in group. Habit good. W. A. Chalfant, single, bright scarlet, strong grower, good habit, flower trusses of enormous size, which, and more is the pity, are borne on rather weak stems, allowing them to droop. This is a serious defect and on that account this otherwise splendid variety can not be recommended as an effective bedder."

"Which of the older varieties do you deem of sufficient merit to retain on your list?"

"I think it is hard to beat S. A. Nutt for a semi-double dark scarlet. Leon Simon is another good scarlet I intend to grow for a while at least. Mme. Messenier I still consider a good pink and well worthy of a place. Bruant is a good scarlet, and old Gen. Grant holds his own.

"On the other hand I shall drop Master Christine, superseded by Ben Schroeder; Dr. Jacobi, superseded by Mrs. E. G. Hill and Beauty of Poitevine. Waddington is crowded out by better sorts, as also Gen. Sheridan and Clemence Boutard.

My old favorite double white Candidissima will have to make room for Mme. A. de la Chevalier. Ernest Lauth will have to go, for it has lost its constitution, and for the same reason I shall drop Sapeur Pompier."

CANNAS.

The cannas are yet in splendid form, though not quite as good as they appeared before the rain storms. A comparatively small number of varieties are grown. Mr. Kanst had ample opportunity for study of the great number of varieties exhibited at Jackson Park last season. His selection was therefore of such varieties as are best suited for park purposes. Following is the list, which needs no descriptions, as the sorts are all well known:

Florence Vaughan, J. D. Cabos, Egandale, J. C. Vaughan, Paul Marquant, Mme. Crozy, Alphonse Bouvier and Chas. Henderson. All the above are found satisfactory in every respect except the last, Chas. Henderson, which is only now coming into bloom, while all the rest have flowered freely all summer.

"This variety comes in bloom too late," says Mr. Kanst, "and for that reason I shall discard it. Alphonse Bouvier is of the same color and a much freer bloomer."

To make the set complete a good clear yellow is needed. Mr. Kanst has one that seems to fill the bill named George Nicholson, in honor of Mr. Nicholson of the Royal Botanical Gardens, Kew, England.

"Mr. Nicholson," says Mr. K., "while visiting this country last year honored us several times by inspecting our park and took quite a fancy to this canna, which was unnamed as yet. Being asked if he thought it worthy of bearing his name, he replied that he would be proud of it."

There are at present two beds of this canna in full bloom, and we failed to see a single flower that showed the least trace of orange red on the lip, although Mr. K. states that occasionally a flower is marked that way. To our mind it is the ideal yellow. In habit it much resembles Mme. Crozy, the same dwarf stocky growth. The flower is of good substance but the petals are not as broad as the standard type and this is its only weak point.

Another seedling which originated here is called South Park, a crimson with yellow throat, a very sturdy grower with flowers of medium size and firm texture, a fine variety says Mr. K. for exposed positions. It will stand the whipping winds better than any other sort. Still another good seedling is Stella Kanst, a clear apricot with yellow throat, quite effective in a group, medium tall and very free bloomer, flower stalks branching, green foliage.

Adiantum Cuneatum.

We present in this issue an engraving of a very handsome specimen of Adiantum cuneatum grown by Mr. E. S. Haskell of New Bedford, Mass., he having kindly sent us the photograph. The adiantum is in a 12-inch pot and the fronds have a spread of four feet and three inches. In response to a request for a description of the cultural methods which produced such excellent results, Mr. Haskell writes as follows: "It is impossible to write a lengthy article, for the method is too simple. There are a few rules that may be of benefit to some: 1st, never allow the adiantum to get dry; 2nd, never keep it standing in a saucer of water; 3d, never

SPECIMEN ADIANTUM CUNEATUM.

allow it to get pot bound; 4th, give plenty of liquid dressing; 5th, give partial shade and a temperature of about 75°."

How to Make and Care for a Lawn.

BY H. A. DREER.

[Read at Cemetery Superintendents' Convention, Philadelphia, September 11-13, 1894.]

We always base much importance on preparatory work, especially the lawn, hence the importance of the care taken in starting a new lawn. The formation of the lawn is often hastily and imperfectly done. Mode of preparing is often controlled by the position and location of the ground, also the season. Excellent results are obtained by preparing and seeding in September, south of northern New York, and from September 15 to October 15 south of Maryland; but in the majority of cases this work is done in early spring in every locality as soon as the frost has come out of the ground sufficiently to allow working, which should in all events be dry.

Any piece of ground to be put down in lawn, whatever condition it may be in, requires plowing, deep harrowing and equalizing; deep harrowing is very important where the soil should form into hard lumps after plowing. This method lifts out the clods, allows the fine soil to fill in the crevices which would otherwise fill after heavy rains when the seed is sown and lawn finished. The above will apply to any location of a slope, even slight, but should the location be flat and level, drainage is a requisite; this can be done even by rubble or tile. An undulation or a gravelly subsoil will alone insure sufficient drainage. The depth of soil is an undecided point. It is believed, and wisely too, that on high points and knolls the soil should have a depth of at least 12 to 15 inches to endure drouth, whereas on a level it will sustain its requirements at a depth of 8 inches.

During preparation the question of fertilizing is the next consideration. Should

the ground be in a fair condition, through previous fertilizers applied, a coating of pure ground bone (600 lbs. per acre) will suffice. We believe pure ground bone to be the best constant feeder—this to be applied at the time of seeding.

The ground having been plowed, harrowed, leveled and raked into a smooth, even surface, is now ready for the seed. The fertilizer having been applied and thoroughly incorporated prior to the finishing, the seed is sown at the rate of $3\frac{1}{2}$ to $4\frac{1}{2}$ bushels per acre (this means 20 lb. bushels); the sowing to be done by hand, all grasses thoroughly mixed before sowing. Should it be required to sow wheat, oats or rye with the grass, this should be sown at the rate of 1 bushel per acre broadcast, and harrowed in lightly, then the grass seed sown. It is not claimed for the wheat, rye or oats to protect the grass during the winter or shade it in summer, but to help in building the sod and keep the surface in a condition to absorb all of the nutriment of the decomposing fertilizer, as well as absorbing the nitrogen from the atmosphere. After the seed is sown a careful raking with a wooden hand rake lightly drawn over the surface evenly distributes the seed and lightly covers it. Now must be done the most important of all the work, and that is the rolling.

The condition of the surface at this time is just what it will be as a finished lawn; all alterations after this are tasks with poor results. If the lawn is sown in the fall, a covering of tobacco stems will prove a great benefit, especially if the soil has not had a coating of hard wood ashes, the tobacco stems will supply the amount of potash and ammonia, which will give the lawn new life. If sown in spring, a covering of well rotted manure finely sprinkled all over, about March 15, and allowed to remain a month will give the needed food and shading. In raking off the covering use a coarse wooden rake, thus allowing a fine mulch to remain.

What seed to sow: There are many confusing suggestions regarding this. Some advocate annual types, and seed each year; but it is conceded by all experts and authority that perennials of tried sorts are the best. Avoid all Canadian grasses; they are coarse and not very carefully harvested, but excellent for pasture.

In our Fairmount Park we have some of the finest plateaus of grasses which have endured drouths, and have been cut every week. These mixtures contain perennial rye, Kentucky blue, sweet vernal, extra cleaned red-top, natural green and white or Dutch clover. Italian rye is also frequently used, being a very free grower, somewhat coarser blade, but constant mowing keeps it in condition to present the appearance of a finer grass.

It is customary to use sod on all borders and on terraces. The sod should be laid at the borders so as to be about half an inch below the surface of the soil; this to be done before the seeding. After a thorough rolling the soil is brought to a level with the surface. The manner of laying sod is left to the judgment of the experienced. The bevel system having been practiced a long while is a good one, provided it is laid in fall or early spring; but after April 1 it is better to cut it square and thick, and lay very closely, fill the remaining crevices with good soil, and give a light sprinkling of grass seed; this will prevent burning the edges. Laying sod on steep terraces is successfully done by using pins eight to ten inches long (two to each piece of sod) and driving through; this will necessitate a thorough beating down of the soil before laying the sod hard enough to guard against washing and loosening.

Mowing should be done at least once a week in favorable growing weather, and even in dry, warm weather it should be cut twice a month. If the lawn has been properly made in the first place, and top dressed, the weather will have to be very dry to prevent its growth. The best mode of maintaining is the care given at proper times. In the fall it is necessary to give a good scarifying; this is done with a sharp-toothed rake made for that purpose. This operation is called cultivating. If the grass shows thin in some places another light sowing should be made, then cover with tobacco stems, if the space is not very extensive, or give a coat of kainit; this should be applied in December. The scarifying process may be done again in spring, but not very heavy, merely enough to give a good combing all over. If top dressing can be done, good rotted manure may be used, allowing to lay from March to May, and then raked off with a coarse rake.

Weeds are offensive and unsightly; cutting out of the large ones is sufficient, as the smaller ones are choked by constant mowing. This means perpetuating and caring for a lawn is open for improvement, also varies in different localities. Where fertilizers containing pure bone in majority can be secured at small expense it is advisable to use, and avoid manure from the stable because of its weed producing.

SUBSCRIBERS—Please note that the day for mailing the AMERICAN FLORIST has been changed from Thursday to Saturday, which enables us to give the news of each week complete, and that when mailed on the new schedule time it should reach subscribers within two days travel on Monday.

New York.

The heavy overstock of roses continues and with results naturally unpalatable to growers and wholesalers. The quantity of stock coming daily to this market may be imagined when it is stated that the receipts of one commission house reached the number of 34,300 roses in one day. Probably not more than 10 per cent. of the roses received at this season are used by the legitimate trade, the balance of 90 per cent being cared for by the street men. The outside price for good roses of the ordinary market varieties is \$3 per hundred, and when large quantities are disposed of the price does not run above \$6 per thousand. A movement is on foot among some of the Madison growers looking toward some combined action on the part of the growers to establish a market price on roses and forbidding their commission men to sell below the established figures. There have been several meetings at which the proceedings have been guarded with much secrecy. It is difficult to see how any benefits can be secured by any such action. The only practical way to raise and maintain the price on roses when there is an overstock is to destroy the overstock. Throw away three-fourths of all the roses now being cut and the balance will feel the benefit. But there is not the least probability of any such action.

Stock in general begins to improve in quality. Perles are particularly good at present. White carnations are scarce and sell readily at \$1 per hundred. White asters are also in demand. Some single violets are being received, but the quality is poor and they bring only from 15 to 25 cents per hundred. A very few double ones are coming in. Lily of the valley is fine, but sells slowly.

Thomas F. Carr, who has been in business for the past eighteen years on the corner of 35th street and Sixth avenue, died on September 11, aged 57 years. He has had hemorrhages several times during the past two years, and these finally carried him off. The store originally occupied by Mr. Carr on the corner opposite his recent location was at one time run by David Brooker. Carr and Charlie Carlin, who is now buyer for Thorley, were in the employ of Brooker, with whom they had formerly worked as employes of Walter Reid. By some means Carr got possession of Brooker's store, and the firm of Carr and Carlin was formed in 1876. The capital of the new firm consisted of \$100 in cash apiece, and they managed to clear a profit of \$4,000 apiece the first year, which was apparently more prosperity than they could stand, for they disagreed and separated, Carlin taking a store just vacated by Walter Reid on 34th street, which he kept for just two months, and Carr retaining the old stand. His main business was that of jobbing gardening and he made a great success of it, leaving considerable property, which by a peculiar provision in his will does not come into possession of his sons for some years yet.

The stock of palms and decorative plants offered on Tuesday, 18th inst., at the two auction rooms down town was of the finest possible quality, Rolker selling for New York growers and Elliott for Philadelphia growers. The buyers were few, however, and the prices obtained were ruinously low. It was essentially a buyers' day, and those who bought got big bargains. "You have it all your own way to-day; some of these days I'll have my turn" was the song which Elliott sang to them. Palms and rubbers suf-

fered most severely, and did not bring on an average more than one-half customary wholesale prices.

The now thoroughly advertised "scamp" was trying to work his game on the Herrmanns, Chas. Schwake and others in that vicinity a few days ago. He gave his name here as G. A. Thornton and represented that he was opening a new store in Brooklyn. His plan was to buy a bill of goods and offer in payment a check representing \$5 or \$10 more than the amount of the bill, but it is not apparent that he had any success in this neighborhood.

J. H. Dunlop of Toronto was in New York on Tuesday and Wednesday of this week, his mission being to attend the funeral of an uncle. Other visitors in town were Rob't Craig and W. K. Harris, who had come over from Philadelphia to look after their interests in the plant sales; and A. Whiting of Hartford, who got some of the bargains.

In last week's notes it was announced that the McFadden orchids would be sold by Wm. Elliott on September 18. This was not correct. The date should have been September 25. This will be a rare chance for cypripedium enthusiasts.

George Stumpp is fitting up an elegant store on the corner of 58th street and Fifth avenue, which he expects to open about December 1.

Chas. Schwake has added a department of imported metal wreaths and designs to his business.

All members of the New York Florists' Club wishing to join the Bowling Club are requested by Captain E. Leuly to meet at 7 East 22nd street, Monday, September 24 at 4 o'clock.

Boston.

A very gratifying revival in trade is reported by all the florists. The past week has shown quite an improvement in the demand which it is hoped will be permanent. The quality of the flowers coming in to the city averages rather inferior. Roses are badly covered with mildew in many cases, and asters are plainly getting down to the last run, while carnations are just between crops, neither the late ones from outside nor the early ones from inside being entitled to any medals for style or quality. Gladioluses, lilies and hydrangeas have all seen their best days for this season, their end having come sooner than usual on account of the parched condition of the ground and the high temperature.

Outdoor verdure begins to take on a decidedly autumnal appearance. Many trees and shrubs are shedding their leaves much earlier than customary and the indications are that the autumn coloring of the foliage will show but little brilliancy. In fact, many of the maples are already brown. Small shrubbery, especially such as are shallow rooted, are showing the effects of the extraordinary drouth in drooping leaves and stunted stems.

The fruit and vegetable show at Horticultural Hall on September 15 was excellent. The hall was beautified by many contributions of flowers, prominent among which were the hardy garden perennials and wild flowers. Yellow tints prevail just now, heleniums, silphiums, rudbeckias, helianthus, anthemis, coreopsis and solidagos all combining in a glory of orange and gold. The collection of these autumn beauties exhibited by the Harvard Botanic Garden was especially brilliant. Oakes Ames Jr. showed a plant of *Cypripedium Charlesworthi* in

bloom but was a week behind W. W. Lunt, who showed this grand acquisition here first at the exhibition of September 6 and was awarded a silver medal for it. A certificate of merit was given Mr. Ames.

H. A. Schroyer of Lancaster, Pa., visited Boston in the early part of the week. Unfortunately, or perhaps he may think fortunately, he did not notify us of his intentions, so the boys missed him, a fact much to be regretted for Mr. Harry deserves a cordial welcome wherever he goes.

Wm. E. Mansfield, senior member of the firm of Mansfield & Langer, died at his home in South Boston on September 15.

Edward Hatch will sell palms and rubbers for W. K. Harris on September 29.

Montreal.

The Montreal Horticultural Society and Fruit Growers Association of the Province of Quebec held their annual exhibition in the Victoria Skating Rink, opening on the 11th and closing on the 15th. A building more suitable for a flower show than the rink is hard to find, and when opened to the public Tuesday afternoon, presented truly a grand sight. The floor was laid out as a parterre; the beds, which were of various shapes and dimensions were surrounded with grass sod and filled in with sand, the walks being sawdust. Several hundred yards of asparagus was used in festooning, which with an abundance of bunting had a very pleasing effect. Although the quantity of good specimen plants may have been a little less than some former years the display as a whole has not been excelled by any previous effort of the society.

The principal objects of interest were the two groups of plants each covering an oval bed about 100 feet in area, Mr. Roy getting first and Mr. Betrix second prizes, after which came the four groups of 50 feet, exhibited by Messrs. Roy, Betrix, Walsh and Eddy. Those groups contained all that is choice and rare in the way of stove and greenhouse plants, and any one fortunate enough to have seen them before being grouped can certify that there were scores of perfect specimens, but unfortunately the prevailing style of building groups into a solid pyramid conceals the beauty of the plants and only allows the spectator to see enough of some plants to identify them. Limiting the number of plants to be used on a given space might bring about an improvement.

The competition in specimen palms was keen, there being a grand lot. For the five table plants in not over 6-inch pots there were almost a dozen entries. Mr. Wm. Wilshire had *Croton musiacus*, *Dracæna Lindenii*, *Dracæna terminalis*, *Ananassa sativa* var. and *Acanthophoenix cinnita*. Mr. Roy had *Ananassa sativa* var., *Cocos Weddelliana*, *Latania borbonica aurea*, *Codiaeum chelsoni*, *Adiantum gracillimum*. Mr. Meyer's plants were *Yucca aloifolia*, *Cordyline australis*, *Pandanus utilis*, *Pandanus Veitchii*, *Dracæna congesta*. Mr. Walsh's plants were *Dracæna terminalis*, *Tillandsia Innocenti*, *Ananassa sativa* var., *Dracæna Goldiana*, *Livistona altissima*. A large specimen of *Coccoloba pubescens* was shown by Mr. Roy, which received first prize for the best foliage plant. Mr. McHugh's tuberous begonias were perhaps the best ever shown here. The fuchsias exhibited by Mr. Holder were certainly the finest shown here for years, several of them standing five feet high and three feet through. Mr. Trussell's geraniums were grand as usual, among which were a few of his own seedlings which are fully equal to the best French varieties.

There was very little competition in made-up flowers. Mr. Davidson had a fine basket composed of Perle and Bridesmaid roses; one pyramidal bunch was noticed which recalled memories of a quarter of a century ago. The display of cut bloom was not large but of extra good quality, pansies and gladiolus being exceptionally fine. J. S. Cowles of Newport, R. I., showed a seedling canna of the Crozy type, it having a more yellow in it than the parent.

The attendance at the show has been good and the society congratulate themselves on having held an all round successful exhibition; of course there has been some dissatisfaction at some of the awards, but when was there an exhibition where there was not less or more?

Following is a list of the principal awards on plants and flowers:

Collection of plants, 100 square feet—Frank Roy, Mount Royal Cemetery Co., 1; Jules Betrix, gardener to Andrew Allen, 2.

Collection of plants 50 square feet—F. Roy, 1; J. Betrix, 2; John Walsh, gardener to W. W. Ogilvie, 3; John Eddy, gardener to Mrs. Redpath.

Adiantums—W. Wilshire, gardener to Mr. R. B. Angus, 1; F. Roy, 2; J. Betrix, 3.

Anthrums in bloom—F. Roy, 1; W. Wilshire, 2; J. Walsh, 3.

American aloes (2)—John Eddy, 1; C. A. Smith, gardener to T. A. Dawes, Lachine, 3.

American aloes, specimen—A. Pinoteau, Logan's park, 1.

Begonias, foliage—A. Pinoteau, 1; C. S. Smith, 2; H. W. Meyer, gardener to John Molson, 3.

Twelve begonias, tuberous—Thomas McHugh, Forest and Stream club, Dorval, 1; F. Roy, 2; Geo. Trussel, gardener to J. H. R. Molson, 3.

Six begonias, tuberous—F. Roy, 1; W. Wilshire, 2; A. Pinoteau, 3.

Six caladiums—J. Betrix, 2; H. W. Meyer, 3.

Six crotons—F. Roy, 1; W. Wilshire, 2.

One cycas—A. Pinoteau, 1; J. Betrix, 2; John Walsh, 3.

Four dracaenas—F. Roy, 1; W. Wilshire, 2; Geo. Copeland, Cote des Neiges, 3.

One dracaena—F. Roy, 1; Geo. Copeland, 2; John Walsh, 3.

Six ferns, tree ferns excluded—W. Wilshire, 1; F. Roy, 2; Geo. Copeland, 3.

Three do—F. Roy, 1; H. W. Meyer, 3.

One fern, specimen—F. Roy, 1; T. McHugh, 2; J. Betrix, 3.

One tree fern—J. Betrix, 1; J. Walsh, 2.

Six fuchsias—T. Holder, gardener to Mr. James A. Cantlie, 1.

Three fuchsias—T. Holder, 1.

One fuchsia—T. Holder.

Six zonal geraniums—George Trussell, 1; F. Roy, 2.

Six double geraniums—George Trussell, 1; F. Roy, 2.

Three tricolor and three bronze geraniums—George Trussell, 1; F. Roy, 3.

Ficus elastica—F. Roy, 1; George Trussell, 3.

Ficus elastica variegata—C. A. Smith, 2.

Hanging basket of plants—F. Roy, 1; A. Pinoteau, 2; P. A. Summerville, 3.

Hanging basket of ferns—C. A. Smith, 1; John Eddy, 2; A. Pinoteau, 3.

Lygodium scandens—Geo. Copeland, 1; John Walsh, 2.

One maranta—J. Wilshire, 1; F. Roy, 2.

Nepenthes, three—F. Roy, 3.

Nepenthes, one—F. Roy, 2.

Three orchids in bloom—F. Roy, 2; W. Wilshire, 3.

One orchid—F. Roy, 1; W. Wilshire, 2.

Six palms—W. Wilshire, 1; John Walsh, 2.

Three palms—W. Wilshire, 1; T. Holder, 2; F. Roy, 3.

Six palms, not larger than six inch pots—F. W. Mayer, 1; F. Roy, 2.

Specimen plant—H. W. Mayer, 1; John Walsh, 2; T. Holder, 3.

Vase plants—F. Roy, 1; George Trussell, 2; B. T. Graves, Cote St. Antoine, 3.

Five plants for table decoration—W. Wilshire, 1; F. Roy, 2; H. D. Mayer, 3; John Walsh, 4.

Six pairs of selaginella—George Copeland, 1; C. A. Smith, 2; F. Roy, 3.

Specimen green house plant in bloom—T. Holder, 1; F. Roy, 2.

Greenhouse foliage plants—W. Wilshire, 1; F. Roy, 2; H. W. Mayer, 3.

Greenhouse foliage plants—F. Roy, 1; H. W. Mayer, 3.

Three French cannas—F. Roy, 1; J. Betrix, 3.

One French canna—F. Roy, 3.

One greenhouse climbing plant in bloom—J. Walsh, 2; J. Betrix, 3.

Six coleus—George Trussell, 1; B. T. Graves, 2; F. Roy, 3.

Three coleus—George Trussell, 1; F. Scott, jr., 2; B. T. Graves, 3.

Chicago.

There is a little more life in the cut flower market this week. Society people are beginning to return from their annual migration to Europe, the sea board or other summer resorts. A number of retail houses are booking orders for October weddings, but nothing elaborate in the way of decorations is noted. Several weddings took place this week, which called for some fair sized decorations; these and a lively demand for funeral flowers has made white stuff of all kinds extremely scarce. It seems good to see the retail boys in their hustling clothes once more.

The call for light colored material was quite lively the middle of this week, and the market was cleaned out entirely in this line. White roses are short in supply, and with exception of Kaiserin, of poor quality. Brides are small and many of them more or less mildewed. Red roses, particularly Meteor, are good and plentiful, and so are Bridesmaid and Test-tout. First quality Beauties sell readily, but short to medium are slow. Carnations are improving every day; white is very short in supply. Daybreak is very abundant at present; this variety is being grown this season in enormous quantity and bids fair to flood the market. Very little outdoor stuff is coming in. Hydrangeas and asters are nearly gone, sweet peas have disappeared and dahlias are few and poor. Cattleyas are received once more, but find little demand as yet.

A new combination of growers has been formed under the firm name of The Rogers Park Floral Co. The firm is composed of the following members, all being located at Rogers Park, representing a total of 130,000 square feet of glass: A. Zender, J. Muno, H. Wieter and N. Wieter. This firm will handle their own stock exclusively and will be open for business Monday, Sept. 14, at 41 Wabash avenue, second floor.

Among recent visitors to the city were Mr. C. T. C. Deake of the Idlewild Floral Co., Asheville, N. C.; and Mr. Louis M. Noe of Madison, N. J.

Mrs. J. A. Merrifield, wife of J. A. Merrifield of 3425 Prairie avenue, was the victim of a shocking elevator accident at her home in the Beveridge flats on Tuesday last. Accounts of the origin of the accident differ, but the unfortunate lady was caught between the door and the elevator, and fell to the bottom of the shaft, a distance of forty feet, death being almost instantaneous. Mr. Merrifield has the sincere sympathy of a large circle in his bereavement.

Toronto.

The show of cut flowers and designs at the exhibition last week was fully up to the standard, the latter being perhaps ahead of former years in taste and general get up. The judging in this class was done by Mr. P. Breitmeyer of Detroit, at the suggestion of the Gardeners' and Florists' Association. Unfortunately when I was taking notes the names of the exhibitors had not been written on the prize cards and the judge had borrowed my pencil so that I must beg to be excused for any discrepancies.

French cannas, 20 spikes in one vase, a section put in for the first time, made a dazzling exhibit, the first prize being captured by the Steele, Briggs, Marcon Seed Co. There was also a splendid show of gladioli, some very fine varieties being shown by Mr. A. Gilchrist of Toronto Junction. Water lilies also made a fine and very attractive exhibit; there were

some immense blooms of Devoniensis, Zanzibarensis and others, but I must say that these big blooms look coarse and out of place away from their natural element and surroundings. Mr. Houston of the Central Prison, who took first prize, showed a bloom of Victoria Randii; Mr. Reeves, Reservoir Park, was second with a fine lot.

For the best collection of cut flowers in vases, not more than 50, there were two entries, Manton Bros. and Grainger Bros., and they made a most beautiful exhibit, both being very tastefully arranged. It appeared to be a toss up which was the best, but the judge decided that the latter firm was ahead on the point of greater variety. Harry Dale was first for collection of roses, 3 of each. Manton Bros. and A. Gilchrist made a splendid show with collections of hardy plants (cut blooms), the former taking first prize; the second prize went to what appeared to me a very ordinary lot, but no doubt the judge had good reasons for his judgment—I don't question it.

There was the usual show of asters, stocks, zinnias, dahlias, petunias, verbenas, dianthus, phlox, Drummondii and perennial, hollyhocks, sweet peas, etc., etc., all of which being better arranged than usual made the hall very bright. Of floral designs for table, funeral designs flat and otherwise, baskets, bouquets, there was no end. Mr. C. Arnold had a magnificent broken column of ivy leaves and white flowers which took first prize. Mr. C. Tidy had a simply lovely star on base most beautifully put up. Other exhibitors in this section were Manton Bros., J. Cotterill, F. G. Foster (Hamilton), Grainger Bros., W. J. Laing and others, and I regret exceedingly being unable to give descriptions of their exhibits and the prizes they took.

The number of people visiting the city during the exhibition was unprecedented, many gardeners and florists from outside cities and towns were among the number. The G. and F. Association should have a tent in society row next year to receive visiting brethren.

Before and during the first week of the exhibition Mr. Chambers had the grass and the flower beds in tip-top condition, but after the crowds of the second week it reminded one of the Wooded Island after the 4th of July or Chicago day.

E.

Philadelphia.

Heavy rains have at last relieved the severe drouth and will prove a great help to the growers in getting their stock from the open ground to the houses. Business is commencing to look up and new faces or old familiar ones are to be seen on the streets in increasing numbers. Growers, too, are looking up, the new crops are coming in and it goes against the grain to see the flowers going to waste when they might be turned into cash. As a consequence they are packed into boxes and baskets and lugged up one street and down another looking for that alchemistic touch that is to turn them into gold. This lugging business, this littering up a man's store with boxes and baskets, of not so much consequence now, is later on a great nuisance; when is it going to stop? We have hoped against hope for years but see little signs of a change.

Mr. Jos. Heacock, a large grower of Jenkintown, is getting tired of the old plan and after offering to go into any market scheme, in which he could control and handle his own flowers, without success, is to open soon a small market of

his own and has the prospect of getting a few growers to help him try the plan. This may be the starting point of a great market. We hope some good will result from it. There are also rumors of a movement among some of the principal growers to bring about a better method of handling flowers, a system somewhat on the Wisconsin Flower Exchange plan—but here the subject drops. Who is doing it, how is it to be done, whether there is any sand in the people back of it, whether it is simply a visionary scheme or not are all problems yet to be solved. It is said to be a thing of the near future and again it may be six months or perhaps a "coming next year" affair. Now boys don't be rash, don't do anything in a hurry, there are still a few cities that may want to start something of the kind, better wait and get a place, even if it is last.

W. K. Harris' place was visited by lightning during a recent storm; his largest house was struck, a center post was split down and a few of the boards at the end of the house forced off inside and out, but not a pane of glass was shattered.

Wm. Wyatt of 13th street has been improving and adding to his store; he has built a small greenhouse in the rear which will be of great use to him and also gives the store a very attractive appearance.

S. S. Pennock has returned from an extended trip through the New England States.

The sale of palms and foliage plants on Tuesday last at Rolker's, from Messrs. Harris, Craig, Lonsdale and Burton, was very satisfactory to the buyers, the growers according to their account were not in it.

Plants for the local trade have commenced to move a little, the stores are stocking up and some early weddings and banquets as well as "fall openings" have given the boys a chance to show their skill as decorators. All kinds of palms are to be had in quantity and the quality is most excellent. We feel safe in saying that the stock of this class of plants is larger, more varied and better grown this season than ever before. This stock should be moved before spring, and in order to do this all hands must not wait for too much profit. To make things move lively prices as well as plants must be inviting. K.

You CAN'T AFFORD to do business without a copy of our trade directory and reference book.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant advts. not admitted under this head.

SITUATION WANTED—Commercial or private; age 32, single, American; 8 years' experience. Good references. Near Chicago preferred. Lock Box 215, Oval City, Stark Co., O.

SITUATION WANTED—By thorough, first-class assistant; 7 years in commercial place growing roses, carnations and mums. Thoroughly reliable and trustworthy. ERNEST LEAB, Louisville, Ky.

SITUATION WANTED—By practical florist, age 24; 9 years' experience. Best of references. Please make me an offer at once. Address F. N. QUICKERT, 617 Reservoir Ave., Milwaukee, Wis.

SITUATION WANTED—By young man, age 26, German, can speak English; experienced in growing roses, carnations, and general stock. Also a good propagator. Address BERNHARD SCHELLEIT, care A. Barbe, Kansas City, Mo.

SITUATION WANTED—As manager, foreman or assistant in Southern N. E.; 12 years' experience in retail end flower and plant trade. Can do own repairs, piping, etc. No liquor. E. A. CHIPMAN, Woodsocket, R. I.

SITUATION WANTED—By successful grower of cut flowers and plants; good propagator and despatcher. Competent to take full charge; 17 years' experience; German, married; age 35. Good recommendations. PROPAGATOR, care American Florist.

SITUATION WANTED—By young man of 21, as shipping clerk, salesman or decorator in flower or seed store. Experienced in packing of flowers and plants. Best of references. Address EXPERIENCE, care American Florist.

SITUATION WANTED—By gardener, landscaper and florist; English; 10 years' experience; best habits and references. Want place in Illa. or Wis. \$20, board, lodging and washing required. Address RICHARD THOMAS, Box 412, Neoga, Ill.

SITUATION WANTED—By thorough, first-class assistant; 5 years in commercial place. Can take charge of 15,000 feet of glass (retail cut flower trade). Those in want of a reliable man address GROWER, care American Florist, Chicago.

SITUATION WANTED—As assistant by young American, single; used to first-class retail trade; store or greenhouse work; can take charge; practical, reliable worker; good salesman; abstainer. Good references. Address E P P, care Am. Florist.

SITUATION WANTED—After Oct. 15th, as foreman on commercial place of 25,000 or more feet of glass, where roses are made a specialty. References: N. F. McCarthy, 1 Music Hall Place, Boston; or A. Montgomery, care E. M. Wood & Co., Natick, Mass. M, care American Florist, Chicago.

WANTED—For Ohio, a young experienced florist for general greenhouse work. State wages and references. L, care American Florist.

WANTED—80 second-hand hotbed sash 6x3, three lights. Also 600 feet of 2-inch iron piping. Send estimates to JAMES LAWRENCE, Groton, Mass.

WANTED—For San Francisco, a competent man for a private place; must be fully capable to attend to orchids and exotic plants. State references and wages. Address Z, care American Florist.

WANTED—Florist and gardener, a good willing worker that understands taking care of an orchard and can attend to small greenhouse. Wages dependent on capability. For particulars inquire H. A. ALDRICH, Neoga, Ill.

WANTED—Man to care for lawn, garden, flowers, horse and cow, and make himself generally useful. Wages \$25.00 per month. All applicants please give age, experience, nationality and references. G. E. DILLEY, Palestine, Texas.

WANTED—A good working, single man, as assistant. A good grower of roses and carnations; one who does not use liquor, tobacco or swear. Send references and state wages. Address IOWA, care American Florist, Chicago.

WANTED—A good working foreman, to take charge of greenhouses; must be experienced in propagating as well as forcing roses and carnations; also forcing bulbs. Must be single. Address MRS. GEO. R. FRAVELL, 322 S. Washington St., Marion, Ind.

WANTED—Young man of 20, with greenhouse or seed experience; must write good hand, have intelligence, work and ambition. Have opportunity to grow into good position in seed business. Address with particulars and references. HORTICULTURE, care American Florist.

FOR SALE CHEAP—One water-buck. Address LEWIS TURNER, Kenosha, Wis.

FOR SALE CHEAP—Large second-hand florist's Ice Box, value about \$75. VAUGHAN'S SEED STORE, 88 State Street, Chicago.

FOR SALE CHEAP—Large, new hard wood and glass florist's Refrigerator. Used at World's Fair. Price reduced to \$175. VAUGHAN'S SEED STORE, 146 & 148 West Washington St., Chicago.

FOR SALE OR RENT—Greenhouses, either 15,000 or 30,000 square feet of glass, stocked with best variety of roses. Or will take partner with \$1,000 capital. Address A. T. JACKSON, station X, Chicago.

FOR SALE—Stock, goodwill and fixtures of established florist business in thickly populated portion of Philadelphia, on a good business street; trolley cars pass the doors. Attached to store are three greenhouses containing 100 feet of glass. A very showy place. Low rent. Will sell low to quick buyer. Address ARTHUR MALLOX, JR., 2432 Ridge Ave., Phila., Pa.

FOR SALE—Greenhouses, plants, hotbeds, water-works and fixtures, in live university town of 4000. Good paying retail business, flowers, vegetable plants and vegetables. Established 10 years. Near college and depot; 2 acres land, good house and barn; good climate. \$1,200; easy terms. Only greenhouses here. Good reasons. Will assist purchaser in marketing. ARCHIAS SEED STORE, Fayetteville, Wash. Co., Ark.

FOR SALE OR LEASE—Florist business in one of the finest cities and health resorts in Colorado; 5 greenhouses, each 75 by 20 feet, also dwelling; all heated with steam, and well stocked with roses carnations, mums and violets. Trade wholesale and retail. Will sell stock and give long lease on the place, or will sell the whole place on easy terms. Reason for selling poor health. Address VICTOR JOHNSON, box 884, Colorado Springs, Colo.

FOR SALE Well established florist business, 1200 square feet of glass filled with fine and rare stock ready for the fall and winter trade, 8000 pots, etc., etc. **For \$500.** Will be sold at once. It is given away almost for nothing. For particulars address NEBRASKA, care Am. Florist.

NOTICE. I have bought the Floral Park Greenhouses formerly owned by Victor Johnson & Co., and will connect this business with my Broadway Floral Conservatory. Wanted wholesale catalogues in any style, send to Block G, West Abriendo Ave., G. Fleischer, prop. I would like to engage Otto Blunder in my florist business; can somebody give me his address? G. FLEISCHER, Pueblo, Colorado.

TO WHOM IT MAY CONCERN: The firm of UHLMANN & HAISCH, of Memphis, Tenn., has been dissolved by mutual consent, and is succeeded by E. UHLMANN, who will carry on the business of florist in all its branches, and who will endeavor to maintain the enviable reputation gained by the late firm for high artistic work, and for elegance and promptness in the execution of all orders.

FOR SALE. Six (6) greenhouses, two hot water boilers, about 2000 feet 2-inch wrought iron pipe, valves, etc., lot of hotbed sash, frames, benches and about 35,000 flower pots. The entire plant will be sold at a very low cash price, as the whole must be removed off the premises before Sept. 1st. For particulars address L. R. MUNN, Station C, Brooklyn, N. Y.

PITCHER & MANDA.

Special inducements are now being offered in plants of very high quality, at the lowest prices ever known. Such an opportunity to secure bargains in Orchids, Palms, Ferns, Azaleas, Genistas, Ficus, Stove and Greenhouse Foliage and Flowering Plants, Herbaceous Plants and Bulbs seldom occurs.

Write us your requirements and we will furnish estimate of cost.

100,000 PANSIES BROWN'S SUPERB PANSIES

READY NOW FOR PLANTING.

Grower of all the leading variety, the ne plus ultra in pansies. For size and form it seems hardly possible to produce anything more perfect and superfine (most light colors).

By mail, 75c. per 100; Liberal discount will be allowed on large orders.
Free by express, \$5.00 per 1000. Cash with order.

PETER BROWN, 721 Marietta Avenue, LANCASTER, Pa.

PANSIES...

Every Florist Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Have any quantity of fine plants ready now. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. A Liberal discount will be allowed on large orders.

OBITUARY.

Mrs. M. A. HUNT, widow of the late treasurer of the Society of American Florists died at her home in Terre Haute, Ind., Monday morning, September 10. She had been failing for some time and the Thursday preceding her death was found in an unconscious condition from which she never revived. The funeral was held on Tuesday, September 11, and the remains, together with those of Mr. Hunt, were taken east, to be interred at Sunderland, Mass.

ADVERTISERS—Please note that the day for mailing the AMERICAN FLORIST has been changed from Thursday to Saturday and that advs. may now reach us as late as Thursday morning and secure insertion in the issue of the same week.

WAYNE, PA.—The Wayne Horticultural Society will hold its fall exhibition October 30 and 31. Copies of the premium list may be had by addressing the superintendent of the exhibition, Mr. John G. Gardner, Villa Nova, Pa.

FREDERICK CITY, MD.—The Frederick County Floricultural Society has issued the premium list for its fourth annual chrysanthemum show, to be held next November. Copies may be had by addressing the secretary, Mr. C. E. Kemp, Frederick City, Md.

PEABODY, MASS.—It will be a relief to the many friends of Mr. J. M. Ward to learn that the report of his recent death was false, although it appeared in one of the Boston daily papers. Mr. Ward is very much alive, and is to be congratulated as one of the few privileged to read their own obituaries.

ALTOONA, PA.—The assistant superintendent of the Pennsylvania Railroad Landscape Department, Mr. H. Hansen, formerly head gardener of Indiana Soldiers' and Sailors' Orphans' home at Knightstown, Ind., was married on the 5th of September to Miss Fanny Engherg of Philadelphia, Pa. At present he is on a wedding tour by the seashore. He will reside here.

VINE SEED reports are more favorable.

AMERICAN WONDER peas are expected to be as scarce as last year.

THE Michigan bean crop in the eastern section is turning out better than was first anticipated.

THE *Market Gardener and Trucker* is the name of a new monthly journal to be published October 1 in Minneapolis.

NEW YORK.—The bulb trade is looking up. Retail and wholesale orders are coming in with gratifying rapidity and a healthy condition is noted generally.

THE FALL retail trade in bulbs is reported generally to be fairly good with hopes for improvement when settled cooler weather sets in and frosts make way with the summer flower beds.

Worcester, Mass.

That trade is improving slightly is beyond a doubt, but the change goes on so slowly that it is hardly noticeable; everything is plentiful, with the possible exception of good carnations, so plentiful in fact that most of it goes into the dump. The condition of business as a whole is not very encouraging.

The horticultural exhibition on the 13th was very successful and drew a large attendance, the quality of the exhibits in general was very satisfactory and the competition keen enough to make it interesting. The winners of first and second premiums were as follows: Cut flowers, twenty vases, distinct varieties, H. B. Watts, first, F. A. Blake, second; gladiolus display, H. B. Watts, first, F. A. Blake, second; pansy stand, Ed. Hall, first, F. A. Blake, second; dahlia, single, twenty vases, J. A. Abbott, first, A. A. Hixon, second; geranium display, no duplicates, F. A. Blake, first, A. A. Hixon second. Four premiums were awarded in each class and a number of good exhibits not called for by the schedule were awarded gratuities.

SEEDLING.

Vaughan's Seed Store, Box 688, Chicago.

Cincinnati.

Mr. R. H. Warder, superintendent of our parks, deserves credit for the handsome beds of cannas and a bed of salvia that may be seen from the Walnut Hills cable at Elsinore entrance. Mr. Warder is the first park superintendent who has accomplished much in the way of beautifying the parks of Cincinnati. Thousands of people each year attend the band concerts held in Burnet Woods and Eden Park and many complimentary remarks can be heard on all sides regarding the flowers. The Lockland Lumber Co. is now erecting in Eden Park, three greenhouses 100x20 for the use of the parks; this is only a starter and we trust it will only be a short time before we will see a large range of glass, and see all of our parks as handsome as those of Chicago and St. Louis. The larger portion of the money appropriated for park purposes in Cincinnati has been spent in constructing sewers and underdraining. Now that is done, and we trust a larger amount will be devoted to flowers and shrubbery, thereby cultivating the taste of the people for them. Superintendent Warder will plant several large beds of tulips and hyacinths this fall.

Business is still picking up and as the rain has been quite generous of late, thus supplying our florists who have been hauling water, we shall expect to see stocks getting better also. Our carnationists can now lift their plants.

Robt. J. Murphy, who has nine large houses, tells me he will build another this fall, as he is crowded for room. Wm. Murphy is doing likewise.

Fred. J. Lodder of Hamilton, O., has leased the Oakley Rose Houses, formerly managed by Chas. S. Mitchell and will run same for the next two years. He will grow vegetables principally and some flowers.

S. L. Galloway of Terrace Park, O., who has been sick for the last nine months was able to come to the city last week. Mr. Galloway has been in the florist and nursery business for the last 25 years and grows a general stock which he sells to the retail stores.

Wm. Jones of Newport, Ky., has given up the florist business and gone back to his old trade, watch making. C. J. Jones, Jr., will now manage the business.

Chas. Witterstaetter, brother of "Dick," died on the 13th inst. of a complication of diseases. Mr. W. was more of a vegetable than a flower grower; he leaves a wife and several children.

John and Wm. Hartje of Indianapolis are in the city, called here by the death of their mother. G.

 GEO. HANCOCK & SON, Grand Haven, Mich.

Buffalo.

The last meeting of our club was held in the spacious wholesale warehouse of D. B. Long. The meeting was well attended, for there were matters of considerable interest to bring up. The contingent of stay-at-homes wanted to hear all about the convention, and all of those who were lucky enough to have been at Atlantic City were quite willing to give them a lengthy account. On a sideboard was a display of trophies, corkscrew and all, a very visible evidence that someone had been on a visit. The team who won the prizes handed them over to the president of the club, who in turn placed them with the treasurer of the club for safe keeping, with instructions to have them insured for their full value. There is little fear but what Buffalo will turn out very strong at Pittsburg. It's early yet to talk about it, but there are already signs that the delegation will be a large one.

Mr. S. A. Anderson read a very interesting paper on "Our summer trade." The advice it contained was most excellent, but as it was getting late no discussion occurred.

Our patrons are coming home from the seaside and mountains, and there is a decided pick-up in business. Roses, except Meteor and Beauties, are hardly up to the right quality yet. Carnations are of course quite scarce now, but soon there will be any amount. There is an enormous quantity of Daybreak planted in this neighborhood; hope it won't be overdone. What with two months' drouth and grasshoppers, carnations are nothing like the quality they were a year ago. Wm. Scott and Portia seem to have stood the long dry spell fairly well, while Lizzie McGowan is very small. Since the dry time broke up we have had frequent and copious rains, and changed the surface of parks and cemeteries from a burnt up brown to a refreshing green.

I have not visited the large establishment of W. J. Palmer & Son for some time, but I am told on the best authority that his rose houses are magnificent; a house of Meteors is so large, grand and productive that it is with difficulty that W. J. P. senior can be persuaded to leave it even for his meals.

Since the convention we have had Mr. Walter Mott and Mr. J. S. Taplin of New York with us. W. S.

THE KINNEY PUMP.

THE KINNEY PUMP.

Every florist, market gardener, owner of lawn, grass-plot or flower-bed, in fact everyone who has a faucet and hose should have the Kinney Pump (patent applied for) for applying liquid manure, fungicides and insecticides to plants. Feed your plants, fertilize your lawns by using liquid manure. The cheapest, simplest and most scientific spraying pump in use. Sent prepaid for \$2.50—spraying valve attachment 50c. Pump complete \$3.00. Send for circular. Address

TO TAKE PLACE OF WIND MILLS

HOT AIR PUMPING ENGINES

A Windmill

Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR DE LAMATER-ERICSSON Hot-Air

Pumping Engines

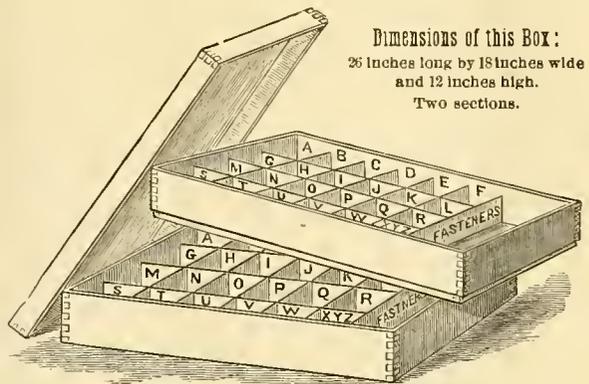

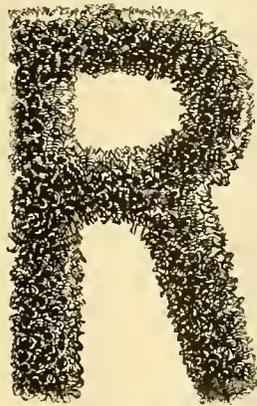

are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to THE DE LAMATER IRON WORKS, 87 South Fifth Av., NEW YORK, N. Y.

Galt, Ont.

The Horticultural Society's show was held here on the 5th and 6th inst. There was a large increase in the number of entries over previous years, more than 600 being made. Nearly all the prizes offered were taken. The new scheme of giving plants to school children to grow for exhibition was not altogether a success, although some of the plants showed that they had been well attended to. The scheme failed to bring the expected crowds and the hoped for balance was on the wrong side of the sheet. Messrs. Brooks of Fergus, Townsend of Hamilton and Gilchrist of Guelph, acted as judges to the satisfaction of all. There being no florists' club here the boys all make a point of meeting at this annual show and there was a general good time among them.

At the meeting of the society last Thursday there was a lively time, every one being in good humor, especially D. Allan, Brown and McGeorge. A still small voice whispered something about a chrysanthemum show, there is only the whisper at present but the stuff is here in abundance to make a good show.

Alex Comons is putting up another house 30x60 feet, a good sign that his trade is increasing.

A. Walker of the Royal Bulb Co., has changed his mind and taken a situation as drummer in another line of business.

Trade dull, weather June like, rain came late but was welcomed by all. MAC.

Topeka, Kans.

The florists of this city held a meeting on the evening of September 10, at which time the Society of Topeka Florists was formed for mutual benefit, social privileges and better maintenance of prices for our products. Mr. Keith of T. E. Keith & Co. (the oldest florist in the business in this city) was elected president and W. L. Bates of the Bates Floral Co. was elected secretary. It was decided to hold a meeting on the first Monday of each month through the winter for the purpose of considering such business as may come before it. W. L. BATES, Sec'y.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

MOUNT KISCO, N. Y.—O. V. Rodin is starting a new florist business here. He has built two houses, one 20x100 for cut flowers and bedding plants and one 11x100 for violets.

SPRINGFIELD, ILL.—Messrs. Brown & Canfield had an "opening" at their handsome new store at 209 South 5th street, September 15. A rose or carnation was presented to each caller during the day.

WE HAVE received a copy of the first issue of *Young's Magazine*, a new monthly periodical "devoted to flowers, vegetables and the household," published by W. G. Young at Latrobe, Pa.

THE illustration of *Aristolochia gigas Sturtevantii* that appeared in our issue of September 15 was engraved from a photograph taken by Mrs. Fanny Copley Seavey.

Chrysanthemum Notes.

The chrysanthemum grower who intends to have a fine lot of bloom now has his hands full of work, and there is hardly time enough in the day to suit him, for the buds are setting rapidly and should be taken as soon as possible. Don't for an instant think that when the shoots are removed from around the crown bud or the small buds that set around the terminal are rubbed out that you are through with that plant, for all the eyes in the axils of the leaves the entire length of the shoot will immediately open and put forth new shoots, and these should be removed as soon as they appear. Look all the plants over every day and rub these shoots out. Keep the plants well tied up at the top, for as the buds begin to grow larger they grow heavier and will tend to lean over and grow crooked, so as soon as the flower stalk has grown long enough to tie to the stake do so and cut the stake off just below the bud, so that it will not interfere with the flower when it begins to develop. If any of the plants have grown so tall that they look as though the blooms would touch the glass when they get in flower bend the stake over slightly where there will be more headway, but no more than seems necessary, for this will make the stem crooked.

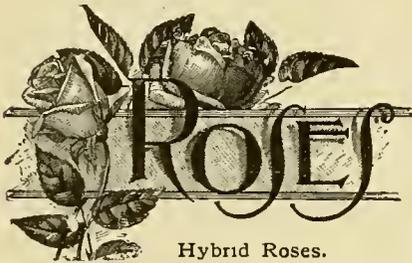

Begin now to feed regularly with liquid manure and continue until the flowers begin to unfold, and if the plants are in fine condition and are taking up the moisture in the soil, three times a week is none too much, and the manure water can be made much stronger. As soon as the manure water begins to grow weaker make up some new, for the season is beginning to get short and a weak liquid after having given them a strong is hardly any better than pure water. It has been our custom to apply liquid manure water to the plants every opportunity that we could, and we would change the liquid, using cow, sheep and then hen manure, and once a week a little nitrate of soda or nitrate of potash. On some of the varieties a few of the lower leaves may become brown or withered, and these should be removed when found. Keep the top of the bench clean of all foliage that may drop or get broken off, and of all weeds. If suckers grow up

at the base of the plant they should be carefully removed; pull them out if it can be done without injury to the roots of the plant, and if not, cut them off just below the surface of the ground.

The Chrysanthemum Society of America adopted at its meeting at Atlantic City what was considered by those present to be the most practicable way of judging seedlings and awarding certificates. In our issue of September 1 Mr. T. D. Hatfield presents a plan which is commented upon in a later issue by Mr. E. G. Hill, and the latter gentleman states that the plan adopted by the society "does not meet the requirements of the case." No one doubts that the plan presented by Mr. Hatfield, that is, to have a committee of three or five experts meet at some central point three times during the season and examine seedlings, is by far the best way to accomplish this somewhat difficult task, but there are three objections that are of great importance and that looked insurmountable to the members of the society present at that meeting. The first is to procure three or five men who are well enough posted to judge the seedlings who can afford to give the time necessary for this purpose. Nearly all of the chrysanthemum authorities are growers themselves, and at the dates at which they would have to meet are too busy with their own plants to give the time it would take to attend the meetings or to travel to reach the city where they would be held, for at the present time it would hardly be possible to find just the men wanted in any one locality. Second, the expense. It seems rather hard to look at this matter from this point of view, but nevertheless it must be looked square in the face. To get five judges in whom the growers of this country have full confidence to any central city three times inside of four weeks or to board them for that period means quite a little outlay, and if the men could be procured that would give their time we hardly believe that either Mr. Hatfield or Mr. Hill would expect them to pay their own expenses. Now the finances of the Chrysanthemum Society will not warrant this outlay, so where are the necessary funds coming from? We remember hearing a gentleman once say that he thought that the disseminators of the country would be willing to bear this expense, but even if they were, and we very much doubt that they would be, it would place the committee in a very uncomfortable position, for if they happened to award a certificate to a variety that afterward proved valueless, and they might, for no one is infallible, the cry would immediately go up that undue influence had been exerted by the disseminator of that variety, and their good name would be tarnished. The third objection is of minor importance really, and that is of getting the flowers in good con-

dition to any one city from the different parts of the country, and the necessary expense. Chrysanthemums are now raised from seed from the east to the far west, and to have them judged at any one place means a long journey for some of them, and they are apt to arrive in very poor condition after two or three days' travel. Now no committee appointed for this purpose should award a certificate on what they thought would be the capabilities of a flower which was presented before them in poor condition, but would have to judge them as they came before them. So taking the matter all in all and looking at every side of the question, we think the plan of judging in the different cities by competent men, where the flowers can be presented in a creditable shape and at scarcely any expense, the best that can be done for the present.

ELIJAH A. WOOD.

Hybrid Roses.

These should now have extra care, especially where it is desired to have them for early blooming; the heavy rains we have been having will make this imperative, as it is very hard to get them ripened when there is a large amount of rainfall, at least where they are being grown in the open air, and with many growers this is practically the only means at command for this stock. If they can be well rested it will undoubtedly give the best results, and where such is the method followed every precaution should now be taken to keep heavy rains from soaking the soil by laying the pots or boxes on their sides when indications are for rain. Should hot, dry weather follow they should be placed upright to avoid the roots getting over dried, as the plants are sure to suffer and the flower crop also when the least indication of shriveling of the wood occurs. To avoid this we have found that when the plants are getting the least over-dry a light syringing, or rather hosing with a fine rose mornings and evenings will keep the wood plump and solid for two or three weeks at a time without watering at the roots, thus getting the plants well rested and the wood thoroughly well ripened, which is the desideratum for early forcing, and will generally take from five to seven weeks, according to the condition of the weather. As soon as the wood becomes well rested, which will best be known by the plants ceasing to produce young growths, and the lower leaves assuming a pale green, though they ought to be still fresh enough to adhere to the wood, such varieties as Magna Charta, Mrs. John Laing and Ulrich Brunner are in a good condition to prune, which can be done at any time. In doing this thin out all the thin, spray-like shoots and shorten the strong ones back to where the wood is quite solid and the eyes plump.

As soon as this is done give the soil a good soaking of water, and a day or so after scrape off as much of the old soil as can be removed without injuring the roots, then replace it, filling the pots or boxes nearly full with fresh loam and well decomposed manure in about equal por-

portions. Should the weather continue mild they may be allowed to stand outdoors for a week or two longer, keeping them well syringed overhead and the roots moist; the eyes will swell very fast, and the heavy dews at night which we generally get at this season of the year will greatly aid the rapid development. But should cold weather set in lose no time in getting the plants into the greenhouse, as any check whatever after they have begun to move will be very detrimental to their future success. As soon as placed in the greenhouse they should be syringed overhead at least twice each day in fine bright weather, and sufficient water given at the roots to induce free root action. Night temperatures should be maintained at from 48° to 50° for the first three or four weeks, or till the plants get into active growth, after that gradually increase the temperature till the buds are well set, when it should be kept at 56°, and if really fine flowers are the desideratum it should never exceed this point. Give all the air reasonable on all favorable days, starting to ventilate at 62° to 64° in the morning, increasing as the temperature rises, but with plenty of air on the temperature may be allowed to run up to 75° in the middle of the day. The aim all through should be to produce fine strong healthy foliage and flowers, and a close high temperature will never do this.

The varieties named above are the best for very early forcing and if in the right condition to prune and start at once, say October 1, can be had in bloom with reasonable certainty by Christmas or January 1.

For the later crops less care is needed to rest them, as the early frosts will greatly aid the resting process, though the plants should not be allowed to stand out in very severe frost, especially if they are very wet, or the roots are apt to suffer in consequence. They should be placed in a cool greenhouse where they can be protected from storms, etc., then they can be pruned and brought into the warmer greenhouse as desired.

JOHN N. MAY.

Rare Orchids of Recent Years.

Cypripedium bellatulum egregium. This fine variety appeared several years ago among an importation of bellatulum introduced by Messrs. Low. It is an extremely beautiful and rare plant, differing from the type. It has large flowers measuring four inches across, very full, color light yellow, densely covered over the whole flower with violet colored spots. This variety has lighter green foliage, not so broad and dense as in the type. It is, like the type, rather difficult to handle if conditions are not suitable; but grown in pans and baskets suspended near the glass with plenty of drainage and good fibrous peat and live sphagnum, with plenty of heat and moisture we find no difficulty in increasing the plant; it is flowering now in September.

Laelio-Cattleya leucoglossa. This handsome hybrid was raised by Messrs. Veitch & Sons and was derived from *Cattleya Loddigesi* and *Laelio-Cattleya Fausta*, the latter itself a hybrid and the first

hybrid *cattleya* raised by Mr. Seden, which flowered in 1872 and was derived from *L.-C. Exoniensis* and *Cattleya Loddigesi*. *Leucoglossa* was raised about four years ago and received a first-class certificate from the Royal Horticultural Society, and it is well deserved. The plant is free growing, resembling in a great measure *C. Loddigesi* but more robust in habit, carrying from four to eight flowers on a spike; slightly tinged pink sepals and petals averaging about four inches across; lip broad well expanded with a large area of light yellow extending into the throat. Flowering in late August and September and lasting about one month in perfection enhances the value of this charming plant.

Cattleya Hardyana, Timperly var. This handsome *cattleya*, probably one of the most gorgeous varieties yet seen, is a natural hybrid between *Cattleya Warscewiczii* and *Cattleya Dowiana*. It flowered for the first time about eight years ago in the collection of the late Mr. Hardy, Timperly, after whom it was named. Though many forms have since that time appeared it is doubtful if any one approaches the original type. Mr. Hardy divided his plant and the late Mr. Ames procured one portion at a large price over two years ago. This variety resembles *C. Warscewiczii* in its robust growth, being more vigorous than our other forms, the individual flowers measuring over seven inches across; sepals and petals of a deep rosy purple; the lip fully three inches across and three and one half in depth; the front portion much frilled, of rich magenta; the throat and upper portion of lip rich golden yellow as in *C. Dowiana aurea*, and richly veined with deep purple. The labellum has the two eyes peculiar to *Warscewiczii*, which in this plant are a rich golden yellow margined with magenta. The flowers have much substance, strongly and sweetly scented and last about three weeks in perfection.

The variety *Amesiana* was introduced about five years ago by Mr. Sander. It differs from the first type of *Hardyana* by its dwarfer habit, partaking more after the *Dowiana* parent. The flowers are about five inches across lip, of intense magenta purple carried well into the throat; the column and side lobes richly colored. It has the two rich yellow eyes as in the first flowered type and has rich purple veining. The sepals and petals are suffused with rosy purple. While this variety has a richer and deeper colored lip it has not the quantity of rich golden area which distinguishes the Timperly form. Flowering August and September.

North Easton, Mass. W. ROBINSON.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

Last spring I received some Jacqueminot carnation cuttings that had rust on them, and I wanted the variety very

badly after seeing the blooms but at the same time did not want the rust. There had been considerable discussion over the plan of keeping the plants in the house all summer as a means of eradicating the rust, so I determined to try this method and have

who tried it extensively, if he would tell us the weak points in this method of culture. Not long ago I saw several houses that had been planted in all summer but they did not look very encouraging and seemed to lack constitution, being drawn up and very light in the leaf. Even with

feet long of No. 10 galvanized steel wire to each plant, these tied at the top to a wire running lengthways of the house. In summer the stakes are pulled out and packed away in bundles, thus lasting for many years.

J. H. Ladley makes use of a contrivance illustrated in the AMERICAN FLORIST some two years ago, which he briefly describes thus:

"We bend No. 14 galvanized wire to the length and width of a row of carnations crosswise of the bench, with a hook and eye to make a continuous frame; this is clamped around the row and raised

Fig. A.

found it to work well, for my plants to-day do not show any signs of rust. They were potted up, all the rust picked off carefully and the tops dipped into Bordeaux mixture made according to the regular formula. They were carefully watched and the rust did not develop

first-class ventilation it does not seem possible to grow carnations under glass all summer, and get good vigorous plants that will compare with those that have been grown in the field.

Great care should be used in syringing your carnations after they have started. Daybreak is especially susceptible to water and at the same time is one of the first to be attacked by red spider. The best method of handling a carnation of this kind is to wait until about noon and then syringe it hard. The spider on a clear day are in their most active condition about noon and you will destroy more then than at any other time of day; that is of course on clear days. On cloudy days it is best not to syringe at all. Whenever the leaves begin to show spots they should be given a good dry rest for a week or ten days and if they need watering during that time do it in the middle of the day so that the foliage will dry off quickly. There are other varieties that seem to thrive best with plenty of water both on top and in the soil; each grower can soon determine which these varieties are and treat them accordingly. It is well not to leave the watering and syringing too much in the hands of your employes, but oversee and instruct them all you can. It is easy enough to hold the end of the hose but to handle it right is almost a fine art. ALBERT M. HERR.

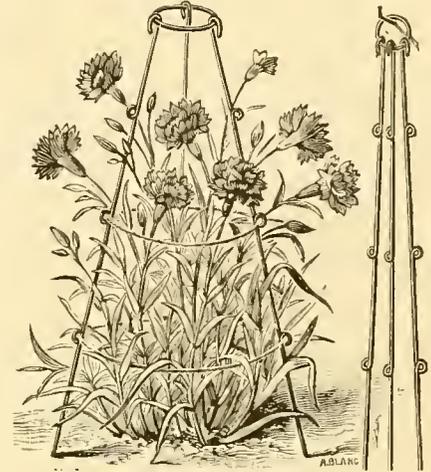

Fig. D.

sufficiently to bear gently where the plants need support, and tied together once or twice to keep from slipping down; an occasional stake is used with very tall sorts to keep from toppling. We find this support fairly satisfactory, having the advantages that the soil can be worked, and the flowers cut with long stems; the

Carnation Supports.

There are many devices now in use for supporting carnations, some of home construction, others manufactured in quantity for the supply trade and each claiming to be the best contrivance for the purpose.

The ideal carnation support is the one which offers the least obstruction to free handling of the plants, gathering the flowers or working the soil, simplicity and rapidity of adjustment and durability being also important points. With the older varieties of carnations where nine or ten inches was the maximum length of stem, a foot wide wire netting stretched around the outside of the bed to keep the plants off the path or some such simple contrivance was all that was necessary, but with the modern carnation with its eighteen or twenty inch stem different treatment is called for and some substantial and uniform method of support is essential. The prevalence of various diseases also makes it necessary for the grower to be able to reach every part of each plant at all times in order to insure a thorough circulation of air around and under the plants and thus keep them in healthy condition. With plants properly supported stronger stems and more perfect blooms are also assured.

Some growers use a system of longitudinal wires similar to that employed for roses. This is the plan favored by H. E. Chitty. Jos. Heacock also adopts this method using one stake two and one-half

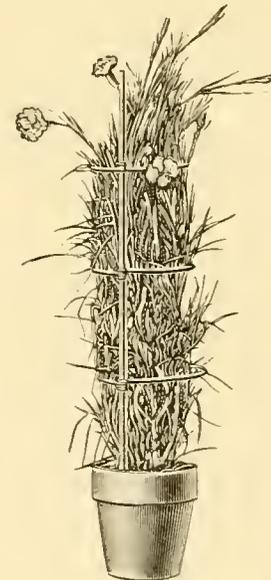

Fig. E.

support, except a few stakes maybe, being almost no obstruction to free intercourse with plants and soil."

The plan adopted by Ernst Asmus, W. R. Shel mire, J. N. May and many other prominent growers is to use galvanized chicken netting No. 18 or 19, two or three inch mesh, about one foot or more in

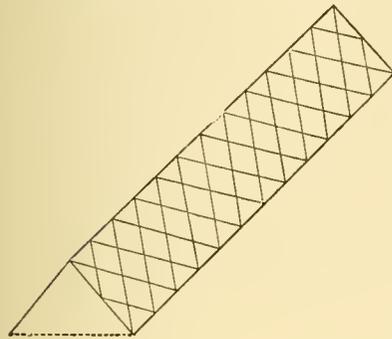

Fig. B.

again until just about the time they needed repotting into threes, at which time they were looked over carefully again and all the affected leaves taken off and dipped as before. When they were put into fours there were only a few spots of rust; these were again picked off and the plants dipped, since which time up to the present there has not a spot of rust developed. These plants are not as large nor as strong as the plants that were grown outdoors all summer, and the plan is hardly practical excepting where

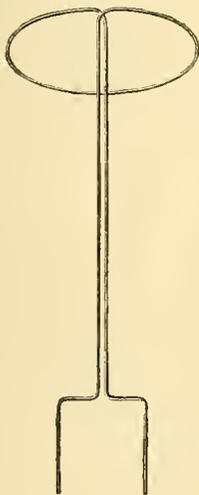

Fig. C.

as in this case you have a few of something that is too valuable to run any chances with the rust.

One does not hear much of the plan of growing the plants in the houses the same as roses all summer. It would be interesting to hear from one of the growers

width according to height of variety grown. This is cut into lengths of the full width of the bench (some prefer to cut it half width of bench), then bent into the shape of Λ and slipped in between the rows of plants. The benefits claimed for this plan are cheapness and durability, and a free circulation of air at the base of the plants where the foliage is heaviest and air is most needed. The tops are left entirely free and there is no interference with the taking of cuttings or picking of flowers with the longest stems. When it is desired to stir the dirt it is but little trouble to remove and replace the meshes, especially if they are cut as recommended by some growers, one-half the width of the bench and pushed in from each side to the center. Mr. Shelmire advocates in the case of extra fine varieties that bring a fancy price, individual wire stakes and careful tying. Wm. Swayne uses the above method excepting when he grows tomatoes between the rows as a second crop, in which case he uses stakes split from two foot cypress shingles.

Fred Dorner thus describes the method of support employed by him in the past and that which he has now adopted:

"For years we stretched wire over the benches ten inches apart and eight inches from the ground and connected them with a network of twine. The plants grow up through this network, and if not of sufficient height we put another such support six inches above the first. This is very well for the flower stems but does not keep the plants sufficiently away from the ground.

"Others use wire netting bent in an up-turned Λ shape putting them across the bench on the ground between the rows. This will keep the plants away from the ground, but is no support for the stems and flowers. I have concluded for the future to combine the two methods and will give a brief outline of how to do it.

"Use wire netting of sufficient strength made of galvanized wire, cut in lengths so it can be bent in the form as shown in Fig. B, six inches high and eight inches wide, placing across the bench between the rows. This I suppose is best done at the time of planting or soon after, before the plants have made much growth, and the first crop of weeds have been removed. This will be support for the body of the plant and gives the much needed circulation of air underneath; and when watering the hose can be pushed under the netting without hindrance to or making the plants wet, when they need be kept dry.

"Now the support for stems and flowers. Use No. 16 galvanized wire. Stretch from end to end of bench ten inches apart and eight inches above the wire netting. Support these by light wooden cross pieces every fifteen to twenty feet (I use plaster laths). Mark these cross pieces where the wire will come to rest and make a little cut with a saw, just enough so the wire can be pressed into it and will thus be held into place. Now take common white twine and wind it on a stick or spool. This gives a better way to hold the twine than in the ball form. Commence at one end of the bench, fasten the twine to the outside wire, run diagonally across, passing the twine around each wire as you proceed. When half way hand to a man on the other side of the bench to carry it to the outer wire and return in the same diagonal way. The man at the other side may commence at the same time in the same way with a second spool. They will meet in the center and exchange spools of twine. In

this way the work will be done in half the time as both men will be continually occupied.

"This forms a network as shown in Fig. A, through which the stems will grow up and give them support without impairing its freedom of growth as when tied to a stake or allowed to fall over and get tangled up, and also allows freedom in cutting any length of stem desired. Some may think this slow and expensive work, but it is just the reverse. At our place two men will stretch the wire and put on the twine netting in a house 20x100 feet in one day, and the wire we use now for the third season."

Fig. C shows the device used by Edwin Lonsdale. It is home made, cheap, durable and effective. For a support which is to be seven inches high when in position three feet of wire is required. From one pound of No. 13 galvanized wire at four cents per pound ten to twelve such pieces can be cut. Having driven three or four nails into a plank the feet of the support are made by a few rapid movements, the round part or hoop which supports the flowering stems being turned over a round log three and one half to four inches in diameter. The bow end is then placed between two pieces of board fastened sufficiently close together to barely admit the wire and then with a quick bend to one side the device is complete. An active man or boy after a little practice can make these very rapidly. In the case of tall growing varieties, especially towards spring, a higher support than seven inches is desirable.

The device called "Michell's Practical," Fig. D, consists of three galvanized wire stakes looped at proper distances to admit fastening thin wire or string as shown in the illustration and has been received with much favor by many carnation growers. Its tripod form makes it very stable when in position and when not in use it packs away in small space.

The Worcester Wire Co.'s "Perfect" support, which is the last we illustrate (Fig. E), received a certificate of merit at the Atlantic City convention. A small ring five inches from the base of the standard makes a foot piece to rest on the soil thus keeping the support in upright position. The supporting rings are adjustable up or down the standard at any height and can be opened to adjust around the stems.

Miscellaneous Seasonable Hints.

After the 1st of October there should be no excuse for having any tender plants left exposed outside in this latitude. Don't be deceived by fine weather. We may escape a frost at the end of the month but we seldom do. Hydrangeas that are planted out in frames or the open ground can remain a few weeks later; a little frost on them does no harm; it ripens the wood and they winter all the better for it.

If you have not planted in the frames all your pansies for spring sales do it at once. They have yet a good month to grow before they need the protection of glass. Don't forget that cow manure is what produces fine pansies, both plants and flowers.

If you grow several thousand Harrisii lilies don't leave them all out for Easter or bring in too large a quantity at once; from Christmas on there is a steady demand and use for these fine flowers, and many a funeral bunch or decoration can be made with these when you are short of roses. Bring in 50 or 100 at a time and endeavor to have a constant supply to cut but never too large a quantity at

once. Your main crop for Easter will do finely in the frames for weeks yet to come; in fact you will have lots of room from the throwing out of mums before you need bring in your Easter crop. The earliest forced that you want for December and January and which are now 5 or 6 inches high can be given a temperature of 60° at night, but must have a light bright house. There is no plant we grow that is so easily and permanently injured by greenfly; smoking twice a week is the cure or rather the prevention. There is no doubt the splitting and separation of the petals in the mature flower is caused by the attacks of the aphid when the bud is in a very small state.

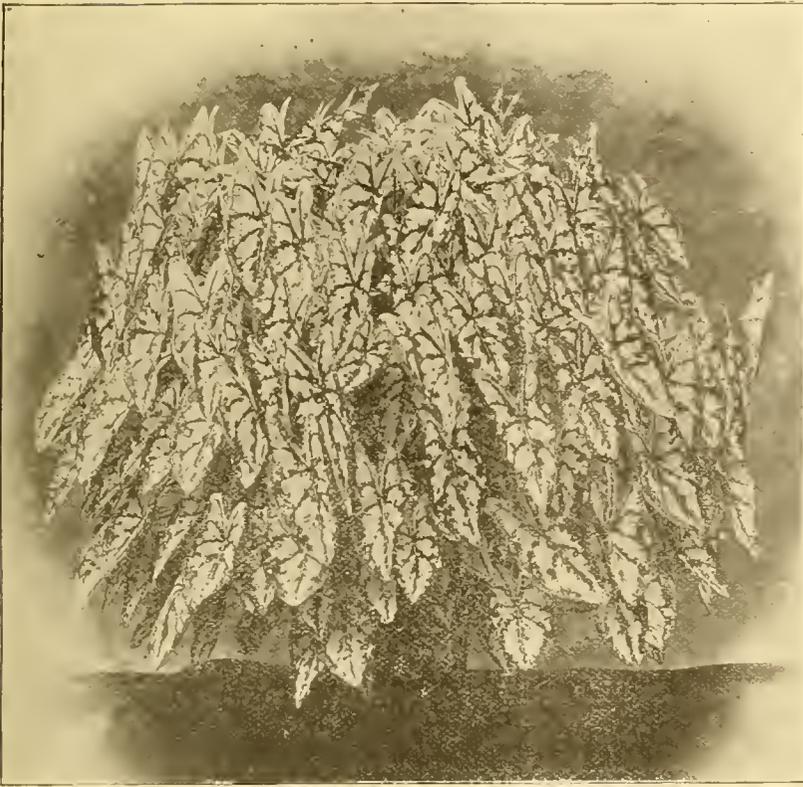

A very useful plant with us this year, especially for vase, etc., where partially shaded, is *Begonia Vernon*. Sow it now and you can have fine plants in 4-inch pots a foot high and in full bloom by next May. It is a robust grower and easy to manage. Some vases of it in our cemetery this summer have been most satisfactory. It was in flower on June 1 and is still a mass of flowers.

Primulas should now have their last shift; with me a 4 or 4½-inch pot. Don't be afraid to pot a little deep; it will keep the plant from shaking at the neck. A temperature of 50° at night will just suit the primulas. Unlike the *calceolaria* and *cineraria* they are little troubled with our enemies, and syringing is not necessary. The *calceolarias* must not be allowed to ever suffer for want of water; give them plenty of room and keep fresh tobacco stems between the pots. It will help greatly to keep down the fly, which is an awful pest to these very showy plants. The *cinerarias* that were sown in June will soon take their last shift; use the soil rather coarse that the water may pass freely through. You can easily kill a *cineraria* with over watering or the soil remaining long in a sodden state. The chief point about producing a sturdy bushy *cineraria* is to give them room to spread, all the light you can and keep them cool; a night temperature of 40° is ample for them, and they will make better plants than in 50°.

If you have but a few plants of any choice new *canna* you need not let the frost kill the tops; lift them, divide into as many pieces as you can and keep growing all winter, dividing whenever the plants are large enough. With those that you have sufficient stock of lift as soon as the tops have been hurt by the first frost. Cut the stems down to within a foot or so of the root and after drying in the sun a day or two store away beneath a cool bench; there is no better place for them but place the roots on boards or the dampness of the ground will start them growing, which you don't want.

I have just made the acquaintance of a very useful outside decorative plant, *Strobilanthes Dyerianus*. I don't know what family it belongs to [*Acanthaceae*.—Ed.] It grows as freely as a *coleus*, and can be propagated as readily, although perhaps not so rapidly. Its fine leaves are a rich bronze purple. In the *amaranthus*, *coleus* or *achyranthus* we have nothing like it in color, and for subtropical beds and other uses it is going to be most valuable. It is said to keep its color or rather improve its color under our bright summer suns. W. SCOTT.

DO YOU WANT Mr. Scott's seasonable hints for the year in book form, so that you can refer readily to his suggestions for any week in the year? You will find them in this form in our trade directory and reference book for 1894. Price \$2.00.

CALADIUM ARGYRITES.

Caladium Argyrites.

This little gem is one of the most beautiful and serviceable of small decorative plants. For table decoration, for baskets and jardinières it has no rival.

The plant shown in the illustration was grown from one tuber put into a 4-inch pot about the last of May, shifted later into a 7-inch pot and photographed on August 23. Mr. George McWilliams of Whitinsville, Mass., the grower of the plant illustrated, gives his method of culture as follows:

"We pot in light soil and when rooted through we shift into larger pots. The potting material used is sphagnum moss with sometimes a little bone meal added, but we find that they root more quickly in the pure moss. After they are well rooted we give them liquid manure."

Philadelphia.

Messrs. Davis, Huster and Huebner have returned from their trip to Pittsburgh and express themselves as very much pleased with what they saw, and particularly with the conservatories at Schenley Park. This park contains the finest range of glass in America, and probably it is not equalled in extent anywhere else in the world. The condition of the plants reflects great credit on Mr. A. W. Bennett, the superintendent. The collection of tree ferns from the World's Fair is making a rapid growth. It is said that this is probably the largest number of varieties of specimen plants ever gotten together.

We are informed that there is plenty of "sand" back of the new market movement that is to be started immediately, and not next year or later. It is to be called the Philadelphia Wholesale Floral Co., or Commission Co.—we are not quite

certain which. The stock is to be held entirely by growers, dealers and persons connected with the business. We are also informed that all the prominent Philadelphia growers are interested. The flowers are to be sold on commission under the management of a committee appointed or ordered by the stockholders. While the principal stock to be handled is cut flowers, there is to be kept in addition everything required about a cut flower store or grower's establishment, such as seeds, bulbs and all appliances. This seems like a business undertaking for the good of the trade. Personally we don't like the way in which it is said the flowers are to be handled. We would prefer that each man handle his own stock, which would keep the competition feature, so essential to the life of trade, a prominent factor. We are glad, however, to be able to report something, even if it is only a suspicion, and that is all it really seems to be, as nobody will say a word authoritatively about the movement, yet there seems to be something more than rumor in it. Why this secrecy? If it won't stand the light now it does not say much for the market later on.

At the last meeting of the Horticultural Society the coming chrysanthemum show received considerable attention. The committee on arrangements were directed to prepare at once a plan of the available space in the Academy of Music and lay out the aisles and tables and also to select a position for a flower booth from which flowers are to be sold. This space is to be let to the highest bidder. Sealed proposals are to be sent to the secretary up to October 16, when they will be opened. The committee reserve the right to accept or reject bids as they think will be for the best interests of the society.

Robert Kift proposed as a new feature

that there be exhibits invited from other horticultural societies and florists' clubs giving chrysanthemum shows, making a sort of inter-city contest. Philadelphia for instance will exchange with Boston, New York, Buffalo, Baltimore, Chicago and other cities, one hundred fine blooms. These will be entered in the name of the society or club sending them. They will be long stemmed flowers and arranged in one large vase resting on a low table or the floor and placed so as to be seen from all sides. The finest vase in the collection to be awarded a premium in the shape of a cup or diploma, the home city of course not competing with the others. The flowers necessary to make these exhibits should be first-class in every respect and great care given to their packing and shipment. The expense should be borne by the local club or society, and while it might be considerable it would be more than returned in gate receipts. The reporters would have plenty to talk about in describing the entries of the different cities and the fact that the local club's exhibit had received the premium in other cities would be a good drawing card to any show. A committee was appointed to communicate with the secretaries of other societies and try and get their cooperation in bringing about such a display.

A special feature of the exhibition is to be a display of vegetables; exhibits of this character were at one time very popular and it is proposed to revive the interest in farm and garden products by offering liberal premiums.

Geo. Huster, Paul Huebner and Chester Davis recently spent a few days in Pittsburg, a sort of advance guard looking up rooms for their stay during the convention next year.

Mr. Henry Pfister of the White House conservatories was in town lately.

K.

Chicago.

Business continues to improve gradually. Local demand for the better quality of stock is now fairly steady. The retail boys feel encouraged once more to carry a stock, something they hadn't thought of doing for months past. The shipping trade is also reviving, and considerable stock was disposed of through those channels. Rose stock is plentiful though, but the increased demand has made no impression on prices in general; first quality rules firmly at \$3 for such varieties as Bridesmaid, Testout, Kaiserin and Meteor. The bulk, however, sells at from \$1 to \$2. Beauties continue in steady demand, with prices firm at \$1.50 per dozen for A1 long stemmed and \$1 for medium long; the cut is fairly large, but few good flowers go to waste.

Carnations have advanced a little, the best going as high as \$1, and 75 cents for the bulk. In pinks we note some very fine Sweetbrier, Nancy Hanks and Wm. Scott. Lizzie McGowan leads in white; some very good Uncle John also may be noted. Silver Spray is abundant, but not of very good quality, with the exception of an occasional lot here and there. Portia in red is the best at present. Violets of the small single variety have made their appearance, but the demand for them is very slow. Valley was in brisk demand this week and the stock ran short on several days, but there is plenty in sight from now on.

The only outdoor stock worth mentioning is cosmos, which in fairly good supply sells readily. Dahlias in some localities were nipped by Tuesday night's

frost, but the dahlia crop is a poor one anyway this year, so the loss cuts little figure. There is quite a call for asparagus, which this year the same as last is mostly received from outside points.

New York.

Cooler weather has caused a temporary slacking up in the quantity of roses coming in, and a very decided improvement in quality. The windows of the retail florists generally show indications of reviving industry, and as a rule are already exceedingly attractive. The wholesalers and the market begin to present a busy appearance. Carnations are selling well if of fine quality, and white flowers of all kinds show a gratifying advance in demand.

The sale of McFadden's orchids was only fairly attended, and the prices ruled low on most of the lots. Auctioneer Elliott was evidently not satisfied with his congregation. "You understand the quarters better than the dollars. Heavens and earth! I'll sell any mortal thing, myself in it, if I can only get a bid," he exclaimed in despair. But much of the stock was in poor health, and evidently the cream of the famous collection had been withheld or sold previously. The best price obtained was \$18 for *Cypripedium leucorrhodum* with three growths.

August Rolker & Sons have made alterations in their store on West 24th street which add much to its convenience and general appearance. E. C. Horan's cut flower establishment on 27th street has been thoroughly overhauled inside and out, and carnations ought to bring half a dollar a hundred more in consequence.

Edwin Lonsdale of Philadelphia and Sam Goldring of Albany were noted among the interested attendants at the auction sale.

St. Louis.

All the delegates to the convention arrived home safely, and express themselves as more than pleased at the reception accorded them at Atlantic City. Those who did not attend will have to endure for a long time the reminders of what they have missed. The bowling team was let down rather easy after the poor showing they made; it may be that several games rolled here with the pins at regulation distance can account for the lenient treatment. The innovation introduced, that is, the shooting contest, seems to have taken strong hold upon some of the members, and in all probability will lead to the formation of some kind of an organization for its continuance.

At a meeting of the committee having the chrysanthemum show in charge committees were appointed and granted an allowance to provide for music, decorations and advertising. It was also decided to print small notices announcing the show, to be used by the florists in their correspondence, bills and so forth. It was decided also to have a daily programme printed announcing the awards of the previous days, and the special features for each day as they occur.

The regular meeting of the club was held on the 13th with a very poor attendance present; very little besides routine business was transacted, nobody seeming to have recovered from the break in the regular routine caused by the convention. Mr. Weber gave a description of the trip and entertainment for the benefit of those who had not been present, and poked considerable fun at the

bowling team, which was taken as it was meant. The committee having in charge the raising of a guarantee fund for the chrysanthemum show have met with such opposition that a special meeting of the Florists club has been called to decide what shall be done in the matter, whether it shall be continued or done away with altogether. R. F. T.

Boston.

There seems to be a fair amount of business coming in to the various centers and a general hopefulness prevails. The amount of trade is not large but it is far ahead of the summer volume and is remarkably steady for the season. Roses show the good effects of the cooler weather and are coming in good shape. Outdoor flowers are about finished.

Horticultural Hall was gay on Saturday, September 22, with hardy asters. Every year seems to add to the variety and beauty of these useful fall blooming plants and no hardy herbaceous bed is complete without them. The collection shown by Geo. Hollis was rich in rare species and beautiful new varieties.

The changes in business are fewer than usual for this season of the year. Bowditch & Co. will move October 1 from their present location under the Tremont House to 168 Tremont street, where they will have a store admirably fitted for a first-class florist business. Geo. A. Sutherland is making extensive alterations and improvements in his store on Bromfield street.

There was a meeting of parties interested in bowling at the office of Welch Bros. on Saturday, September 22. Future matches and challenges are talked of but nothing definite is yet decided upon. Possibly the meeting of the Carnation Society next February may furnish the incentive for a little tournament.

Ernst Asmus passed through Boston on Monday last bound for the happy hunting grounds in the remote corner of Maine. Jackson Dawson is off on a collecting expedition in the wilds of Rhode Island.

Cincinnati.

The shipping trade is improving, so is the quality of stock. American Beauties are coming in more rapidly, and find ready sale at 15 cents for the best. Brides and all white flowers are very scarce, the supply not equal to the demand, and now that frost has put in its appearance outdoor stuff will be pretty well used up. Mermets and Bridesmaid, as well as Perles, are improving and sell at 3 and 4 cents for the select. Carnations are selling for 1 cent, and are coming in fairly well. Lily of the valley as grown by Magrie & George is in fine form, and brings 4 cents, with good demand. Trade in all branches is much better in this city. Our retail stores are busy with funeral and decorative work.

On Saturday the Globe Clothing Company opened its doors to the public, but not until the florists had added the finishing touches. Jules Baer had several original designs. Sunderbruch's Sons also furnished several designs and 2,000 roses. You see they can't get along without the florist no matter how choice and fine the stock of goods displayed.

A recent visit to Fred Waltz's greenhouses shows that Fred has been busy during the past few months; his mums are the best to be seen around our city. Two houses especially are fine; in one he has about two hundred plants of a white seedling; they now have buds about the

size of a dime, and Fred says will be ready for market by October 5. Last year this same seedling was shown in fine form at our October 14 meeting of the Cincinnati Florists' Society. In another house he has all the new varieties of last year, or at least all the good ones. Major Bonnaffon is the shortest in the house, being 5 feet high. Mrs. E. G. Hill is fully eight feet, and numerous other kinds 6 to 7 feet; the foliage is faultless, and the flowers will certainly be likewise. Fred is also quite an expert with seedling cannas, and one especially is a bright crimson edged with yellow, very showy, and of a dwarf character. His seedling carnations are also looking well; the most promising one is a bright scarlet. The balance of his stock is doing well, especially the Marechal Niel house, which is the only one of the kind around our city.

The new rose Mrs. W. C. Whitney grown by E. G. Hill & Co. is selling well and commanding a good price. It is beautiful in color, foliage and very fragrant, and a good keeper.

John Fries of Newport, Ky., reports a large wedding decoration for the 26th. Uncle John has also built two more greenhouses 100x20 feet for growing roses and carnations.

Our visitors during the week were Fred and Geo. Waltz of Wilmington, O.; Frank McGregor of Springfield, O.; Frank Pentland of Lockland, O.; Mrs. John Lodder and Miss Hoeffner of Hamilton, O.; and F. H. Troy, for Pitcher & Manda.

Indianapolis.

The regular meeting of the Florists' Club for September was well attended. Two new members were elected. The picnic committee reported all bills settled and was released with thanks. Mr. Parker, chairman of committee on Crown Hill Cemetery matters, reported progress: probably the trustees will arrange to build suitable greenhouses and employ a competent supervising florist. Mr. John Hartje read a paper, "The Ideal Florist." Among his remarks he mentioned in particular that those people who put funeral notices in newspapers mentioning "no flowers" generally have the best and most profuse flowers, they preferring to have only first-class material and not so much rubbish as is sometimes sent indiscriminately. The paper created a great deal of discussion.

A committee on bowling was appointed to investigate and report if a suitable bowling place can be arranged for by selling sufficient stock to the members to build one. The following committee was appointed to join a like committee of the state society to act in entertaining and otherwise taking care of all visiting florists and others during the coming chrysanthemum show: Frank Alley, E. A. Parker, Prof. Walker, W. H. Kelley, a reception to be held Thursday evening, November 8.

The whole committee on chrysanthemum show of the state society met at the Dennison Hotel, this city, on September 11. All business to be decided by the whole committee was discussed and acted upon. The State Horticultural Society will again make an exhibit of fruit and will hold their annual meeting at the state house during that week. The regular and special premium list amounts to between \$1200 and \$1300. Complete programmes and premium lists will be issued about October 10. The committee on reception to join a like committee of the Indianapolis Florists Club was chosen as follows: Anthony Wiegand, J.

D. Carmody, W. Langstaff, J. S. Stuart.

The Indiana State Fair was held near this city September 17 to 22; it was a great success, weather being very fine. The Horticultural hall was only partly filled, fruit display small and in plants only two good displays; one very good amateur display. Anthony Wiegand received first premiums on best display of plants, caladiums, variegated plants and vases; Bertermann Bros. first on palms, ferns and lycopods, blooming begonias, cannas, asters, geraniums, funeral designs, bouquets, cut flowers, gladiolus, most original show design and most original funeral design; John Rieman & Co. first on floral baskets; W. W. Coles, Kokomo, first on cut roses; Chas. Wheatcraft first on hanging baskets and foliage begonias. The arrangements in the floral hall were a disgrace to our profession, the superintendent having taken a pattern after the horticultural building at the World's Fair, a very appropriate name would have been "Fakir Hall," all kinds of devices being for sale in the avenues of the building. Another year this must be changed or no florist will be found there. The grounds in general are in wretched condition.

A storm two weeks ago tore away a part of the greenhouses at the Deaf and Dumb Institution, also many fine shade trees. Bertermann Bros. were also damaged about \$50 in broken glass, etc.

Another greenhouse firm is reported to be under way; surely no need for any more in this neighborhood. Business is slowly reviving. W. B.

New Notes.

XENIA, O.—J. J. Lampert has remodeled and improved four houses.

CHESTER, PA.—Thos. F. Delahunt is adding a new house 20x104.

SYRACUSE, N. Y.—The American Nursery Co. started in business here last summer.

MONTICELLO, ILL.—W. F. Smith and sister of Tuscola, are building a greenhouse here.

BLOOMINGTON, ILL.—Mr. Andrew Washburn has opened a floral store on North Main street.

STERLING, KANS.—R. J. Shay has built a greenhouse in which to grow early vegetables and plants.

BLOOMINGTON, ILL.—Trade is opening up nicely and think we will do more business than expected.

NORTHAMPTON, MASS.—Mrs. J. Kirsten has resumed the florist business conducted here by her late husband.

NICKERSON, KANS.—Mrs. C. E. Decker has sold her greenhouse and stock to Henry Clure of Sterling, Kans.

AUBURN, ME.—A severe hail storm smashed all the glass on the greenhouse of Cornelius Chippendale on September 5.

LAPEER, MICH.—W. H. Watson is building four additional greenhouses which will give him 3,000 feet of new glass.

NEW BEDFORD, MASS.—Stephen E. Shaw will erect a greenhouse 10½x26 on the east side of State street, south of Willis street.

IPSWICH, MASS.—Benjamin Fewkes is making extensive improvements in his establishment, including new heating apparatus.

SEATTLE, WASH.—Mr. S. T. Kelsey Jr., 86 Sullivan Block, will act as agent for the Pacific States for Harlan P. Kelsey of Kawana, N. C.

BELLEVUE, PA.—Mr. Henry Eichholz, formerly with Mr. Fred Burki, has rented the greenhouses of Mrs. J. F. Nitterhouse at Waynesborough, Pa.

KINGSTON, N. Y.—Pye & Mueller have sold their business in this city to D. B. Stow, who will continue it. Messrs. Pye & Mueller will move to Key West, Fla.

HUNTSVILLE, ALA.—Chase Bros. have leased the Wells farm, which lies opposite their nursery, for a term of three years. This will give them a total of 600 acres.

SAN FRANCISCO.—The California State Floral Society has changed the dates for the coming chrysanthemum show from November 15, 16 and 17 to November 1, 2 and 3.

BLOOMSBURG, PA.—Mr. J. W. Mann has resigned his position with Mr. J. L. Dillon after being in Mr. Dillon's employ for 12 years. His plans for the future are not yet settled.

LOUISVILLE, KY.—Messrs. Nanz & Neuner have purchased the six greenhouses of Morat & Sons and have added them to their plant at St. Mathews. Messrs. Morat & Sons retire from the business.

YPSILANTI, MICH.—Chas. F. Krzysske has purchased the greenhouse and stock of Mrs. A. E. Bowe and has removed the same to his place on South Washington street. Mrs. Bowe retires from the business.

WEBSTER, MASS.—The greenhouse plant leased and run by Eugene O'Hara the last ten years will now be managed by the owner, Mrs. A. L. Converse, assisted by P. C. Riebe. A house 40x16 for carnations has been added to the plant.

LINCOLN, NEB.—A chrysanthemum show will be held here next November. At a meeting of professionals and amateurs recently held the Lincoln Chrysanthemum Society was organized with Mr. J. H. Haddonson as temporary president and secretary.

OMAHA, NEB.—The co-partnership heretofore existing between J. R. McPherson and Robert F. Rain, under the name of the Elm Park Floral Co., has been dissolved by mutual consent, Robert F. Rain retiring, and J. R. McPherson continuing the business.

BLOOMINGTON, ILL.—Mr. Andrew Washburn has added four greenhouses to his plant this year and taken into partnership his son, Frank L. Washburn, and they will conduct a florist and seed business at 531 N. Main street, under the firm name of A. Washburn & Son.

GRAND RAPIDS, MICH.—The Wealthy Avenue Floral Company is making extensive alterations and improvements in their plant at 891 Wealthy avenue. Two new greenhouses, one 22x112 and the other 14x60 feet, are being built and two new boilers are being put in.

COLLINSVILLE, ILL.—Miss Annie, daughter of Mr. John Kropf, the florist, died September 13, aged 20 years. Miss Kropf was a great favorite among her friends and acquaintances and the funeral was very largely attended. Mr. Kropf's

many friends in the trade will be deeply grieved to learn of his affliction.

NEW ORLEANS, LA.—Mr. Alfred Staephoud, foreman for Mr. E. Valdejo, was found drowned in the greenhouse pond in but two feet of water. He is supposed to have fallen into the pond while in an epileptic fit. He was in full charge of the establishment during the absence of Mr. and Mrs. Valdejo on a trip to France.

ALBUQUERQUE, N. M.—Fred Moore, a florist from Chicago, died at the city building September 6, and was buried at city expense. He was kindly cared for after his wants became known by ladies of the Episcopal church. He said he had relatives in Chicago who refused him aid when appealed to during his last illness.

GALESBURG, ILL.—I. L. Pillsbury is building two new greenhouses here, one a rose house 20x100, the other a propagating house 8x100. He will remove his wholesale rooted cutting business from Macomb to this city on account of the better shipping facilities. The retail business will be carried on at both places as before.

LENOX, MASS.—The floral tub parade on September 15 was one of the most elaborate and successful ever held. There were 31 carriages in line and all were decorated with flowers in the most extravagant manner. Hydrangeas, gladioli, clematis, asparagus, dahlias, asters and wild flowers were used in enormous quantities. The turnout attracted a great crowd of sight seers.

IONIA, MICH.—A hail storm of phenomenal character for this locality struck this city September 7. Hail stones and chunks of ice of all shapes and dimensions, from the size of a good sized pocket knife to that of a hickory nut, some edged with sharp barbs like sand burs, were gathered up after the storm. Fortunately it was of short duration or the damage to glass and vegetation would have been enormous. Only a few hundred lights of glass were smashed.

LEOMINSTER, MASS.—To see carnation Grace Wilder in all its original glory go to Jos. Fuller's. Whether it be Leominster soil, Fuller's skill or a combination of the two deponent saith not, but even old acquaintances would scarcely recognize her as she appears here full of vigor and of unexcelled color. Other carnations and chrysanthemums are looking well also. When the flower trade languishes Mr. Fuller has only to turn for comfort to a twelve acre field of asparagus which for profitable returns leaves the flower trade far behind and in spring time furnishes employment to all the early risers in the neighborhood.

SAGINAW, MICH.—The *Courier-Herald* of September 9 says: "Friday evening the board of cemetery commissioners opened bids for planting and maintaining the flower beds in the cemeteries. There were three bidders for the contract, as follows: Mrs. George Waldbauer, \$172; William Roethke, \$242, and Charles Frueh, \$215. The contract was awarded to Mrs. Waldbauer, she being the lowest bidder. The flower beds that must be maintained under this contract are sixteen in number and this year contain 7,763 plants." If the number of plants to be supplied is correctly given this would be an average of only a trifle over 2½ cents per plant. If the plants are to be anything more than rooted cuttings there can't be much money in the contract.

St. Paul, Minn.

Several severe frosts have quite effectually killed outside flowers. This has helped trade to a certain extent, but it is not as brisk as it might be. Country orders are coming in quite freely and funeral work is in good demand. This tends to keep the supply pretty well used up. The supply of roses is good and of fine quality. Meteor, Kaiserin, Bridesmaid, Perle and Beauty are extra nice. Carnations are in good demand with but a small supply.

Growers are now putting in outside stock, repairing broken glass and making ready for winter. Carnations are all housed. While those that were watered freely during the summer are looking well those that had no water are very weak and inferior. My former reports would indicate that field grown carnations were better than usual this year, but quite an extended trip of careful observation about town and in Minneapolis fails to reveal many first-class plants. Of the thousands seen only two houses could be termed strictly first-class.

The display of plants and cut flowers at the Minnesota State Fair was very poor, the quality below the average, while the number entered was very small. It is hard to make the average grower believe that a display requiring several days work in carting, arranging and caring for the plants, with the risk of damage, etc., netting him from \$25 to \$50 in premiums, is at all profitable. Coming at a time when every one is busy with his fall work, it never receives the attention that it deserves.

During the past two weeks we have had several nice showers, quite breaking the long drouth, but too late to be of any practical benefit to vegetation. We have also had quite a severe cold wave, the thermometer going down to the freezing point. This necessitates constant night firing if one's houses would be free from mildew.

The beds at the parks are still looking fine, and our citizens have good reason to feel proud of the achievements in the floral line this season. The Mrs. Beasley geraniums still retain all their beauty and wealth of bloom and commend themselves to every lover of flowers in and out of the trade as an excellent bedding variety. They are the best pink we have seen.

A visit to the principal growers about town reveals a large increase over former years in the number of roses planted, the usual number of carnations and chrysanthemums and a very perceptible decrease in the number of bulbs planted of all kinds. Even that old favorite, Harrisii, seems to have been discarded by many.

Chris Hansen's roses are in good shape and are now in crop. He is cutting about a thousand daily and finds a ready market for them. Some few spots of mildew were seen but he has checked it and with steady night firing there is but little danger of damage from that source. E. F. Lemke is also cutting a nice lot of roses. His son is now manager of the floral department at Donaldson's Glass Block in Minneapolis.

L. L. May & Co.'s houses, as usual, are looking well. Their stock of roses, carnations and mums is looking exceptionally fine. They are putting in the usual number of bulbs, Harrisii, Romans, narcissus, tulips, hyacinths, etc. Their new houses are now completed, giving them 7,000 more feet of glass. They are planted to roses and carnations, are built with the short span to the south and are model houses in every detail. A cheap, light and

practical sash lift is used, quite unique and the first of the kind we have seen in the city. If it continues to work as well as it now does and is durable its value is assured.

The annual meeting of the Minnesota Florists' Society was held in this city on the 13th inst., Pres. Malmquist occupying the chair. The following were elected officers for the coming year: President, James Souden, St. Paul; vice-president, E. Nagel, Minneapolis; secretary, Robert A. Currie, St. Paul; treasurer, R. S. Wessling, Minneapolis; executive committee, L. G. Venzke, A. S. Swanson, of St. Paul, G. Malmquist of Minneapolis. The by-laws in regard to membership fees and dues were suspended and all florists in the state invited to become members of the association. The secretary was instructed to call a special meeting for one month hence. The attendance was not large but all present were enthusiastic over the prospect of a good strong society being formed and monthly meetings being held the coming winter. The subject for discussion next meeting is the advisability of using oil for fuel. The retiring secretary, A. S. Swanson, has been a hard worker for the success of the society and much is due to his efforts. The new officers are all well known enthusiastic growers and with co-operation on the part of the members should make the state association a power in florist circles. FELIX.

PEWAUKEE, Wis.—Mr. George Pepper, the nurseryman, died at his home here September 11 aged 73 years. Mr. Pepper was born in Bavaria in 1821 and emigrated with his parents in 1835. He reached Milwaukee in 1841 and in 1842 came to Pewaukee.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

" " 3 1/2-inch, strong..... 6c

MCCREA & COLE, Battle Creek, Mich.

PANSIES...

Every Florist Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Have any quantity of fine plants ready now. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. A Liberal discount will be allowed on large orders.

ALBERT M. HERR, L. B. 496, Lancaster, Pa.

CARNATIONS★PANSIES

FLORIST,
 111 WEST 30TH STREET,
NEW YORK CITY.
 Established 1879.

Mechanic Falls, Me.

A very severe hail storm passed through this section September 5 at 5 p. m., doing a great amount of damage to farm crops and fruit. Hail stones weighing two and three ounces and measuring 2 1/4 inches in diameter were about the average size. Glass in dwelling houses was broken, apples stripped from the trees and plants of all kinds were nearly ruined. My loss on glass in greenhouses was 3,500 lights, 10x12 double and single thick. Seven hundred carnations out of doors were very badly damaged. My loss on plants and damage on glass will be about \$200. Geo. M. Roak of Auburn, Me., had 2,000 lights of glass broken, slight damage to plants. Scribner of Lewiston, Me., lost 1,100 lights.

To show the size and force of the hail stones a new corrugated steel roof on the machine shop is dented as though it had been pounded with a hammer.

W. F. MILLIKEN.

Houston, Texas.

Trade has been dull all the summer, but not quite so bad as last year. Things are beginning to look better, and the prospect for the fall and winter trade is good.

W. M. Bamberge, who has been in business on St. Charles street, is selling out and is going to Honduras, C. A., to collect orchids for some northern houses.

Wm. Kutschbatch has changed one of his houses into a "paper house," making the top and sides entirely of the new German substitute for glass.

The firm of Mrs. N. E. Westgate & Son is dissolved. Mrs. Westgate will continue the retail plant and cut flower business, and W. W. Westgate will take the wholesale part, wild smilax, evergreens and native plants; he is also starting a market garden a few miles outside the city.

M. V. Wright is building another large house.

WE LEARN from the John C. Moninger Co., of Chicago, manufacturers of greenhouse building material, that during the past season, in spite of the dull times, their business has considerably exceeded that of the previous year. This certainly shows faith in the future by a large number in the trade, and it is significant that of the many new houses reported in our news columns the great majority are additions to existing establishments and not new ventures.

IN THE advertisement of Mr. Edwin Lonsdale in our issue of September 8 the offer of field grown plants of Helen Keller carnation at \$3.00 per 100 was an error due to a slip of the pen in preparing the copy. The rate should have been \$3 00 per dozen, as it now appears in the adv.

Toronto.

Now that the big fair is over business is resuming its usual dullness; there are plenty of cut flowers of all seasonable kinds coming in, but I am afraid the demand is scarcely equal to the supply, though two or three stores report fair sales.

Now for the chrysanthemum show. The combined executive and chrysanthemum committees of the G. and F. Association will meet on the 24th inst. to arrange the final prize list and to discuss various other matters concerning the running of the show.

At the regular meeting of the association last week Mr. W. Lawrence, gardener and instructor at the Industrial School for boys, was present and gave an explanation as to what the school was doing in the florist line of business. At present there appears to have been very little harm done to anybody and a good deal of the trouble seems to have been caused by misunderstandings on both sides. Mr. Lawrence says it is to his interest to get the highest prices possible for goodsold. The committee appointed to consider the matter will report at the next meeting and it is to be hoped will make some recommendation so that a settlement may be arrived at. It is scarcely fair to Mr. Lawrence to keep a sword hanging over his head. In the absence of the president Mr. W. Muston handled the gavel with great circumspection and good sense. Some of the boys are anxiously awaiting a report from the committee to consider the advisability of starting a florists' section of the association. The holidays are over, the busy time is coming on, now is the time to meet and talk the matter over.

Mr. E. V. Low of the Clapton (Eng.) Nurseries, was in town last week. E.

New, Rare and Beautiful Plants

Baltimore.

With the advent of the first cool nights hope springs anew in every florist's heart, and every unnecessary bud he picks off his "mums" seems to bring him appreciably nearer to the "good time coming." True, very good buds may still be had at two or three cents, and snap lots at one, but they sell at that; a little while ago they didn't sell at anything, at least the most of them didn't, while now one can actually count three customers waiting in the Exchange at once sometimes, and orders on the books besides.

Speaking of the Exchange reminds us that "another Richmond's in the field," and there will probably be a brisk little battle for the "wholesale exclusively" trade between the "Ex." and Mr. J. G. Rodgers, who opens October 1 at number 117 Park avenue, as a wholesale commission florist. This is the third wholesale commission place started in town exclusive of the exchange. The first was Messrs. Perry & Dungan on Madison avenue near Biddle street; the second Mr. J. J. Perry, corner Park avenue and Fayette street. We trust the third time will charm in this case, and that Mr. Rodgers will succeed where the others failed. The city is larger for one thing, and the number of growers increases every year; besides it is a question whether a properly supported commission house would not have paid for the first.

The club did a wise thing at the last meeting in selling the booths at the coming chrysanthemum show by auction. The prices brought were not remarkable; possibly more money could have been made by selling at private sale, but is it not worth a great deal to have silenced the annual complaining and grumbling for once? The auction sale created quite a diversion, and the meeting was still further enlivened by a very practical and thorough essay on "Forming and planting lawns" by Mr. N. F. Flitton.

There will be two shows again this year, as Mr. Jno. Donn expects to exhibit his customary crop of beautifully grown monster plants at a hall in town, probably "Lehman's," from November 6 to 9 inclusive.

We had a slight attack of the Mount confidence game, only one victim showing up so far, a florist on Eutaw street, who was swindled out of two dollars by the check operation. The young man who is doing the trade must get more than we hear of, or else he will soon stop from a lack of funds.

Mr. I. H. Moss is putting up a large residence. Rumor has it that he is preparing a fine cage for a fine bird. The hachelors hereabouts have a bad attack of it this year.

Mr. Wm. Fraser has a seedling canna dwarf as Crozy, free as Crozy and larger flower, which is really as much of a prize as he thinks it.

Mr. John C. Lewis, who has an interest in Brackenridge & Co.'s Rosebank place, is in full charge there, and is showing the boys how they do it in Philadelphia.

Worcester, Mass.:

From now until the chrysanthemum show, November 13, 14 and 15, the weekly schedule of the horticultural society is devoted mostly to fruit and vegetables, with only one or two calls for cut flowers to help make the hall attractive. Stand and basket of cut flowers and display of asters (not to exceed forty vases) was called for September 20, and although the schedule was a short one a very good display was made. The following premiums were awarded: Asters, first F. A. Blake, second Ed Hall; basket (amateur), first F. A. Blake, second Mrs. E. C. Brooks; basket (florist), first Thos. Ward, second H. B. Watts; cut flowers, stand, first A. A. Hixon, second F. A. Blake.

Most of the flower buying public have returned for the winter, and there is a slight improvement in trade. The long monotony of doing nothing in the decoration business has at last been broken this week; Lange put in a handsome decoration and transformed the leading millinery house in this city into a bower of tropical luxuriance and floral exuberance, as the newspapers put it, and there are several good wedding jobs in the near future. While we are not wasting as many good flowers as we were a month ago good quality stuff is plentiful; funeral trade is good. SEEDLING.

Des Moines, Iowa.

The worst storm of hail and rain combined that ever visited Des Moines passed over about 3 p. m. Thursday, September 20, doing more or less damage to greenhouses, skylights and windows.

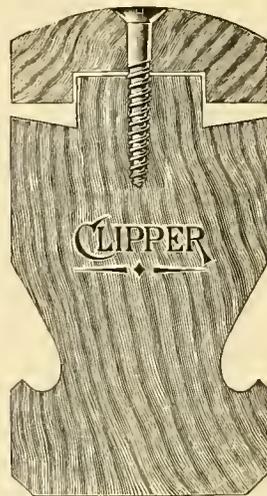

Hail stones as large as door knobs fell to the depth of several inches, followed by a heavy downpour of rain, which added to the already great destruction in the greenhouses.

The florists in the western part of the city appeared to be in the center of the storm, as there the destruction was most complete.

W. L. Morris lost 6,500 feet of glass and a large number of plants damaged by broken glass. He estimates his loss at \$1,000; partially insured. Peter Lambert lost 2,000 feet of glass and all his stock more or less damaged; no insurance. A. Anderson lost about 1,000 feet of glass; no insurance.

Several private places were completely wrecked and other commercial places suffered more or less severely.

W. L. MORRIS.

“Proof of the Pudding”

LEXINGTON, KY., June 4, 1894.

LOCKLAND LUMBER CO. Gentlemen:—The lumber received from you was to build a house 100x20, but instead it is now 104x21½ with plenty of pitch of the roof, ¾ span. I am more than satisfied with the good material you furnished me. Respectfully, JOHN A. KELLER.

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipfle Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitswerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SAN FRANCISCO.—Mr. and Mrs. H. Neuberger are soon expected home from Germany, having arrived in New York September 29.

ATLANTA, GA.—A flower show will be held here October 31 to November 2 under the auspices of the Woman's Board of Managers of the Cotton States and International Exposition. Chrysanthemums will be the main feature, though prizes are offered for other flowers and plants in variety.

Chrysanthemum Notes.

Pick—pick—pick, pick off the sideshoots and buds. This is the principal work of the chrysanthemum grower at this time, and a tedious job it is, for it hardly seems that one can get them all picked off. Yet it must be done carefully and diligently, for the buds that are retained at the tip of the shoots, from which so much is expected, must have all the strength of the plant and receive all the benefit of the liquid manure that is given to properly develop them. Be very careful in picking out these buds and side growths, especially in the early morning, for the flower stalks and stems are very brittle at that hour and easily broken off, and many a grower, after having reached over the first row to disbud a plant at the back of the bench, has found, to his sorrow, that in so doing he has broken off a large bud that promised an exceptionally fine bloom, and one that he has exultantly watched for the last two or three weeks, thinking that he surely had a prize winner, now to find his hopes dashed to the ground by one careless movement of the hand or arm.

Keep up the liquid manuring and make the solution a little stronger. You may have the best plants and largest buds now in your vicinity, but it is four weeks and over to the shows and it doesn't pay to count your chickens before they are hatched, so keep up your best efforts or your competitor may yet get ahead of you. If you are using nitrate of soda or potash continue it until the flower begins to develop. A little sulphate of ammonia will now make the buds more rapidly, but use only a very weak solution.

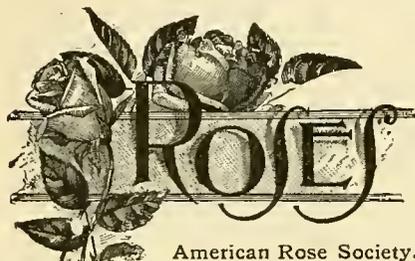

If there are any aphids on the plants now go for them red hot, smoke often and if that does not rid the plants of the pest smoke heavier, only be sure, if you have to smoke heavily, that the plants are fairly wet before doing so, for if they are in a dry condition you are very apt to burn or scorch the foliage, and a flower with scorched foliage no matter how fine the bloom may be is practically worthless for either commercial or exhibition purposes. If the mornings are pleasant and bright after smoking give the plants a good syringing, for this will not only help to keep down the aphids, but will improve the plants, and a light syringing occasionally on any pleasant morning

will help the foliage and growth, even if you are not fumigating. But on no account do this on dark lowering mornings, or after the bud has burst its calyx, for in the former case the water will remain too long on the bud and chill it, and in the latter work its way into the center of the flower and may discolor it. Again, let us impress on your mind the necessity of keeping the blooms well tied up, for the sap flows quicker and consequently they will absorb the liquid manure much easier than if allowed to bend over and the stem grow crooked, besides detracting from the attractiveness and value of the flower.

We received the other day an inquiry as follows: "Will you please give us some idea as to what we should charge for chrysanthemum plants in bloom in different sized pots." At first this looked like a very difficult question to answer comprehensively, for in the first place some growers have plants that are plants, and others plants that are—well, scarecrows is as good a word as any, and then again some will pot a plant in an 8-inch pot that others would grow in a 6-inch. So not knowing what the inquirer's plants are we may not perhaps be able to make our answer satisfactory, but we hope that they are of the best class and will act accordingly. Another thing that will have some bearing on the question is the competition that one has, but we are firmly of the belief that any good product is always worth what can be obtained for it, so we place our prices according to our situation. But we will try and place a fair valuation on good plants, such as we have seen placed on the market. A plant grown in a 6-inch pot bearing six to ten good flowers well disbudded and with fine clean foliage nearly to the pot ought to bring the grower at least a dollar, and if not disbudded 75 cents. A plant in a 7-inch pot in good condition as above, carrying twelve to fifteen flowers one dollar and a half or three quarters, and not disbudded a dollar or a dollar and a quarter, and if the foliage is not clean less. A plant in an 8-inch pot in fine condition with twenty good blooms should bring the grower two dollars and a half and a dollar and a half or three quarters if grown to sprays or if the foliage is poor. These are retail prices in good competition, and are for good bushy plants, well grown and neatly tied up, and not over two feet and a half high. If the plants have been allowed to shift for themselves during the summer and now stand from three to four feet high, bearing a small head of tangled up, insignificant flowers, at the end of long stems denuded of foliage, tied closely together, round about, with a white cotton string to three or four thick rough sticks, the grower had better take up with any offer he can get, not trying very hard to get the highest market price, and make up

his mind that he will grow better plants next year. As we said before the price will vary very much, as to locality and competition, but we believe that plants can be grown at these prices, and give the grower a fair remuneration for the labor that has been spent upon them. We have not placed any value on plants in larger than 8-inch pots, for when we come to take into consideration the cost of growing and tying up first-class plants in 10 or 12-inch pots, and then add on a fair profit, the ordinary customer would be scared at the price that would have to be asked and wonder if you were not trying to set a price on the whole crop.

ELIJAH A. WOOD.

What a National Rose Society can accomplish is greater than any of us can foresee at this time, but I have given this subject considerable thought and the following are a few of the points such a society can (if funds are forthcoming, which means if we can get liberal patronage) take hold of with great advantage to the entire trade of this continent.

Since the Carnation Society was established no one can deny the advancement of that flower has been greater, and a much greater improvement not only in the flower itself but in almost everything appertaining to it, than had been in twenty years before, and the ground is only just broken as yet. Five years hence will see wonderful results of this work, if I am not greatly mistaken. With such results as these with the carnations what is there not in the future for the "Queen of Flowers" which everyone must admit has a far wider scope than its companion, beautiful as the "Divine Flower" may be.

First, the establishment of a tribunal to examine and award medals, certificates, or diplomas as deserved of all improved new varieties of American origin, so that the possession of such awards may be an absolute guarantee that the variety possesses the qualities claimed for it. The wording of such awards should cover all and every point of merit and give also the weak points where such exist. This would be a great boon to everyone who ever buys a new rose.

Second, diseases and remedies. Here is a subject which, if treated rightly and carried out fully as it deserves to be, would be of untold value to everyone engaged in growing roses, and within itself should be an inducement for everyone to join the National Rose Society and in that case there would be ample means of carrying out a system of experiments under the most skillful management to be found in the country whereby all diseases could be traced to their foundations and the right remedies for preventing them found. Now, while this looks like a big job yet I am convinced it can be done with united action; and as every year or two something new presents itself in this line it will make it all the more necessary to get the machinery in motion as early as possible. Will you not help us?

Third, fertilizers, how best to apply, when to do so and the kinds most suitable

and their relative value. We have had from time to time able and very valuable articles on this subject but I think there is ample room for an abundant amount of information which will be of great value to us all on this subject, conducted, as it should be, on a strictly practical and scientific basis, covering, as it should, the different classes of soils and what they are deficient in or of what they have a surplus of as related to plant life and their fullest possible development.

Fourth, testing all new varieties of foreign origin. This would be a great saving to all our importers in money outlay, and save the buyers after from spending a great deal of money uselessly, and a great deal of annoyance which they so often experience. As the matter stands now glowing descriptions and greenbacks exchange places very frequently and the party getting the greenbacks has all the glory there is in the bargain. Is this a fair trade? I think not, neither do my brother members of the A. R. S., therefore the quicker we can make it easy to get a fair deal the better for all interested.

Fifth, rose exhibitions. To disseminate a wider knowledge and love for this flower a system of exhibitions to be held over the entire continent can be established on such a basis that every class of roses shall be represented at them, the same to be exhibited in various ways, such as cut flowers, pot grown, both large and small sizes, trained and grown naturally so as to show their adaptability for different purposes. For judging at all such exhibitions a code of rules can be laid down from which no deviation should be allowed; this would give everyone an equal footing, whether amateur or florist, large or small grower, and in a very short time raise the standard of the rose and the business of the florist to a much higher plane than they have at present.

The above are only a few of the points wherein the R. S. of A. can do good. If my readers will only think as the charter members do its success is assured. The above items point to an experimental station which should certainly be established at the earliest date possible but it cannot be done without liberal support from all parties interested, and who that loves flowers or grows them for profit is not deeply interested?

This society was re-organized at Atlantic City last August and the officers elected were Robt. Craig, Phila., President; John H. Taylor, Bayside, L. I., Vice-President; H. B. Beatty, Oil City, Pa., Secretary, and for Treasurer.

Yours truly, JOHN N. MAY.
Summit, N. J.

A New "Scale."

A subscriber recently sent us a rose twig covered with what seemed to be a formidable new form of scale. We submitted the specimen to the Government Entomologist at Washington and append the reply received.

In the absence of Mr. Howard I beg to acknowledge the receipt of your letter of 17 instant, transmitting a portion of a rose plant with supposed new scale insect on the stem. The supposed new scale proves to be the eggs of one of the green-winged locusts or katydids (*Microcentrum retinervis*) and certainly sufficiently resembles scales to be easily mistaken for them by a non-expert. These eggs are deposited by the female cricket on any small twig and do very little damage except in the case of very tender twigs where they may prevent the normal growth.

They are so rare, however, as to be of no serious moment. C. L. MARLATT.
Acting Entomologist.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Mr. Herr Says Adieu.

It is now about a year that I have been talking carnations to you. We have come around to the starting point again, and it is well to have others give their experience in a different soil and with different treatment from mine.

I hope you have learned something from me the past year that will be of practical value to you. I also want to beg your pardon for the shortcomings, which in a glance over the articles I find are many indeed.

We can not recall the past, but we can learn a lesson from it for the future, and let all of us who love carnations unite in placing them still higher on the pinnacle of fame. The possibilities of the future for carnations are many and we should use all our care and attention to attain those possibilities.

ALBERT M. HERR.

Carnation Notes.

"Why do you water your carnations on such a day as this? Do you not know that the wind is blowing a gale from the northwest and it is beginning to rain? Why, Charlie, it will ruin your plants; if the soil is a little dry I would leave it until to-morrow." These remarks were made to me by one who has been growing carnations since he was a boy, and that was over forty years ago. He seldom, if ever, produces a flower over two inches diameter, and he is satisfied with stems one foot long. My answer to him was "go through my houses and find a plant suffering from overwatering, and then come back to me and report."

"Well, how are they?"

"All right as far as I can see."

"Now, old friend, I will ask you a few questions. Does the sun shine when it is raining? Do plants of any kind make long stems and large flowers outside if there is no rain and the soil becomes dry? Well, it is just the same inside. Never allow the soil to become dry or in a powdery condition if you wish A1 flowers. You question the advisability of my watering to-day. Is not the mercury standing at 65° outside? Is not the wind blowing through these houses sufficient to dry the foliage in the two houses? Well, when these are the facts you can water your carnations as much as you wish and the plants wish for and need a great amount of water when the weather is as warm as we have had since planting inside. Of course you can get the soil too wet, but if the bottom boards to your benches are one-half inch apart the surplus water will run off unless you stand by a bench and water it all day long."

"How about manure water?"

PLANTING AT THE EXPOSITION OF 1894 AT LYONS, FRANCE.

"Well, I am sorry to say that my water system is such that I am obliged to pump it from a barrel, but next season I will have it so arranged that I can give the plants a very little every time they are watered; this I believe is the best plan, as the plant can assimilate the food much better if applied in small quantities. We use one pound nitrate of soda to fifty gallons water, one peck sheep manure or one peck fresh cow manure to the same quantity water once a week, alternating the above mixtures, thus bringing each mixture three weeks apart. We also use sheep manure as a top dressing; this keeps the surface of the soil loose, thus doing away with the necessity of loosening the soil, for the carnation roots run right up to the surface, and it is unwise to disturb them." CHARLES H. ALLEN.

Florists' Work Outdoors.

There is a large number of florists all over this country who do other work than greenhouse work, and work of the very highest importance too in a gardening sense, yet nobody seems to pay much attention to them, because it is regarded as jobbing gardening, and so it is, but how cumulative its results are, and how telling they might be, perhaps but few even among the florists have considered. I am disposed to believe that hundreds of florists might do a great deal this very month to popularize their art if they would, and that too at comparatively small cost to their clients.

Now is the time for them to persuade their customers to prepare a good bulb bed or two. Tulips, hyacinths, narcissus, fritillarias, irises, lilies, snowdrops, cro-

cuses, etc., should be got into a good bed of soil as soon as they can be had, and if the soil of the bed is not good enough try if you can't sell a cart-load or two of good sound sod soil, for there is nothing better than such as you use for growing your own bulbs in. If planted at once in good soil they will make their roots before the soil is too cold, and of course bloom splendidly.

Most of the herbaceous plants also should now be divided and overhauled where necessary—in fact far north it is getting full late for the work, but southward it can well be done all through October.

There are a good many very pretty things which may be used to carpet the bulb bed with other than pansies and daisies. For instance, *Polemonium cœruleum variegatum* planted between yellow *Pottebakker* tulips makes a superb changeable bed in some sections. Such a bed may have an edging of any variety of *Iris pumila*, which the observation and experience of the florist has shown him to be in flower with either the *polemonium* or the tulip. Again, pink tulips may be intersected with the white varieties of *Phlox subulata*, and edged with *Viola pedata*. In this case experience of the average season of bloom will be necessary, for the pink and purple together are hardly desirable, but if your soil and situation happens to bring the tulips in flower first, and the carpeting plants in succession the white and purple will be beautiful. If the bloom is simultaneous it would be better to use the white variety of the violet.

Besides a special spring bed or two very

many opportunities exist for the florist to recommend plants for the borders and supply them, especially to such of his customers as leave home in the summer and care but little whether the geraniums flower or not. There are various hardy anemones, *ranunculus* and *trollius*. *Adonis vernalis* is but rarely seen. *Cheiranthus alpinus*, *arabis*, *aubretia*, *alysum* and *iberis*, with *Viola pedata* in its better varieties, are but little used. *Saponaria ocymoides*, *Silene pennsylvanica* and *Claytonia virginica*—how many florists have thought of using them to heighten the pleasures of their customers who are at home in May, but in Europe when the geraniums bloom?

Then how many city lots are there where the introduction of a few clumps of the modest bluet, *Houstonia cœrulea*, would give untold delight and perhaps surprise. For a patch of orange yellow in the vicinity try another native plant, *Senecio aurea*; it will do either in a moist or dry spot. *Epigæa repens*, the May-flower, is not so easy to transplant, but some herbaceous men keep it in pots, and for those who will invest it will be almost a triumph to show it in a garden. *Primulas*, *polyanthus* and *dodecatheons* are almost as rare. They do better under the snows of the north and the cool summers of the lake country, than further south, where they require the shade of a small tree, mulching summer and winter, and plenty of water, under such conditions they endure well.

How seldom we see *Gentiana acaulis*, or *G. verna*! With the tariff entirely removed they are worth importing every year, so beautiful are they; but in some of

the mountain regions they may perhaps find themselves quite at home. Phlox, polemonium, Pulmonaria cœrulea, Mertensia virginica, myosotis and Onosma tauricum where it will succeed, what a group of beauties are they!

I don't believe I have ever seen a florist make the least use of *Lamium maculatum* and its variety album. I venture to say a good bed of them, either in zones of color or in intersection would cause lots of inquiry. They are never seen beyond the cottage garden, or hardly ever. *Ajugas* again are but seldom seen. *Daphne Cneorum* may be planted also at this season, and those who once know it will talk of its beauty and perfume to all their friends. There are very many bulbous and rhizomatous plants which may receive attention as soon as possible. They may be planted in the grass, in the borders, or in the bare spots on the south side of shrub groups, sometimes being helped along with a barrowful of good soil, in place of a barrowful of bad soil dug out. *Leucocjum*, *allium*, *muscari*, *Bulbocodium vernum* and *trilliums* are but rarely seen in town gardens. Nearly all may be planted now.

Trenton, N. J. JAMES MACPHERSON.

A Reduced List of Sweet Peas.

It will be an advantage all round, for grower, seedsman and floral public to, as soon as practicable, drop from the list of sweet peas nearly a score of varieties. This may be a startling announcement for the majority of seed houses, for I would throw out as no longer worthy to hold rank among modern sweet peas almost the entire list that some reputable houses have had in stock up to date. I do not mean to say this purging of the list can be carried into effect all at once. When the 1894 crop is all in there will be a good many tons of seed of the varieties we must begin to think of dropping, and that seed is already contracted for, and will be distributed among the trade for this winter's stock. It is time to sound the note of warning. The California growers will probably begin to plant this fall as early as October, and I feel confident they will be glad to discard the varieties I shall name, or at least will plant them only on special orders, and those special orders will come from such houses as are not posted. It is only an aggravation to the California growers to put in acres of the old unimproved sorts, for the mid-day sun there scalds and burns the standards of each blossom into an unrecognizable condition. The improved sorts are not affected that way. An acre of *Adonis* or *Crown Princess* of Prussia is an eyesore to the California grower. While the fertility of the blossoms is not affected, and they pod all right, yet who wants these old sorts when the same colors may be had in improved form, and when the growers are ready to substitute acres of *Miss Hunt* for *Adonis*, and acres of *Venus* for *Crown Princess* of Prussia?

Let me say I have just picked up at random the '94 catalogue of a very reputable house. Their list of sweet peas names seventeen varieties. Nine are given under the common head, and eight under the head of "Eckford's New Hybrid Large Flowering Sweet Peas." Of the first nine I consider four worthless, and of the eight others four of them are the very poorest Eckfords, and will be included in the cast-off list, while five of the eight are not at all large flowered. Actually that house was last season five years behind time on this flower.

I can see also that the English trade is tired of handling a list that is needlessly

cumbered with outgrown sorts. The growers are certainly ready to plant acres of improved varieties in the place of acres of the old ones. And since in a former article we have discussed the matter of growing the improved varieties it is time now to tell which may be discarded.

There are seven old sorts, which, when Mr. Eckford began his work on this flower eighteen years ago, were in existence. They are the Light Blue and Purple, Painted Lady, Common White, Scarlet, Scarlet Striped, Dark Striped and Black. I am pretty sure these are the original seven, although *Adonis*, *Crown Princess* of Prussia and *Common Purple* are in size and quality no improvement on them. And we must add to this class now *Vesuvius*, *Violet Queen*, and even such Eckfords as *The Queen* and *Queen* of England. About all the value the varieties thus far named have is that they are a good basis to hybridize or to develop from. These have either been left behind by improved sorts or have never had merit enough to commend them. And then there is no danger of losing these inferior sorts because they will persistently reappear in reverted stock of what will be grown for improved varieties. Every old distinct variety will last while time lasts. For instance in every stock of *Apple Blossom*, grown for quantity instead of quality, *Painted Lady*, its old original, will reappear, or at least a percentage of it will be half way reverted to the latter. A poorly grown stock of *Senator* will be found already to be little better than the old *Purple Brown Striped*. I saw several acres in California of what the growers had planted for *Purple Prince*, and it may have come from Eckford's true stock three years ago, but it was nothing but an inferior purple as I saw it.

There is some question still about dropping the old sorts. A very well informed English seedsman said to me, when I told him I should drop *Painted Lady* and let *Blanche Ferry* have the field, that we could not well do that just now, for unfortunately the California stock of *Blanche Ferry* is badly tintured at present with the blotched markings that have taken the name of *American Belle*. The English folks probably have pure *Painted Lady*. But it takes nearly twenty-five tons of *Blanche Ferry* to supply the trade. It has practically driven *Painted Lady* out. We shall get our *Blanche Ferry* down true again, and who will want the old weaker pink and white then? The *Nellie Jaynes* I have tried again this year with more satisfaction. It is simply an improved strain of *Painted Lady*, and will supply for those who love the old original the modest pink and white in pure stock and somewhat improved form.

That gentleman from England also questioned whether *Crown Princess* of Prussia could be dropped. I think the only question is whether our growers can now supply us with *Venus*. And certainly in another year the quantity and cost of the latter can be made to meet all demands. There may be a little question about dropping *Adonis*. It is just a shade different from *Miss Hunt*, but that shade is in the latter's favor, while the *Adonis* is one of the smallest of all the old sorts.

Then the question of white varieties is a little troublesome. It stands just like this: *Queen* of England is very ordinary, hardly distinguishable from the commonest old white; *Emily Henderson* plays an unaccountable trick about not germinating well, and I hear complaint about its reverting, quite a percentage to *Blanche Ferry*. Personally I have great

faith in its riding clear of all these erratic traits, and leading the field of white seeded whites. I have heard no American amateur or florist dispute its excellent qualities after being brought into bloom. *Mrs. Sankey* is a noble white. Its pink blood betrays it occasionally. Eckford's new *Blanche Burpee* is now ready, I believe, to make its American debut, and to challenge all whites. I saw a stock of *Alba Magnifica* in California that pleased me. It had a good deal of the *Emily Henderson*'s stocky character. I do not believe the public will pay a novelty price for *Emily Henderson* again. Europe will doubtless send us considerable white seed, and since the German houses send largely under names describing color, they probably would not bother about calling white *Queen* of England even though it came from Eckford stock. But we have got to unburden our list at that end, and it is to be hoped that both the names *Common White* and *Queen* of England will soon disappear.

I probably shall not be thanked by Messrs. Laxton of England for putting *Vesuvius* on the discarded list. But no florist counts it of any value. And *Carmen Sylva* will also have to follow suit. The other Laxton varieties are less objectionable, but by no means approach Eckford's novelties.

One Boston house is ambitious to swell the list of sweet peas. Their latest is *Harvard*, but there is just as much reason for calling Eckford's *Captain of the Blues Yale* as to call his *Cardinal Harvard*.

Then such Eckford varieties as *Empress of India*, *Isa Eckford*, *The Queen* and *Bronze Prince* have so completely been left behind by later work that they are very inferior. And we shall soon have to say the same of others. All this implies that we have a splendid list left which should not be degraded by these inferior sorts. I would therefore begin to plan at once to drop the following varieties: *Adonis*, *Black*, *Bronze Prince*, *Carmen Sylva*, *Crown Princess* of Prussia, *Empress of India*, *Isa Eckford*, *Light Blue* and *Purple*, *Painted Lady*, *Purple*, *Purple Brown Striped*, *Queen* of England, *Scarlet Invincible*, *Scarlet Striped*, *The Queen*, *Vesuvius*, *Common White*. I would let some others remain a year or two longer, but more will soon have to go. Even such a fine variety as *Boreatton* will have to go as soon as we get stock enough of *Stanley*. And I have passed over *Duchess of Edinburgh*, *Imperial Blue*, *Indigo King*, *Primrose*, *Carmine Invincible*, and others that have had their places more than made good. And with all these put on the retired list there will still be fifty sorts, most of them grand, and a monument to the patience and skill of Mr. Eckford.

Let us see just "where we are at" now in sweet peas. Six or seven new Eckfords will be offered this year to the trade: *Eliza Eckford*, a rose flaked and striped; *Duke of York*; *Duchess of York*, the latter a pink purple stripe on white ground; *Mrs. Chamberlain*, another reddish stripe; *Meteor*, an orange salmon; *Novelty*, orange scarlet. *Blanche Burpee*, the new white, I believe is ready. *Britannia* is another English variety just out, a development of the blue and purple. The growers must have these at the introduction price to start their stock, and a few "cranks" like myself must "keep up with the procession." Last year's novelties I find hear much higher praise than I have given them. *Lady Beaconsfield*, *Lady Penzance*, *Ovid*, *Peach Blossom*, *Royal Robe* and *Stanley*. If our growers will hold them up in size, substance and form

A GLIMPSE OF THE FLOWER MARKET OF PARIS, FRANCE.

at what Eckford has made them, the permanency of the new sweet pea popularity is assured. Only a few houses will list these this year, and they can be had only by the ounce at most, but that will be an improvement on sealed packets of ten seeds each.

On the 1893 novelties we are ready for business. Every reputable house should have them this year, and the growers should plan their next stock of them on a liberal scale. They are very fine—Blushing Beauty, Duke of Clarence, Emily Eckford, Firefly, Gaiety and Venus. I sincerely hope every grower will put an intelligent man on to these, a man with

the enthusiasm of a specialist. Mark the finest plants for seed stock. Better still I would plant seed stock by itself and give it the highest culture, give the vines support, and give heed to that simple fact that a vine overloaded with pods will necessarily produce deteriorated stock. My English friend said he would give the sweet pea fad three years longer to run. But that all depends on whether the Eckford novelties brought out in the last three years are held up by the growers at their best. The 1892 novelties were led by that magnificent flower Mrs. Eckford, with Her Majesty, Dorothy Tennant, Lemon Queen, Ignea and Waverly;

it was then Mr. Eckford struck the high mark which he is holding well. I will not answer for the seed that was sent out last spring under any of these names. I simply know that true seed of them all has produced under my eyes flowers of rarest merit. Our growers should supply the market with them, and the grower that grows for quality will in three years command the market at a price that pays him for all special labor.

Our growers should also give us a liberal supply of the following well tried Eckfords: Apple Blossom, Boreatton (until Stanley takes its place), Captain of the Blues, Countess of Radnor, New

Lottie Eckford, Miss Hunt, Monarch, Mrs. Gladstone, Mrs. Sankey, Orange Prince, Princess of Wales, Princess Victoria, Senator and Splendour. The following Eckfords are the least desirable: Bronze Prince (dropped), Cardinal (must give way to Firefly), Delight (of little merit), Duchess of Edinburgh (inferior to Princess Victoria), Empress of India (worthless beside Blanche Ferry), Imperial Blue and Indigo King (equal in size and both now inferior), Isa Eckford (must yield to Peach Blossom), Primrose (Mrs. Eckford should have the field), Purple Prince (not sufficiently distinct), Queen of England (very inferior), The Queen (dullest of all Eckfords).

Of the other old English sorts the following are valuable: Butterfly, Captain Clarke, Fairy Queen, Princess Beatrice, Queen of the Isles and Violet Queen(?). Laxton's Princess May has spoken well for itself this year. Etna, Madam Carnot and Rising Sun deserve further trial. The German Bronze King is somewhat interesting with its coppery standard and ivory white wings.

When anyone says to me the sweet pea is having only a short lived run I answer, we are but just getting to a healthy interest in it. We are only just ready to put the last three years' novelties into everybody's hands, and I am willing to risk the permanent popularity of the new sweet pea on a dozen of the latest sorts.

W. T. HUTCHINS.

Winter Flowers.

There are a great many plants which are very useful for the purposes of the general florist, and yet not suited to the exactions of the market grower. There are a great many plants which a lady will buy at sight, which would not pay the wholesale grower at all. Begonias are among these. I would not myself grow a stock of many of them, but as their cultivation is similar, there can be no harm in carrying quite a collection, limiting the number of each variety to a very few plants. If they are nicely grown and flowered they are salable.

Clitoria mexicana and *C. Plumierii* may be got into flower in 6-inch pots with a few sticks to climb on, a plant or two would certainly find customers. *Curcuma Roscoeana* again is another plant scarcely ever seen, but certain to attract attention.

Strobilanthes glomeratus, *S. anisophyllus*, *S. isophyllus*, and the variegated *S. Dyerianus* recently brought to notice, belong to a large genus very fully distributed through India and the Archipelago as far east as the Japan Islands. There are about 180 of them in herbaria at Kew and botanists have loaded them with endless synonyms. There are many mountain species, mostly blue flowered, and those mentioned do well planted out, and lifted for winter bloom. Cuttings should not be taken too early however, or the plants will become too large, they are of little use for cutting. *S. Dyerianus* may possibly be of use as a bedder. It is a good grower outside.

Holmskioldia sanguinea is an exceedingly pretty thing, with which I once held up Sir Joseph Hooker. He "knew it perfectly—but—hum—can't think of it." His fellow traveller however, Dr. Thompson had it already on the tip of the tongue. *Linum trigynum* is becoming well known. *Scutellaria Mocineana* is something I don't often remember having seen. It comes in well as a winter bloomer. *Siphocampylos microstoma* again is entirely forgotten; I would not know where to find a plant if I wanted it

and I might also say the same about *S. bicolor*.

Among plants requiring but little less heat to bloom the abutilons have been handled by most florists. Like begonias I should not carry too many of a kind. There are a few of the South African aloes which are quite pretty in bloom in winter and they are good window plants, easily kept manageable in size by cuttings. *Crinum Mauritium* is a late flowerer, which is worth trying.

Ericas are being tried more than for some years past. *Archeriana*, *Bowiciana*, *cerinthoides*, *c. stricta*, *gracilis cernua*, *nigricans*, *Sebana rubra*, *taxifolia*, *vernix ovata*, and *verticillata major* are among my notes as October bloomers. Butericas should be touched with caution by novices. They are among the things that require very vigilant attention to detail. Fuchsias of the winter blooming varieties should not be forgotten.

Has anyone seen a plant of *Lobelia coelestis* in this country, or is it in cultivation?

Mesembryanthemum and *oxalis* both give large numbers of fall blooming species, some of which are found in greenhouses, but rarely brought out at their best. I would like to know what is the matter with the various *rhapiolepis*? I have not seen one in years.

Sanseveira guineensis is liked I find by some as a window plant. It may be had in flower during October. Perhaps the very best neglected plant of any of these is *Schizostylis coccineus*. Seed sown in March, pricked several together in small pots as soon as up, and planted out at bedding time, will flower finely by the next autumn. I think it would take better than tulips.

Tropaeolum azureum is probably too troublesome a subject for the average florist. I have seen it and tricolorum, etc., well done in the northern sections of the country however.

Trenton, N. J. JAMES MACPHERSON.

The Forcing of Hardy Plants.

[Read before the Gardeners' and Florists' Club of Boston, by Charles J. Dawson, October 2, 1894.]

The subject which I have selected though in a comparatively primitive state, has become quite important the last few years. Such plants as Dutch bulbs, hybrid perpetual roses, deutzias, lilacs and the like have been a prominent set of plants, grown for winter flowering for years past, but outside of these few things hardy plants for forcing have had a very narrow scope.

From Christmas until spring opens the private gardener usually seeks to have something odd or rare in bloom to please his employer; and so it is with the energetic retail florists of the large cities; they endeavor to have something out of the ordinary run of greenhouse flowers to please their rather eccentric customers. It is this call for flowers, outside of the regular line of florists' flowers, as roses, carnations and violets, with the ever changing fashions in flowers, which requires something new or strange, which makes it desirable that florists and gardeners should turn their attention to the forcing of hardy plants, many of which are very easy to handle, but if handled with care will keep as well as many of our regular greenhouse plants. Few florists have attempted to force hardy plants and fewer probably have any knowledge of what might be forced; their time having been devoted to that class of plants which the general market demanded. The gardeners of private estates have a better knowledge of these plants, and it is to

these men that the horticultural world should look for advice in such matters.

In regard to the commercial part, I can not say what the profit would be on forced plants, but in my mind there are many hardy plants, which are not commonly forced, which if proper attention were given to propagation and forcing, would prove as profitable as many other branches of the business. For instance, a few years ago my father had in bloom a week before Christmas a few most beautiful tidy plants in 8-inch pots of *Pyrus baccata* var., the ornamental flowering crab apple. Beautiful sprays of delicate pink apple blossoms a foot or so long might have been cut from these plants, or the plants might have been sold as pot plants at a good price. If the time were taken to work up a good stock of such plants as I shall mention I have very little doubt but what the grower would have found a ready market for his stock. While many of these hardy plants will force with little preparation others will require as much time as a great many tender plants, and yet it is all plain work.

The requirements for the successful carrying on of such work might be considered under five divisions, i. e.: first, knowledge of the plants; second, preparation and care before the cold weather sets in; third, protection before being brought into heat and proper houses for forcing; fourth, care and management while forcing; and fifth, the ripening of the plants, after the flowering season is over.

First: The knowledge of the plants is best learned by personal observation. It is a very good plan in the spring months to take a trip frequently to some well established nursery or arboretum, and note-book in hand, make a select list of those plants you think would be most desirable for this kind of work; and then, when the proper time comes secure small plants of those noted, well set with flower buds and give them a trial, and if successful the following season they can be tried on a larger scale. Familiarity with the habit of growth of the plant and the time of flowering will come in very useful. A good thing to remember is that it is almost entirely useless to try and force any plant for winter flowering that naturally blooms after the first of July. This is putting the time to the extreme limit, and it is much better to say the middle of June. The later the plant blooms naturally the longer it will take to force it, and it is entirely out of the question to give too long a time to these plants in the greenhouse, where the space is so valuable.

Of course there is a possibility of forcing those plants which bloom later than I have mentioned. Prof. Bailey of Cornell University, told me last March that at that time he had in his greenhouse some flourishing plants of some of our native asters and golden rod, which at this time were some two feet high and very healthy. His manner of treatment was this, some time during the early part of the fall of 1892 the plants were lifted, and as soon as the cold weather set in they were placed in a cold storage house where they remained during the year of 1893, treating them as lily of the valley. Then in January of 1894 they were brought into heat, with the results mentioned. Whether they continued to do well and flowered with success I do not know, but as you see, it certainly is not practical, but shows what can be done if occasion requires it.

Second: The preparation and care of the plants is a most important part of the work, and needs considerable fore-

thought. Sometimes it means two to four years, i. e., when one has to work up the stock of any special class of plants, which can not be obtained from the nursery, and again the nurseryman of to-day grows his stock chiefly for planting out purposes, and seldom gives it the little extra care which it should have to get the best possible forcing results. It might be well for some nurseryman to give special attention to the growing of popular forcing plants, or those that are to be popular. They would do well to try and copy the methods of some of the foreign (mostly German and French) growers. Good healthy young stock to start with, planted in carefully prepared soil, and let grow until proper size and shape and well set with flower buds, is what we want. Transplanting every season helps to keep the roots within limit for potting or boxing purposes. To be sure it would require from three to four years to obtain such results, but it would pay in the end, and when we come to think of it this same pains has to be taken with all our plants of any importance, as Indian azaleas and tender rhododendrons. Very pretty work, as mentioned above, is shown by the forcing shrubs which are imported annually, as lilacs, snowballs, Ghent and mollis azaleas and the like, and it seems reasonable that our own nurseryman could offer to the trade just such plants, if he would only give them the little extra care. I have mentioned this extra pains to be taken when one is looking for the best results, but you can get good results and good returns by selecting the plants right out of the garden, nursery or woods in the fall, care being taken to select sizable flowering plants.

One of the best forcing shrubs is our Mountain Laurel (*Kalmia latifolia*) and usually my plants forced have been dug up in the early fall from their native ground. Generally speaking, I usually turn my attention towards the preparation of those plants I wish to force early in October, or as soon as the tender plants are well cared for and in their winter quarters. If you can commence to pot late in September or early in October a good root growth is usually obtained before it is time to place them in storage place. This is an essential point, as you can then commence to feed with stimulants soon after they are brought into heat. In regard to potting, use a good compost of about equal parts of rolled sod, old manure and sand, with a dressing of bone meal; add leaf mould for the ericaceous plants. Pot firm, as you would in lifting any plant, and use a little draining, regulating the amount according to the time you expect the plant to remain in the pot. After potting the same care should be given as if it were a tender plant, syringing two or three times a day, in fact I should say treat them as you would a chrysanthemum, keeping them in the shade for a day or two and then giving them plenty of light and air with plenty of moisture. They should remain out as late as possible, say away into November or early December; in fact a severe frost seems to do most of them good as long as it don't break the pots.

Andromeda speciosa is an exception. When the plants are newly lifted they should have every possible attention, treating them as you would an Indian azalea or cool loving heaths, never allowing the frost to get at them. In this way you can usually keep their evergreen like foliage on them. This beautiful shrub should be given a good chance and it will be found to be one of the most beautiful

flowering plants for winter decoration. It is one of the plants which is really better for being carried over the summer season in the pot and treated like a cool greenhouse plant. In speaking of carrying over the plants in their pots or tubs after the first winter forcing, I find it is a good practice to do so for one or two years if the time can be spared to keep them well watered and syringed during the summer months.

Azalea mollis (*Rhododendron sinensis*) and the Ghent azaleas are always better the second year of forcing than the first, and again with this manner of treatment they can be brought into a more satisfactory bloom and the flowers last better, both on the plant and when cut. This matter of lasting qualities is very important and it is true of not only the azaleas but of all forced plants that their lasting qualities are far better when they are confined to the pots for any length of time.

Third: Pits and frames for storage of the plants till forcing is an important matter. A good big pit should be made of any convenient length, using common six by three sashes for the front portion of a span roof pit. The back side can be covered with planks which are covered with heavy tarred roofing paper, so as to keep the water from entering the pit. The pit should be sunk from four to five feet into the ground, the wall being made of heavy plank, or better, stone or concrete. This structure should be raised one foot above the surface in back and front and two feet in the ridge, care being taken to have a gravelly bottom, i. e., there should be no chance of the water standing in the bottom of your pit. The above kind of a pit is good for all shrubby or taller growing plants, and with plenty of movable shelves, the amount of plants that can be stored into one of them is simply marvelous.

Frames such as violet frames, only a little deeper, are fine for storing all the herbaceous plants and the like. The larger shrubs in tubs or boxes can be left out of doors as long as there is plenty of protection around the roots. The storing of your pits and frames should be put off as late as possible, usually in the latter part of November or early in December. By that time the wood of the shrubs is well ripened. We usually use these storage places in the fall for carnations, ericas, cinerarias, Indian azaleas, stevia and the like, which are transferred to the houses as soon as the chrysanthemums are past. In storing the pits a system should be practiced, keeping the different kinds in groups by themselves, so you will know just where to place your hand on a plant when needed. Care should be taken to see that all plants are well wet at the roots; this precaution will save extra care in the winter season, it being a rare thing to have to water the bulk of your plants in winter if they are in the proper condition when stored. The pits and frames should be kept open during the winter months, whenever the weather will permit it.

An apartment span or $\frac{3}{4}$ span house would be good for forcing purposes, having one part cool, with a temperature of 40° or 45° Fahr., so that you can retard your plants, and a medium temperature of 50° to 58° in the other apartment. A warm box closed in under the benches, with the hot water pipe running through, is very convenient for rushing lilac, valley and the like; 80° is a good temperature for this hot box. The pits and frames should be examined at intervals, in order to keep up to the field mice and moles

which often play havoc with the plants. It is well to have traps or saucers containing arsenic mixed in meal scattered around in different parts of the pits.

Fourth: Care and management while forcing is the most important of all. When shall we commence to bring the plants into heat? is commonly asked. Generally speaking, any time after the turn of the year, i. e., after January 1. It all depends upon when you want your plants to flower, and of course the earlier the plants are brought into heat the longer it takes to flower them, and usually the poorer are your results. I do not advocate early forcing; on a whole it is poor practice; to be sure there are a few plants which will do fairly well under early forcing, as crab apples, *Andromeda floribunda*, Mayflower (*Epigaea repens*) and Christmas roses, which can be brought into flower Christmas, but this list is small, and usually early forcing is not commendable. The plants when just brought into heat should have a cool place to start, and later more heat given them, but the warmth should be given gradually at first; in this way there is much better substance than when forced too rapidly. If you have no cool house place your smaller plants on the edge of the walks where it is usually cooler than on the bench, care being taken not to leave them too long. Then again this practice saves room. After being brought into the heat the most important suggestion to offer for all the woody plants is frequent syringing in bright weather. This will cause the new growth to commence much more rapidly than if you failed to do so. After the growth begins the general treatment is that given to ordinary cool greenhouse plants.

In regard to the length of time to allow to bring your plants into bloom, it is pretty hard to say just how long they should be in heat, it all depending on what temperature they are grown in, and at what season of the year you try to force the plants. It is worth while to remember that with the advance of the season, when the days begin to lengthen, it is much easier to force; the work is less uncertain, and the results are far more satisfactory.

Fifth: The care and management of the plants after they are through blooming depends entirely on the circumstances. The choicer shrubs, as azaleas, *Andromeda speciosa*, rhododendrons, Scotch brooms, and those that you wish to grow on in pots, for better results for another year, should be fed on and grown as greenhouse plants, putting them out of doors in the spring as soon as the weather will permit. Such plants as you are not particular about, as snowballs, lilac and the like, can be returned to the pit from whence they came, after a short period from the time they passed out of bloom, and with a little care will be in fair condition to plant out in the nursery rows, where they will soon recover and make good plants; many of them being in good condition for the same work the following season. In regard to the herbaceous plants and annuals, they usually find a place in the dump as soon as they pass out of bloom. Of course there are exceptions, hepaticas, phlox, houstonia, cypripedium, heuchera and the like are well worth saving, but get them out into the frames as soon as possible.

[CONCLUDED NEXT WEEK.]

OUR trade directory and reference book for 1894 contains 270 pages of information of real practical value to every one in the trade. Price \$2.00.

New York.

It is pleasing to be able to record that business has been fairly good for the past ten days. Retailers all report an encouraging activity in transient trade, and the wholesalers—well, a wholesaler is easily made happy; a few days of good trade raises his hopes, he forgets in his joy all the tribulations of the past, and he becomes about the future as sanguine to-day as he was downcast yesterday. So the present gratifying spurt has brought a smiling face and a light step to every wholesaler in town. At the 34th street market too a good trade is reported. Stock goes quickly even if prices do advance slowly.

Cool bright weather has had a beneficial effect on the roses, which have improved greatly in quality. Good solid buds with clean fresh foliage and good stems are now coming in from those growers who are attentive in growing and careful in handling and packing their stock. There are many growers though who do not receive for their shipments nearly as much as they might by sorting their stock and observing special care in the handling of the choicer grades. The proportion of first-class blooms in the average rose shipment is mighty small in many cases at best, but to this little percentage of good stock is due a very large percentage of the returns, for the culls are practically dead stock. No retailer will have them in his store, and even the Greeks sneer at them.

Violets are beginning to come in more plentifully, but are pale, small and imperfect as yet, and there is but little outlet for them until they are better in quality. They bring 50 cents per hundred, which is a good price for the kind. Lily of the valley is a little scarce, and the best sells for \$5 per hundred. Carnations are of good quality and selling well at 75 cents to \$2 per hundred, the latter figure being for some extra fine flowers.

On Sunday morning early a stranger arrived at Floral Park and took up his abode with Charlie Allen. Charlie says "the boy is O. K. By this time next year he will be able to disbud carnations." Yes, and make superfine mixtures in the gladiolus bins.

Boston.

The supply of flowers has shortened up considerably. Of white carnations there is a decided scarcity, and prices are tending upwards. White roses also are none too plenty, and everything in that line is quickly sold out. The first chrysanthemums of the season made their appearance on Thursday. They were brought to the market by Elijah Cartwright. The variety was a good white one. The name? Oh, the label got lost.

N. F. McCarthy & Co. have had a number of successful auction sales at which a large quantity of miscellaneous stock has been disposed of. Ed. Hatch's sale of palms and rubbers for W. K. Harris on Saturday, Sept. 29, was a winner. The stock was grand, the bidders were numerous and not afraid to bid, and prices were satisfactory all round, so everybody was happy.

The total proceeds from premiums paid for choice of stalls in the Market amounted to \$725. The annual meeting of stockholders and election of officers will take place on Saturday evening, October 6, at the American House, when a dividend of 10% will be declared.

Bowditch & Co. have opened at their new location, 168 Tremont street. Mr.

W. H. Long, the junior partner in the firm, remains in charge at the old store, which will be kept open for some months yet, while Mr. Bowditch looks after the new establishment.

Recent visitors in town: E. V. Low, England; H. A. Siebrecht, Providence, R. I.; W. A. Stiles, New York; Frank Hamilton, Tarrytown, N. Y.; R. H. Waggoner, New York; Wm. Appleton, Providence, R. I.

Prof. C. S. Sargent has just returned from California, where he has been studying American oaks.

Annual election of the Mass. Horticultural Society on Saturday, Oct. 6.

N. T. Davenport, well known as a florist for many years, died at his home in Milton on September 15 of old age.

Chicago.

Four weeks from to-day the chrysanthemum show will open. So far as can be judged at present the coming exhibition will eclipse all previous efforts. It is most gratifying to note that the interest taken in the show this year is a lively one, and is constantly growing as the season advances. The stock as a rule is looking fine, but how much of it will pass through the critical time of the next few weeks and come out as A1 remains to be seen. It is a notable fact that the new beginner in "mum" growing is the most enthusiastic and is predicting a complete success, while he with the experience of several campaigns in the field, is far more conservative.

The executive committee of the Hort. Society has been holding a number of meetings, at which all details as to management have been arranged. Mr. W. N. Rudd will have charge of the exhibition hall and as everybody knows Mr. R. is a hustler from the word go. It goes without saying that everything will be in shape promptly on time. Arrangements are being made for an ample supply of vases in suitable sizes. These will be ready to be distributed to the exhibitor on Friday, November 2. There will positively be no excuse for unnecessary delay and it may be well to bear in mind that the rules as to time at which exhibits must be in place will be strictly enforced this year. The revised premium list will be ready next week.

The first chrysanthemum blooms have made their appearance. The coming week we may look for some good Mrs. E. G. Hill, which in our section at least, appears to be the earliest one. Mr. W. N. Rudd, of Mt. Greenwood, has a fine batch of them, some 4,000 plants, all in fine condition, from which cutting will begin the first of the coming week. The earliest lot is grown in 5-inch pots, the balance, as well as all other sorts, on benches. The next early sort at this place is Golden Queen, which is showing color; the bloom will be large and fine. Next comes a fine batch of Minnie Wanamaker also showing color. A large list of the new varieties are grown in more or less quantity. Mrs. J. Geo. Iis is looking fine and so are Challenge, Beau Ideal and others. Of the older sorts we note a fine bench of W. N. Rudd, one of Ivory and another of Mrs. Jerome Jones. A new white seedling attracted our attention by its remarkably fine habit and splendid foliage; this may be heard from later.

This establishment has always been noted for extra fine quality of Harrisiiis. The first batch, in 5 and 6-inch pots, is beginning to set buds and is expected to come into bloom by December 1. More or less trouble is experienced from disease

of the bulb; from 15 to 20% are reported as affected.

Of the four rose houses one is filled with Testout; the plants are in splendid condition and are in fine crop at present. The adjoining house of Meteor also looks well and so do the others, one of Brides and one of Kaiserin. The latter was planted rather late but is making fine and vigorous growth, with a good show of buds. "One of the best qualities of this rose," remarks Mr. Rudd, "is that with me at least it throws no blind wood. Every lead comes with a bud."

Mr. Wm. Viberts, for many years with J. T. Anthony, is in charge at this establishment since last spring. Well, "Billy" is showing that he can handle "mums" and roses as well as palms and orchids.

The market this week was steady with local demand moderately good and shipping trade brisk. The rapidly increasing demand from outside points is particularly gratifying to the commission and wholesale men.

In the smaller varieties of roses prices remain unchanged but first-class Beauties have advanced to \$2 per dozen. The advance is not owing to a short supply, in fact the cut at this season of the year was never better, but there is a constantly increasing demand for this rose at all seasons of the year.

Mr. John Thorpe has severed his connection with O. J. Friedman. Uncle John intends to devote his entire time hereafter to landscape gardening.

Mr. Klunder has closed his establishment at Wabash and 22d streets and is now connected with O. J. Friedman.

Messrs. J. T. Anthony and Joseph Curran have entered into partnership under the firm name of Anthony & Curran, and are now open for business at 278 Wabash avenue.

Alfred Hildred, formerly with E. Hobbs, has started in business for himself at 302 31st street.

Mr. and Mrs. H. F. Halle have returned from Europe.

Recent visitors: Albert C. Rott, Bloomington, Ind.; H. A. Bunyard, of Pitcher & Manda.

Washington.

Mr. J. L. Loose of Alexandria, Va., who has for several years carried on very successfully a wholesale florist business, opened a new retail store at 1114 and 1116 F street N. W. on the first of the month.

The entire front is a show window where he had a handsome display of ferns and cut flowers. This fine window, which reaches almost to the floor, gave him an opportunity to make a fine display of his most excellently grown plants. It is one of the largest florist's windows in the city. The store room is large and very elegantly fitted up with a view of showing the decorations usually required in a private reception hall. At one side of the room is a large fireplace and mantel of the very latest design. The latter was decorated in a most artistic manner with ferns, principally adiantums, palms, tuberous begonias and cut roses. On the same side of the room is arranged a wide oak winding stairway leading to a balcony which runs to the far end of the room. This stairway and balcony were richly decorated with fine specimens of *Areca lutescens*, *Pandanus Veitchii*, *ken-tias*, *latanias*, *phoenix* and ferns. These fixtures, while adding much to the appearance of his store, also add much to the space for making a fine display of plants as they can be arranged on the

floor under both the stairway and balcony as well as upon them.

Mr. Loose intends to have these decorations continuously during the social season, changing them once or twice a week. He thinks it will aid customers in describing the character of the decorations they desire; they can then suggest changes here and there which will materially aid Mr. Loose in arriving at just what they want and will also help him in giving at once the approximate cost of such a decoration. This is a novel feature in our flower stores and a very attractive one too.

Mr. Loose has long enjoyed the reputation of growing fine ferns and palms, probably the finest in this section (particularly *Adiantum Farleyense*), and judging from the display in his store he is justly entitled to that reputation. His window extends entirely across the front of the two stores, is very high and also coming down near the floor, giving him an excellent opportunity to make a very effective and attractive display. The walls of the store are finished in a light terra cotta, capable of showing the plants and flowers to their best advantage. The entire interior of the store was fitted up under the supervision of Mr. Loose, who seems not to have forgotten even the smallest detail.

The back part of the store is given up entirely to the wholesale business and is separate and distinct from the retail store in front, having a separate entrance as well as a separate ice box and all necessary accommodations for that branch of the trade, so that his retail customers will not come in contact with his wholesale people.

Clark Bros. are going in strongly for chrysanthemums, especially for single flowered plants. They have one house devoted to this purpose. They are planted out in shallow benches. They have another lot of several hundred from which they are going to grow into stems carrying three flowers each; they are all strong healthy plants.

They are not growing as much *Asparagus plumosus* this season as last. They have been carrying the largest stock of this plant in the District, and probably do yet; they are loud in its praise.

Their roses, which are principally La France, are looking unusually fine, both their old and new plants. Their house of Woottons, which are grown in solid beds carried over for two years, are looking remarkably well and have been most satisfactory. They feed them freely with liquid manures. Their Beauties, which are two years old, are looking very promising. Their carnations are extra fine though limited as to quantity.

They have a fine lot of the new French cannas. They say the demand for them is growing and that next season they will be very popular; they are making preparations for a good stock of the best varieties.

Trade continues dull, though there is a slight change for the better; the past ten days marked an improvement on what it has been during the entire summer.

C. LESLIE REYNOLDS.

St. Louis.

The prevailing temperature during the past week indicates the approach of the winter season, firing has become almost a necessity with those who are apprehensive of sudden changes in temperature and careful of the stock grown. The dry spell which was so pronounced during the summer months has not as yet finally

broken away; several heavy showers during the first part of September alleviated it to some extent, but since then it has again assumed sway.

Trade, either as a result of the cooler weather or the return of the summer tourists, is improving steadily, the increase having been noticed during the past two weeks. It is not confined to city trade either; shipping orders have been received from several points out of the state and as far as can be seen at present the prospects are for a very favorable season. Stock at many of the places is in fine condition, and the quality of the stock cut will be fully as good as the average.

The roses at the C. Young Sons & Co. are in fine shape and will be heard from at the "Annual Flower Show." Kaiserin and Testout, of which they have a hundred foot bench of each are looking especially strong. Their Perles, however, are the best stock on the place, being strong and healthy, with the top a mass of red shoots. They have been making some improvements during the summer having added a 100 foot "lean-to" on the north side of a rose house, replaced the wooden tank in the water tower with an iron one, erected a new boiler stack, and piped the rose houses for vaporizing extract. Numerous other improvements have been made in smaller things in keeping with the above. The improvements do not stop when it comes to plant growing either, as they have at present writing a batch of cyclamen that would be hard to equal anywhere in the country; nothing noted in and around New York after the convention could touch them.

Owing to their chrysanthemum stock having been badly frozen last Easter they were unable to work up as many as usual and after spring sales were over, there was very little left for planting, and it was in poor shape, as a result they are not up to the usual average. The carnations are all planted and show the effects of the trying season, being small, in fact what usually fills two houses was comfortably filled in one.

At Mr. Dunford's, on the Colorado road, the roses are doing finely. This being his first season in growing for this market all are interested in the outcome. Your scribe is going to visit him shortly and try to learn the formula used in composting his soil, as it has had a most marked effect on the growth of Perles, the present supposition being that it is such a terrible compound that they are growing to get away from it.

A special meeting was called to discuss the advisability of doing away with the guarantee fund in connection with the "Flower Show." It was found by the committee having the matter in hand that there was a disposition on the part of the usual guarantors to look upon the proceeding as useless as there has never been as yet any disposition or necessity to call on the fund, and in view of the fact that the chances of a successful show are so much greater this season than in preceding years it appeared to them unnecessary to sign. A motion was made and carried to do away with the guarantee fund, a clause being inserted in the rules governing the show, stating that in case of a deficit the prizes offered by the club will be scaled "pro rata" to make it good. When it is understood that the club treasury is behind the show, and that the shows so far have been self sustaining the probability of scaling anything is rather remote.

Mr. E. H. Michel, who has had a severe attack of sickness during the summer, is

about town as lively and as full of fight as ever. He complains of being a trifle weak at times however.

Mr. E. W. Guy, of Belleville, recently lost his youngest child, and has the sympathy of many friends. R. F. T.

Toronto.

Chrysanthemum show matters are progressing satisfactorily. The executive committee met last week and attached prizes to all the sections. The secretary hopes to have the finally final prize list printed and published the end of this week or beginning of next if the government can make up its mind when to fix Thanksgiving day. I hear that already there are some carpers and criticizers, even before the list is published. It really is most astonishing what a faculty some men have for seeing defects after everything possible has been done to get things right and after every chance has been given them to express their views before matters are settled. I don't believe that these men actually wish to hurt the show, but their talk certainly does not help it. Why should they not say everything nice they can about the show? It would be so much pleasanter all round and they would have the satisfaction of having done some good to their neighbor. Those who have the real work of running the show need all the encouragement possible, they are always glad to receive and consider suggestions and do their best to please all hands. Now, let us show other cities what we can do, "give a long pull, a strong pull and a pull *altogether*."

"No thank you, no water in mine—Good health." Yes, the list has been arranged with the view of making a good show and not to please any one section of the trade. The public wants a good show, thousands don't mind spending a quarter to see a good show, we want to give the public a good show and get the quarters; Q. E. D.

Trade is still very dull though perhaps a trifle better. There were slight frosts two nights last week but only enough to touch the coleus in exposed situations.

A letter has been received by the secretary of the G. and F. Association from the Pennsylvania Horticultural Society concerning a national chrysanthemum trophy to be given to a vase of 100 blooms. I don't see why Toronto should not go in for this. The matter will be laid before the executive committee at an early date. Why should not other cities have a similar competition? It would be decidedly a drawing card.

Later—I have just seen over the signature of the Premier of the Dominion that Thanksgiving day will be on the 22nd of November, therefore the Toronto Show will be from the 20th to 23rd. E.

Buffalo.

Since the long dry spell broke up we have had frequent rains, but altogether beautiful weather, with one notable exception; on the morning of September 26 Buffalo was nipped by a frost just hard enough to kill coleus, but hurt very little besides. Twenty-five miles back from the lake it was a killer; 4 and 5 degrees of frost in many places. It has shortened up the supply of outside stuff greatly; gladiolus, helianthus and about everything else outside is gone.

W. J. Palmer & Son are sending in a grand lot of Meteor roses; they are also coming in from other sources, and it seems again to be the favorite flower. Brides and Mermets are not yet of A1 quality.

There is just at present none too many good carnations, but that cannot last long, as there is for this locality an immense area planted. Daybreak will be the most plentiful. In Corfu alone there are 6 or 7 large houses planted entirely with this variety.

Your correspondent made a rather extensive exhibit at the Genesee County Fair last week held in Batavia. It was truly a county fair. "Cold molasses" won the "hoss trot," and a young man and woman having the appearance of feeling anything but cold were married in public in front of the grand stand, for which they were rewarded (besides enjoying the admiring gaze of fifteen thousand people) with a handsome outfit for their new home. Last year the floral department of this fair almost needed a microscope to find where it existed, while this year, through a better and more liberal distribution of prizes, it assumed very respectable proportions. It was pleasing to see both Mr. Gus Noack and Mr. Munich, the local florists, make good exhibits. Mr. J. F. Cowell did the judging, and Mr. Mepsted went along to take care of W. S.

While in Genesee Co. I visited the houses of Messrs. Harmon & Burr of Darien. They have a fine house of roses doing well, a big house of carnations and 3 narrow houses of violets. This firm last year sent to town the finest M. Louise in the market, so they increased their violet growing capacity by two more well built equal span houses each 11x85. They planted the violets in the house early in August, and are now just putting in the glass, and they think they would have done better to have had the glass on a month before. The plants, however, are looking fine.

There are a few weddings occurring, making a demand for a more or less elaborate decoration, but nothing of any great extent. In two weeks such events can come along as fast as they choose, for we have the Queen of Autumn in quantity and quality as she has never been seen here before. W. S.

Philadelphia.

Have you any good Beauties? is now the first question for the hustler as he planks his pile of boxes down on one of the seats in front of the counter. All other roses are to be had in quantity, although there appears to be no overstock, the demand about keeping pace with the supply. The best teas command from \$3 to \$4 per hundred and the smaller class 2 to 3. Beauties have gone up a notch and are now 10 to 12. There seems to be more Testouts about this season; the color and size of the flower is all right but the stems are very weak. Carnations are getting into form and bring from 75 to 1.00. There are some very good Daybreaks to be seen; this variety promises to be plenty the coming season.

The "mums" are eagerly watched for, but up to date (October 3) none have been seen. Connor of Lansdowne is reported to have some Bergmann about ready. The general stock of chrysanthemums is reported to be very fine; as the varieties are being selected with greater care each season and more attention given to their culture the crop should be profitable to all who handle them. Messrs. Harris, Craig, Anderson, Evans, Lonsdale will all have large stock of this flower.

Gladiolus have been sold in large quantities recently at \$10 per thousand, tube roses are also plenty at from 2 to 3 per 100 stalks.

The Chadborn Automatic ventilator is being put in by a number of the trade about here the past week or two and as far as tried seems to work perfectly. Mr. Harris is particularly well pleased with four regulators that have been put in for him and says it works like a charm and is apparently a perfect machine. Mr. Valentine, representing the company here, says they will put it in any well built greenhouse on trial and let the apparatus speak for itself.

The meeting of the club Tuesday last was well attended, and considerable interest taken in the approaching chrysanthemum show at the Academy of Music. This promises to be the grandest exhibition the society has yet given. While the display of plants will not be so large, the collection of cut blooms will far exceed anything before exhibited. In addition to the large entries from this city replies have been received from a number of clubs and horticultural societies who will enter for the \$100 silver vase offered for the best collection of one hundred blooms to be arranged in one large vase. This feature will make an exhibition of itself alone. The Academy is a beautiful building and the society expects to spend a large sum in adding to its beauty by elaborate decoration both of plants and flowers. It is thought that parts of this work will be given to different firms, who will furnish sketches and bids for the same. Formerly the society bought the material and the decorations were arranged by volunteers from the city stores. A guarantee fund to which the Florists' Club agreed to subscribe \$100 was started and before long the sum of \$500 was pledged to help the society out in case they were unable to stand the expense.

This being the month in which the election of officers for the ensuing year is held the following gentlemen were elected: President, Edwin Lonsdale; Vice-President, Robert Kift; Secretary, H. F. Michell; Treasurer, Thos. Cartledge.

Mr. J. Welsh Young read a very interesting paper on "How to manage 20,000 feet of glass." This essay had been carefully prepared, and showed the author to be fully alive to the requirements of the modern methods of managing greenhouses.

Christian Koehler and Julius Bruce were elected to membership.

Mr. Harris reports having had a good sale in Boston last Saturday. K.

Cleveland.

Business is picking up nicely, and the prospects are much brighter than the fall of 1893. This week nearly all the downtown florists had large orders for decorating the different headquarters of the Knights Templars, who held their state convocation here. There were some largest pieces, and buttonhole bouquets were used by the thousands.

For the funeral of one of our firemen lately one of our florists had an order for a call box with the words "Last call box 9" on the face of it. This is not quite so bad as the case we have all read about where a friend of a deceased fire laddie sent a pillow with the inscription "Gone to his last fire." L. F. D.

Cincinnati.

Weddings, funerals and receptions are taking considerable of the florists' time and flowers. During the past week trade has been quite brisk, and the Jewish New Years on Monday used up all the Ameri-

can Beauties and good carnations. Stock is getting much better all around.

Mrs. J. W. Halliday of Paris, Ky., and J. J. Lampert and wife of Xenia, O., were callers this week. G.

Greenhouse Building.

Ogden Golet, Newport, a large range of houses. E. J. Mathews, Valley Forge, Pa., a range of houses. G. H. Morris, Chestnut Hill, Phila., a range of palm and rose houses. E. A. Schmidt, Radnor, Pa., palm and greenhouses. Mrs. S. P. Adams, Newton, N. J., a circular conservatory attached to dwelling; and Mr. W. H. Merriam, Newton, N. J., a handsome palm house. All the above are being built by Hitchings & Co.

J. D. Schemerhorn, Lenox, Mass, an iron frame greenhouse 100x20. Contract awarded to Thos. W. Weathered's Sons.

A. H. Moore, Colmar, Pa., group of houses with palm house in center 200x80.

J. H. Crankshaw, Norristown, Pa., conservatory.

Alex. Turnbull, Carbondale, Pa.; Henry Fountain, Middletown, Conn.; and A. A. Welden, Berlin, Conn., commercial greenhouses.

H. Hageman, Mamaroneck, N. Y., palm, rose and grape houses. E. J. Zimm, Scranton, Pa., house 48x16. J. Hassinger, Newark, N. J., three commercial houses, each 110 feet long. White House, Washington, D. C., conservatory 69x20. Tampa Bay Hotel, Fla., conservatory. Mr. Ryerson, Chicago, range of houses 150 feet long. Thos. W. Weathered's Sons are contractors for all the above.

Louis Dupuy, Whitestone, N. Y., house 100 feet long. Hitchings builder.

Jos. Mathews, Great Neck, N. Y., two houses, each 100x16.

J. H. Dunlop, Toronto, Ont., four large houses, two being built with short slope to south.

Bonn & Dressel, Weehawken, N. J., eight houses, each 78 feet long. Heating and ventilating by Weathered.

Building Around a Tank.

Replying to "A Subscriber" as to the best way to build a cheap house around his tank 25 feet high and 12 feet in diameter, the same to be frost proof, there are several ways of doing it, but one of the best I have ever seen was built by setting posts in the ground about four feet deep below the surface allowing the same to stand up about eight or nine inches above the ground level, sawing the posts all off level at this point. On these posts place hemlock sills 4x6 on edge, the corners halved together and well nailed with long nails. From this sill build up with 2x4 hemlock studding, doubling two together for the corners and placing the studding at 16 inch centers; this studding can be 13 feet long, the tops of which should be level. On these a plate 4x4 or two pieces 2x4 well nailed together is placed and the studding nailed to same. This, in "Subscriber's" case, can be braced to the top of the timbers carrying the tank. After putting on the plate place another tier of studding 13 feet long, nailing them directly over the bottom ones, carrying the corner ones up and putting a top plate on them similar to center plate. This will make the frame work about 27 feet high, the roof can be run to a point in the center, give it slope enough to carry water off freely, allowing 15 or 16 inch eaves to overhang. This being done start at the bottom and nail on diagonally hemlock rabbetted siding—that made 7 or 8 inches wide, which can be procured

at any large lumber yard. This will effectually brace the whole building, if two eight-penny nails are used at each stud in each board. When this is completed, including the roof, cover the whole with good stout tar paper, three or four ply, giving at least three inch lap to each course, then start at the bottom even with the lower edge of sill and put on novelty siding, nailing these with eight-penny wire nails, two nails at each stud in each board, and be sure to get each rabbit tight down to the former board. At the top under the eaves the boards should be notched out to fit close up to the boards of the roof and the whole should be jointed as closely as possible; the roof can be either shingle or tin as preferred. When completed the whole should be painted to preserve it from shrinking, etc.

The stub posts for such a building should be about three feet apart and the space between the ground level and sill can be filled in with loose stones packed closely together and then a bank of soil packed well round level with or a little above the bottom of the boards and slope from the same for fifteen or sixteen inches; this carries all moisture away from the building. If there is any danger of rotting the bottom boards the soil can be drawn away from them in spring and replaced again before winter.

To cover a tank twelve feet in diameter, allowing room to get at the tank from inside at all times, the building should be sixteen feet square outside measurement when complete; this admits a ladder in one corner and just enough room to get around the tank. Such a building will keep all ordinary frost out, but the pipes leading to and from the tank should have a covering of hair felt to make them absolutely safe, though I have seen them go through very severe winters in such a building without ever freezing up. Still for the very small cost of wrapping the pipe I think it best to be sure.

This kind of a building should have a door on the south side, also at least two windows on the south side to admit light enough for scanning the interior at all times and to admit air in summer.

JOHN N. MAY.

Glazing.

A great deal of trouble is experienced in some greenhouses during the summer months by the burning of the plants, caused by defective glass in the roof. The primary cause of this is that in glazing the house perhaps late in the fall the glass is taken right from the boxes and laid on with a rush, the only point kept in view being to get the house covered as quickly as possible. Where first quality glass is used this may be all right, though even then a defective light or two will get in. But where second quality glass is used greater care should be exercised. Previous to using, the glass should all be carefully sorted over, each light examined separately, the clear lights placed in one box, the blistered or wavy in another. There will always be sufficient clear glass to glaze the southern side of the roof, and it is through that the burning is done. The blistered and wavy glass can be used on the north side, the ends, and on the propagating house, as that is usually more or less shaded. To some florists, especially young beginners, this may seem unnecessary work, but if they do it they will avoid a great deal of yearly trouble in the future.

For those whose plants burn from blistered or wavy glass in the roof the only

permanent remedy is to go through the house on the inside and mark each defective light on the south side with a daub of whitewash, then have them removed and their places filled with clear glass. If this is done thoroughly they will not have to shade their houses in the summer, when it is an injury to roses, chrysanthemums, etc., or whitewash the defective lights on the inside, thereby making their roof look like a patchwork.

J. P. RING.

Cannas at Cornell.

From the remarks on cannas in your issue of September 22, page 176, one would be led to infer that the variety *Alphonse Bouvier* is in every way superior to *Charles Henderson*. Judging from observations made here, however, this is not the case. The former is a very tall variety, while *Charles Henderson* is of dwarf, compact habit, and could therefore be made to do duty where the other would be much out of place. The two varieties bloom with equal freedom; and although late to flower in Chicago, *Charles Henderson* has been in full bloom here for a month past. There is little to choose between the varieties in the matter of floral colors. Each variety has its own distinct place, and no good garden can well afford to be without representations of both.

Ithaca, N. Y.

M. BARKER.

Grasshoppers Eating Canna Leaves.

I have both large and dwarf cannas eaten very much. I thought the damage was done by worms or caterpillars, as per notes that have appeared in the *FLORIST*, but on watching early in the morning I found small grasshoppers at work eating their fill. They seem to like best plants that are in or near shady places. The only remedy I know of is to catch them and pull off their heads.

Highland Park, Md. F. THURLEY.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

BEEF SEED will be scarce.

EVERGREEN corn is one of the short kinds.

RED WETHERSFIELD onion is reported short.

CROP reports from Europe come in very slowly.

SUNFLOWER seed is cleaning up lighter than last season.

IT IS HARD to tell about potatoes, all good ones are ripening late.

THE VINE SEED stocks carried over from last year fill out this seasons contracts.

A NUMBER of the scarce radishes of last year will not be much more plenty this season.

TROUBLE is reported in settling accounts with French houses who have made no deliveries or short deliveries on bulb orders.

THE FOREIGN seed travelers seem very much at sea as to what they really can deliver, and are apparently unable to promise definite quantities of but few if any stocks.

Recent Exhibitions.

LYNN, MASS.—The Houghton Horticultural Society's 19th annual exhibition. An unusually fine display of fruits and garden and wild flowers at Odd Fellows Hall. September 25-26-27.

HARTFORD, CONN.—Hartford County Horticultural Society's September show, September 19-20, at Putnam Phalanx Armory. The largest and most interesting fall exhibition that the society has made since its organization.

PROVIDENCE, R. I.—The Rhode Island Horticultural Society's annual exhibition of asters and dahlias, September 14-15.

FREDONIA, N. Y.—Fruit and flower show of the Horticultural Society of Chautauqua County, September 27-28.

THE BALTIMORE chrysanthemum show will be held November 5 to 10 instead of as previously announced in our list of coming exhibitions. Mr. Wm. Feast, 228 N. Charles street, is secretary of the Baltimore club.

**THE AMERICAN FLORIST CO.'S
DIRECTORY
AND
REFERENCE BOOK**

FOR 1894
CONTAINS THE FOLLOWING :

1. The names and addresses of the Florists, Nurserymen and Seedsmen of the United States and Canada, the exact branch of the business each is engaged in being indicated.
2. A separate list of firms that issue catalogues, the space devoted to each branch of the business in each catalogue being also given.
3. A list of the names and addresses of superintendents of leading parks in the U. S. and Canada.
4. A list of the principal cemeteries of America at which the arts of the landscape gardener and florist are used in beautifying the grounds.
5. A complete, alphabetically arranged list of Roses in commerce in America, with class, habit of growth, date of introduction, name of introducer, and brief, accurate descriptions of the flower of each. Synonyms are also plainly given.
6. A complete, alphabetically arranged list of Chrysanthemums in commerce in America, with class, and brief, accurate description of each. Synonyms are noted and varieties that are very popular with American growers are designated by a star, and this year's introductions by a dagger.
7. A complete, alphabetically arranged list of the Carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each.
8. Seasonable Hints for the year, arranged in weeks, written by Mr. William Scott, and covering every detail of a general florist business. This is decidedly the most valuable contribution to the literature of the trade ever published. It is written in a plain, practical way, by a man who knows what he is talking about.
9. A historical sketch of the Society of American Florists from its organization to date, including officers for each year and lists of essays read at each meeting, with other information of interest.
10. A similar historical sketch of the American Association of Nurserymen.
11. A similar historical sketch of the American Carnation Society.
12. A similar historical sketch of the American Seed Trade Association.
13. Similar historical sketches of the Florists' Hail Association of America; of the National Chrysanthemum Society of America; of the Florists' Telegraph Delivery Association.
14. A complete list of all National and Local Trade Organizations, with names and addresses of principal officers, time and place of meetings, etc.
15. Statistics of Commercial Floriculture in the U. S. from the last census.
16. Statistics of the Nursery Industry in the U. S. from the last census.
17. Statistics of Seed Growing in the U. S. from the last census.
18. A list of Leading Horticultural Societies, with name and address of the Secretary of each.
19. Full information about Express and Postage rates on plants, shrubs, trees, seeds and bulbs

No less than 270 pages of valuable reference matter in compact form, and all UP TO DATE.

PRICE \$2.00 POSTPAID.

JAMES CHALK, Norristown Pa.

Saratoga, N. Y.

Saratoga has had a "Carnival of flowers," and the people are so pleased with it that it will undoubtedly be repeated annually in the future. The procession of decorated vehicles in the parade was larger than the wildest enthusiast had anticipated, and the decorations were lavishly elaborate. An enormous quantity of flowers was used, mainly outdoor stuff, such as golden rod, gladiolus, hydrangeas, asters, sun flowers, etc., though in the floats designs of roses and carnations were seen. One very effective decoration was of asparagus and mountain ash berries. Another was of pine branches, upon which were fastened in great profusion bunches of hydrangeas.

One of the floats carried a representation of the High Rock spring as it appeared a century and a half ago; another was a floral boat manned by ten boys; still another represented a Pompeian garden; a Roman chariot carried Ceres with her sheaves, Pomona with her fruits, Flora with her blooms, Æsculapius with his herbs, Diana with her stag and Pan with his pipes, and was drawn by four oxen; one that received many rounds of applause represented a fairy skiff drawn through a pond filled with cat-tails and lily pads by a great green dragon fly, a little girl sitting between the wings of the fly, and two more in the boat as water sprites.

Davenport, Iowa.

The Scott Co. Fair held here September 10 to 14 was a very successful one, and the floral display far exceeded that of any previous one, receiving much notice and favorable comments from the press. The center of Fine Arts hall was devoted to the display of palms, ferns and blooming plants, at either end of which were arranged cut flowers, consisting principally of roses and carnations.

F. L. Bills received first premiums for cut roses, carnations, display of plants in bloom, display of foliage plants, best exhibition plant, funeral design, basket of flowers and table decoration. J. T. Temple was first for display of cannas. B.

FERNS.

PANSIES...

Every Florist Claims the Best.

I am willing to have mine tested alongside of any in the market. Over a thousand florists used them last season, were pleased with them and made money out of them.

Have any quantity of fine plants ready now. They can not be offered in competition with cheap grown seed, but quality considered, are remarkably cheap at the price.

By Mail or Express, prepaid, 75c. per 100; by Express at your expense, \$5.00 per 1000. A Liberal discount will be allowed on large orders.

Address **HERMANN RÖLKER, Room 3, 218 Fulton Street, NEW YORK.**
MANUFACTURERS SOLE AGENT.

Council Bluffs, Ia.

Just across the Missouri river from Omaha, is Council Bluffs, and it is here that the immense plant of J. F. Wilcox is situated, some 75,000 feet of glass, beside the vegetable department about 1½ miles from the city, the largest place of its kind in the west, 50,000 square feet where vegetables are grown the year round.

Mr. Wilcox is comparatively a young man, but he is a hustler and his time is well taken up between these two establishments besides a large acreage of land.

Three large houses for roses, 100x20, short span to the south, and one 140x12 have been added this year. The glass is double thick and is butted with white lead between; a new potting and packing shed 25x140 is also nearing completion.

The roses grown here are shipped in greater part to Omaha, but quantities are sent through the states of Nebraska and Iowa. One house of Meteor, 140x24, was faultless, and a house of La France would be hard to beat; foliage perfect, in fact I did not see any mildew in the whole of this "rose factory." Beauties and Woottons are also grown extensively.

A feature here is a block of houses built on a hill as it were, one span 140x125 divided into three houses simply by partitions. Here are grown chiefly carnations, Daybreak, Lizzie McGowan, Portia and Grace Wilder predominating. "Mums" in benches and in 5, 6 and 7-inch pots were clearly "up to date," the "bench stuff" being specially good.

The "small plant" shipping trade here is of large proportions, the market being chiefly west of the Missouri and south.

Mr. Wilcox is hopeful for the future in spite of the partial failure of the corn crop.

J. R. MacPherson who has lately been more affiliated with the vegetable forcing business, has now branched out as a full fledged florist. He has just completed four houses 100x20 and three 100x10, principally for roses, carnations and smilax. They are built in the most approved style. Mr. MacPherson believes in the "best" all the time. The place will be heated by two tubular boilers, with sufficient power to heat 100,000 feet.

All the roses, etc., recently planted were looking first-rate and "mums" coming along nicely.

Mr. MacPherson is determined that his place shall rank high in the future, for as he says "he's in the biz for keeps." B.

Detroit, Mich.

Senator McMillan has now in course of construction an early vinery 20x40, a late vinery 20x40 and a plant house 25x60.

Mr. Thuman Newberry is also building a vinery 20x50, plant house 18x60 and conservatory 20x50.

Announcement to Florists.

We desire to announce the dissolution of the firm of Siple Dopffel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Dopffel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

SYRACUSE POTTERY CO. 403 North Salina Street, SYRACUSE, N. Y.

STANDARD FLOWER POTS.

If you are going to the Convention please examine our Flower Pots while there. To those who are not going we would simply say, "send in your order for large pots early."

THE PARMENTER MAN'FG CO.,
EAST BROOKFIELD, MASS.

Topeka, Kans.

Since opening their new and well appointed store the Bates Floral Co. report an increase in their trade and their bank account that has well repaid their enterprise. Trade has picked up a little of late in spite of the pessimistic crop reports, with better hopes for the future.

The death of Charles Martin, son of U. S. Senator Martin, was an "ill wind" that benefited the trade here. One emblem made by Mr. Bates was particularly handsome and a little out of the ordinary run of these "floral monstrosities." A scroll with a groundwork of ivy leaves and a cross of roses, standing on a cross of blue heliotrope in bold relief, the base of the scroll finished in white carnations, the whole finished with smilax and Adiantum cuneatum.

About a mile distant are situated the greenhouses, six 50x20, filled with the usual florist stock, roses looking exceptionally well.

Bird & Rodman were busy with a decoration of the K. of P.'s hall, who were about to hold a "pow wow."

F. E. Keith & Co.'s houses were looking well, and carnations in spite of the drouth fine; their collection of palms would rival many eastern houses of their size.

H. Hulse confines himself more to growing roses and carnations. A bed of La France was of high merit. He ships quite heavily to Kansas City in the season and his goods compare favorably with heavier shippers.

James Hayes did the decorations for Senator Martin, and considerable of the floral work. His "mums," roses and carnations all had the stamp of good health.

Sioux City, Ia.

J. C. Rennison has just completed a new house 100x18 for chrysanthemums and miscellaneous plants. "Mums" are one of the specialties here, Mr. Rennison holding an exhibition annually in a down town store hired for that purpose; it has always proved a good advertisement and investment.

All the standard varieties of roses are grown here, Clothilde Soupert included, it being found very useful for ground work in designs. The new rose Senator McNaughton is also being tried for the first time. A house 190x22 filled with La France, Meteor and Testout were of high merit.

Wire stakes are used exclusively here, but they are "crimped" so that the whole house has a zigzag appearance. It is said that one visitor thought they were snakes! But Sioux City is in the state of Iowa, so that must have been impossible.

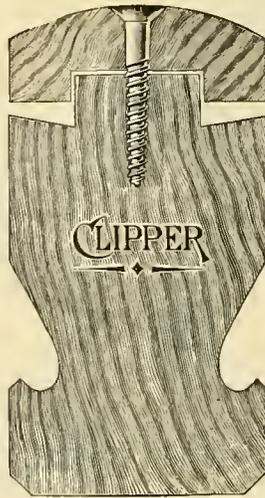

For carnations Daybreak heads the list, followed hard by L. McGowan, Tidal Wave, Grace Wilder, Portia; all fine plants, considering no rain had fallen since May.

Clematis paniculata grown inside has proved quite a success, its white, graceful and perfumed racemes being specially useful for wedding and other cut flower work.

A nice collection of decorative plants, ferns, etc., including a few orchids, were in fine condition.

John R. Elder is building a new propagating house 40x11.

Chrysanthemums, roses and carnations are the specialties of which Mr. Elder disposes in his city store. The greenhouses are situated on the banks of the Big Sioux river, the dividing line from South Dakota.

"Proof of the Pudding"

LANCASTER, O., June 4, 1894.

LOCKLAND LUMBER CO.

Gentlemen:—In answer to your letter asking my opinion of Cypress lumber as a material for greenhouse construction, I can simply say that I think it the best to be had. It is not only very durable and capable of standing considerable strain on account of the long tough grain of the wood, but it is very nice to work and takes paint readily. I am very well satisfied with the lumber purchased from you, and in all future building I may do I will be pleased to place my order with your firm.

Very respectfully yours, V. A. SCHNEIDER,

CHRYSANTHEMUM NOTES for this week will be found on page 247. Through a blunder on the part of some mail clerk they were delivered to us too late to secure their proper place.

CANTON, O.—Betscher Bros. of Canal Dover, have taken charge of the greenhouses of the late Louis Engle and will run them in connection with their place at Canal Dover.

WHENEVER you want anything pertaining to the trade, and do not find it offered in our advertising columns, write to us and we will take pleasure in assisting you to find what you want.

A few Suggestions on How to Manage 20,000 feet of Glass.

BY JOHN WELSH YOUNG.

[Read before the Florists' Club of Philadelphia October 2, 1894.]

In these days of sharp competition every grower must practice economy and systematize daily routine work of his place, for no matter how ably plants are grown, prosperity will not remain where business principles are broken. The management of 20,000 feet of glass may be more readily considered by dividing the subject into two parts, expense and income.

Our places, some larger, many smaller than the one we are considering, are now stocked, ready for the winter campaign, and the most important item in the expense column to us all is labor. Few, if any, of us can secure the best results from so large a place unaided. A good practical foreman who will take a personal interest in his employer's business is needed. Pay him liberally; get a good gardener for second man, and make up the force with boys from fifteen to eighteen years old who are willing and anxious to learn the business. These boys, if carefully chosen and advanced as they improve, become an important factor in our labor; for from their ranks should come the gardeners of the future who from their knowledge of the requirements of our business should be far more useful than men who have not served this apprenticeship. Thorough system in the daily work will greatly aid in securing the best results from our labor. Each employe should have his regular job with which to commence the day, be it cutting, packing, firing or airing, that everything may be in readiness for the special work that follows with as little delay as possible. A spirit of rivalry, too, is often a help in accomplishing work. This summer one of our growers had two rose houses to empty, clean and refill with soil. He took the boys and one house and gave his foreman the men and the other house and they raced. It was not long before both houses were ready for planting. No one can say exactly how many men are needed to run 20,000 feet of glass, so much depends on the kinds of plants grown, distance from market and so on. A safe rule is to have just as many men as will enable you to keep everything neat, clean and in good order and no more.

Coal is the next important item of expense. It will be readily admitted that as a night watchman must be kept, the small sizes are the most economical. Coal should be bought by the carload from a good wholesale house in the summer or early fall and the full winter's supply stored then. This plan has several advantages; the hauling can be done at a dull time; the coal is of better quality and lower price than later in the season, and

the vexatious delays so often experienced in getting orders filled in winter and early spring are avoided. Pea coal is the most popular size with the growers at present. Where the conditions are favorable buckwheat at current prices is more economical. With pea coal worth \$2.70 a ton on the railroad track and buckwheat \$2.05 a ton, the latter should show a saving of at least 15% in cost, and as most of the extra labor falls on the night man, this can hardly be called a disadvantage. Possibly with higher smoke stacks and with grates having the bars closer together we may find rice coal even more economical.

The remaining expenses while larger in the aggregate are too numerous to be discussed in detail; suffice it to say that while each item should be carefully considered with regard to quality and price, nothing should be omitted that will help, even a little, to make the houses yield finer and more abundant crops, for the small extra cost of such things as bone meal, nitrate of soda or peat will be returned with interest at harvest time.

To secure the best income from 20,000 feet of glass it is well to have a few specialties for which our soil and houses are adapted and which our market requires. Many growers are obliged by the requirements of trade to have a general line of commercial plants, but even then it is well to have one or two specialties for which we may be known among our brethren in the craft. A leading grower once said he always grew a few things that paid him poorly in order that they might help sell the things that paid well. While he only meant this in a limited sense, the idea that varieties of cut flowers, decorative plants and blooming plants have their ups and downs in popular favor, is worth remembering. Further, when choosing between two equally good varieties of plants from which to work up stock for a new house, it often pays to take that one which is least grown by your neighbors. Two or three years ago in Washington state, wheat brought eighty cents a bushel. Everyone grew wheat and this season it sells for twenty-five cents a bushel, or less than cost; while other cereals that do equally well there are scarce and command high prices. Smilax and Perle roses have at times been overdone in this way.

Having planted our stock, the next point is to arrange the crops in such a way that the houses will not be idle a single week in the year. Roses and carnations planted out and palms and other decorative plants in pots can be grown under glass all the year round less only a day or two for changing stock and cleaning the houses. Chrysanthemums planted in the bench can be followed by hybrid roses in boxes or pots and then geraniums, summer roses, by lilies, hydrangeas and later coleus. There are many combina-

tions that can be arranged nicely. The following story is a good illustration of this point; though it is not new. A gardener rented a piece of ground in England with a provision in his lease that he was to vacate on short notice whenever his landlord chose, provided the latter paid him in full for the crops that were in the ground. So well was the place managed that the landlord found to his dismay that the crops in the ground always amounted to the full value of the land! He finally sold his tenant the property at a low figure in order to get rid of him!

After the houses are filled try to have a reserve stock of some kind that can be brought in out of the frame in case of need. Remember that the late Peter Henderson with all his wonderful success never had a single year in which something did not go wrong. And if in spite of our best efforts something does go wrong, far better throw it out and replace with sound healthy stock even though the season be half gone than to waste labor and coal on a lot of rubbish. Dormant roses, hydrangeas and sweet peas are useful in this way. The question of economy of space under glass is a fruitful subject for discussion. Just how close together different varieties of plants can be grown consistent with perfect culture, as in the case of commercial fertilizers, great care and judgment must be used not to overdo it. A lesson in this point can be learned by a visit to the Chester County carnation growers. Here the plants are packed in the beds and benches like sardines in a box. The space for walks is often so small that it is a mystery how the grower does his work without wings. Yet the condition of the stock testifies that the work is done and well done.

A record of some kind should be begun now which will show just what each house has produced in the way of plants and cut blooms and the price realized from their sale. This record will prove most valuable next summer, for it is very difficult to even approximate results without the aid of figures.

In conclusion, let us recognize and strive to overcome two great dangers that lie in our path to success and try: First, to be perfectly reliable, never promising more than we can fulfil. Second, to be prudent in building, not to increase our glass until fully able to run it.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

"Good morning, old friend, here again, are you? What can I do for you to-day?"

"Well, Charlie, when I was here last week I saw that you were cutting a great quantity of wire netting into different lengths and I wanted to see how you were applying it."

"Oh, I have adopted the same plan that Mr. Dorner intends using this season, and as he describes it fully on page 196 in the issue of the FLORIST of September 29,

only I will not run the strings diagonally across the wires but half way across the bench and the same with the wire netting leaving an open space of one foot lengthwise of the bench for a free circulation of air. You see my benches are mostly six feet wide and a solid bed that width is apt to hold too much moisture on the foliage on cloudy, cold days. I experimented with this double wired system last year in a small way and it worked to perfection. As for the other supports as shown on page 195, why I tried almost the identical things fifteen years ago, and with the exception of Michell's, which will do very well for one who is growing for pleasure only and where space is no object, I believe they are worse than the old stake system, as they are bound to confine the foliage and stems so closely that they will make a harbor for rust, spot, red spider, aphid and every other trouble or disease that the carnation is heir to, and when you come to picking the flowers with long stems, well they are out of the question. The great advantages to be derived from using the inverted netting in the rows between the plants has been fully shown to you. There is one mistake easily made in the wire netting and that is in using too small a mesh. I do not think that anything less than one inch is practical. This is also the opinion of the Dailedouze Bros., who used considerable of it last year, but will not do so again."

"Well, now Charlie, you tell me to keep the surface of the soil moderately loose, but I see yours is getting quite firm."

"Very true, but do you not see those small white roots making their appearance on the surface? Leave those alone, for if you harm them you injure the plant, as they are the great feeders. To keep the surface loose we will put on a mulch of sheep manure as we have done on most of the benches. You see my houses were all planted before the 25th of August and I will begin to pick flowers from new growth by the 10th of this month. You see the great advantage of as early planting as this is that the natural inclination of the carnation is to bloom and produce seed before frost. Now if the plants are kept pinched back until they are placed in the houses they will start away vigorously to bloom; you will thus be able to pick fine flowers by the middle of October and continue through November and December, and as the sun gets in its good work in January the plants start off again with a rush, but if the plants are taken into the houses the latter part of September, and in bud, they will mature a few of those buds and then, as a rule, lie semi-dormant until late in January unless you have an unusual amount of sunny, bright weather during December.

"It does seem tough not to have flowers to pick now when Scotts and Daybreaks that are good are bringing two dollars per hundred in New York, but my experience has taught me to do as I am now doing. The rush of chrysanthemums that is coming will not affect first-class carnations to any great extent, simply because the majority of growers stick to the old method of housing plants in bud."

CHARLES H. ALLEN.

Chester County Carnation Society.

The society held its first regular meeting after the summer vacation October 6, with a fairly good attendance. E. Swayne asked for information about the proposed Philadelphia commission house, but no light being shed upon the subject the committee on sale of flowers was authorized to investigate the matter.

After some discussion a resolution was unanimously adopted deciding to ship flowers only to commission houses making prompt weekly reports of sales.

Wm. Swayne reported all plants housed and looking well generally; most varieties stood lifting as well or better than usual. A letter was read from E. D. Darlington urging a good display at the coming fall show of the Penna. Hort. Society. The growers present reported the cut of flowers for current week as about 33,000; most of these are from out of doors, this branch of carnation culture having increased largely in this section in the past two or three years.

A motion was carried authorizing the secretary to notify members that special effort would be made to have a good display of carnations at the Philadelphia chrysanthemum show in November, and that a committee would be on hand to stage the display.

Edw. Swayne showed a fine bunch of Ophelia; Wm. Swayne a very large deep pink, and Percy Barnard three new crimson and one white, all good specimens.

C. J.

Committees for Judging New Chrysanthemums.

In compliance with the resolution adopted at the last meeting of the Chrysanthemum Society of America Pres. E. A. Wood has appointed the following committees to examine and pass upon new seedlings and sports.

BOSTON.—A. H. Fewkes, Horticultural Hall; Lawrence Cotter, James Wheeler.

NEW YORK.—Eugene Dailedouze, care of John Young, 53 W. 30th street; Ernst Asmus, Wm. Tricker.

PHILADELPHIA.—Edwin Lonsdale, 1514 Chestnut street; Robert Craig, Thomas Cartledge.

CINCINNATI.—Richard Witterstaetter, Cor. 4th and Walnut streets; Fred Walz, H. L. Sunderbruch.

CHICAGO.—W. N. Rudd, Room 202, 185 Dearborn street; Frank Leslie, E. A. Kimball.

The foregoing committees will be in session October 20 and November 10 in their respective cities. Blooms addressed to the chairman (express paid) will be examined and reported upon under these conditions, viz:

Not less than six blooms of each variety to be shown and these to be only such varieties as have been given at least the second year's trial.

No member of a committee shall exhibit his own blooms before a committee of which he is a member.

It will be well for those who exhibit seedlings under number to also provide the committee with a name to be used in case the variety is commended so that they may be reported upon by name rather than number.

THE American Pomological Society will hold its next meeting at Sacramento, Cal., January next.

CORNER OF A BERMUDA LILY FIELD WITH AGAVE IN BLOOM.

Bermuda Notes.

In the Atlantic Ocean, 700 miles south-east of New York and the same distance directly east of Charleston on the South Carolina coast lie the Bermuda Islands or Somer's Land. The Gulf Stream, that great factor in climatology of some oceanic countries, is crossed about midway in the journey from New York. This little country, scarcely more than 24 square miles in area, for the main group, is of especial interest to the horticultural and floricultural world as producing the earliest garden products, at a time when we in our country are snowbound and ice locked and as the home of the Bermuda Easter lily, one of the important forcing bulbs used generally by the florists of this and other countries. We are aware that the average Bermudian is looked upon by some of these as a designing individual who exports to our market undersized, diseased and "blind" bulbs put up in short count packages, and finally adds to the injury by flooding our flower markets with cut flowers at a season when our florists have grown their Easter crop at great expense and find the market unfavorably affected by this unwelcome competition. A recent visit to this inter-

esting land shows such aspersion to be too sweeping, and the lily growers in the main as well intentioned as growers of any product in any land.

Aside from the bulbous product of the Islands there is a profusion of tropical and other interesting plants embracing a list too full for enumeration here, which would afford a plant lover weeks of study and delight. Nowhere have we seen such peculiar beauty of landscape from the first effect of the hills covered with the everlasting verdure of the Bermuda juniper, imparting what would otherwise be almost a somber monotony except for the hedge rows of oleander bounding the fields and roadways, the thickets of musas and palms, and the quaint architecture of the cottages built of coral limestone and embowered amid the foliage with their walls and roofs peeping through and almost twinkling in their whiteness, to the sloping coral shores and the marine beauty surrounding the islands. Neither is this a land of the "sere and yellow leaf" but one of perennial verdure and bloom, and at the time of our winter and earliest spring the tourist can feast his vision on fields of blooming lilies crowned with waxy whiteness. Lilies were grown in Bermuda

dooryards and gardens as long as eighty years ago, imported of course, as although this bulb thrives so perfectly it is not indigenous there. Florists are familiar with the history and rise of the Easter lily from its first popularization as a cut flower variety by Mr. W. K. Harris of Philadelphia, and the subsequent increase of its cultivation until now the Bermuda output of these bulbs is upwards of two millions, and their use still increasing. Several growers of these bulbs claim the distinction of growing them commercially and putting them on the market first and recount their operations of collecting the scattered products of flower gardens on the islands, gathering a few clumps here and there and by careful division of the small bulblets and scales from such limited sources securing stock to grow largely so that it would be invidious to assign any one the honor of first commercial cultivation, as in the race after a new money crop several growers placed their products simultaneously upon the bulb market.

The topography of the country is hill and dale, with outcropping of rock and divisions into small plots by hedge rows of the universal oleander. Stone walls and cedar groves rising out of the almost

bare coral rock divides the growing area into small patches, some of them of but a few square rods in extent, and plots of 2 or 3 acres are not common; two of the largest growers there only having fields containing as much as 6 or 7 acres in one place.

The soil, a rich red earth generally lying in "pockets" between and at the bases of the hills is peculiarly fertile and adapted to the crop. Although a limited quantity of *Lilium longiflorum* is produced by far the greater number are of the *Lilium longiflorum eximium* or *Lilium Harrisii* as now known, this latter from its shape of flower and earlier blooming is the most popular, though in some markets, notably Boston, there is a good demand for *L. longiflorum*. Doubtless the climate and conditions of Bermuda have changed the form of both of these lilies, but that the *L. Harrisii* is an evolution from *L. longiflorum* is surely an error, as in form of bulb, stalk, foliage and flower, these season of bloom and other indications, both forms are distinct.

Propagation is principally from bulb-lets, 3 to 5-inch and 5 to 7-inch bulbs, though primarily scales or even seeds are used to produce "stock" for planting. It also often happens that a surplus of large bulbs is left over, and to save them they are planted and this is about all this plan accomplishes, especially if planting is done late, as they do not often increase in size. Planting is done from August to December, September and October is the season in which most are put out. The bulb-lets are set in rows about 6 inches apart and the same distance in the row, every sixth row being omitted for a path. If well planted they should be plunged 6 to 8 inches deep, even 10 inches for the 4 to 5 inch and 5 to 7-inch bulbs is better, as shallow planting induces the crowns to split and throw up several stems producing double, triple and even quadruple clumps instead of the desirable single crown bulbs; besides bulbs growing near the surface or partly above the surface are affected by drouth and burned by the sun, and derive no support from side roots which are thrown out from the main stalk when deep planting is practiced.

The ground is simply scarified and hand weeded during growth to that stage when the plants cover the beds and can smother weed-growth. Deep cultivation is an injury at all stages except the first plowing or spading of the ground, when making the beds. About 60,000 bulb-lets plant an acre and with favorable growth will produce 35,000 to 40,000 saleable 4 to 5-inch and 5 to 7-inch bulbs, while if 4 to 5-inch and 5 to 7-inch bulbs are used for planting, a larger proportion of saleable stock is yielded, much of the product from this size "seed" grading 7 to 9-inch and sometimes over. Generally speaking seeds and scales produce the first season small bulb-lets, these the next season giving a crop of 4 to 5-inch bulbs and these the following year 7 to 9-inch and some 9 to 11-inch bulbs, so that from seeds or scales it requires from 2 to 3 years to produce the respective sizes mentioned.

The demand latterly has been for 5 to 7-inch bulbs, so that the greater share of the crop is fit for market in two years, though 7 to 9-inch, 9 to 11-inch and 11 to 14-inch take three years and even longer to "make."

Insect depredations do not operate, but blight and "the disease" some seasons injure yield and quality, these drawbacks occurring mostly on grounds too frequently cropped.

Late planted bulbs seem to flower as early as earlier plantings, but with

shorter stalks and of course less growth of bottoms in the shorter growing season. These make the loose scaled flimsy bulbs so frequently complained about. The flowering season begins about March 1 and continues 8 or 10 weeks, when the bloom ripens, droops and falls off. It is settled that if this is removed, especially with any considerable portion of the stem, the bulb is injured thereby and there is no doubt that the practice of cutting the flowers about Easter is against successful flowering of the bulb the following season. About June 15 to 20 some growers begin digging the crop stimulated by the demand from dealers who wish to offer early deliveries to customers, though there is no doubt that if lifting was deferred 2 to 4 weeks later the bulbs would be much better, the natural season of ripening occurring in July except for *L. longiflorum*, which remains green fully one month later.

The present season extreme drouth prematurely ripened the whole crop in advance of the usual time, and the earliest delivery of ripe bulbs ever known was made in June and earlier part of July. As soon as bulbs are dug they are picked up immediately, as half an hour of glaring sun at this season burns and withers the fleshy scales, ruining them. No curing process seems necessary before packing, if put up in sand, which so far has proved to be the best material, seeming almost to have antiseptic properties for preservation of the bulbs. Sawdust, excelsior and paper are also employed for packing and those who use them favor drying the bulbs in the shade a few days before packing, while by the sand method they go from the field into the boxes—after cutting off the roots—in the same hour and keep perfectly. Packing is done in strong iron strapped boxes usually of uniform size containing 350 to 400 5 to 7-inch, 150 to 200 7 to 9-inch, 100 9 to 11-inch, and 50 11 to 14-inch bulbs each, and are now ready for shipment. In assorting bulbs the most expert help is employed in grading the different sizes, counting, packing and separating *longiflorum* from *Harrisii* bulbs, though easy to distinguish the former, which is of flatter form, broader and more bluntly pointed scales, and a shade lighter yellow than the *Harrisii*. The *longiflorum* has a stronger tendency to throw double stems and split in the crown than *Harrisii*, which in this variety is not even remedied by deep planting, so that a crop of these is fully 50 to 60% double crowns in the small sizes and sometimes 70 to 80% in the 9 to 11-inch and 11 to 14-inch sizes, so that growers have been dropping their cultivation, and these are hardly produced in sufficient quantity to supply even the comparatively small demand for this kind.

Prices for Bermuda bulbs have steadily decreased since the first exports. Production now of *L. Harrisii* is fully up to the demands. With each year's decline some growers prate of no profits and talk of abandoning the business, yet every fall the planting mania seizes them, and they still continue at the old stand. The Bermudian surely has a monopoly in his climate and soil, but aside from this the expenses of cultivation show no reason why he cannot produce this stock as low as other bulbs grown in this and other countries which do not net the grower half as much money, and our observation while there showed where processes could be cheapened and our more advanced agricultural methods employed so that his crops should cost him less.

The impression that land is scarce in these islands is not well founded, as at a

fair estimate not over one-third of the arable land is now under cultivation.

Viewed from a New Englander's standpoint, where many farms have been made by blasting and clearing the land of rocks picking up stones and sinking them in drains, and piling them into stone walls, grading and filling land and reclaiming marshes, much more than two-thirds of Bermuda is available for culture, and this with rotation would afford fresh lands for crops for another century. It is quite sure that with each decline in prices for bulbs it will be hard to advance them to previous year standards, and there must come about a compensation in cheaper methods and economies of production if profits are to be preserved.

BURT EDDY.

The Forcing of Hardy Plants.

[Read before the *Gardeners' and Florists' Club of Boston*, by Charles J. Dawson, October 2, 1894.]

[CONCLUDED FROM LAST WEEK.]

LIST OF PLANTS FOR FORCING.

The following species and varieties with a slight description of their flowers and manner of growth I have tried and found satisfactory. In giving this list I have selected kinds most desirable, leaving out all varieties which are good only for botanical work:

Andromeda speciosa, of which I have spoken before, is beyond question one of the most beautiful shrubs for forcing. A plant well covered with flowers in March has few equals in a greenhouse, and it should be more generally grown. It requires a long season of nearly three months to bring it into flower, care being taken not to force it too rapidly. *Andromeda japonica* is very easy to force, taking from two to three weeks, but it is rather hard to obtain suitable plants. *Andromeda floribunda* can be brought into flower for Christmas without much exertion. The above mentioned are ever-greens, with white flowers and good foliage; will carry well, and by keeping a good stock in frames may be had at intervals all winter.

The mountain laurel (*Kalmia latifolia*) is a remarkably good plant for forcing purposes. This can be brought in a cool temperature of 50° in December, and can be had in good bloom from March on. As the plant advances it can be put into a warmer temperature, care being taken to keep it constantly syringed until the buds begin to show color, after which it should be stopped, or you will spot your flowers. *Kalmia glauca* can be brought into bloom in about six weeks. Some beautiful plants of this species were imported a few years ago and potted in 6 and 7-inch pots; when in flower they made a perfect picture, lasting some time.

Ledum latifolium (the Labrador tea) is very easily forced, but not very showy though. *Leucophyllum buxifolium* makes a very pretty little pot plant when in flower.

All the rhododendrons force well, especially the tender varieties, which can be obtained at a comparatively low price in the fall from abroad when you order your Indian azaleas and the like.

Erica carnea in varieties forces very easily and is very satisfactory in 5 or 6-inch pots, grown in a cool house or in the corner of a violet frame, its pink or white flowers lasting several weeks.

Daphne cneorum is the best of the daphnes for forcing, and is delightful with its sweet scented pink flowers.

Epigaea repens (the Mayflower), which is a favorite with everyone, is easily forced, though a little uncertain. Form-

HARVESTING LILY BULBS IN BERMUDA.

ing its flower buds in the autumn, it is ready to burst into bloom as soon as spring opens. Plants should be selected with considerable care from the woods in November, taking particular care to get a sort of ball around the roots; they should be planted in pots, pans and boxes, and placed in frames or at the end of a cool house. They are ready to force at any time. With a little trouble or extra heat they may be had at Christmas. If this plant could be properly handled it might be profitable to grow. All the above mentioned plants are evergreen, and are all very good forcing plants.

Azaleas all force well, especially the mollis and Ghent varieties. These plants are usually imported and well filled with buds. They should be firmly potted in a peated soil and placed in a pit, care being taken not to bring them into heat too early, and not to try to force them in too high a temperature. They are rather slow in starting, but are very satisfactory when in flower. After blooming special care should be taken to get new growths, and to be fed well, as they are much better if grown in pots all summer, making splendid plants for the next winter's forcing. If you have home grown plants they should be lifted the last of August, and after making roots, upon the approach of frost should be placed in a sheltered position.

Philadelphus coronarius and varieties, commonly called syringa, is good for forcing, large plants boxed off being the best and forcing better the second year. It should not be pushed too rapidly, taking over two months to get it in good form.

Spiræas are important for forcing, Spiræa Van Houtteii being without doubt the finest of them all, both inside and out. They should be forced very slowly, but for large decorations they should be very useful, it having one drawback, i. e., the flowers drop rather quickly. S. cantoniensis and its var. fl. pl. are also very

good, but should be lifted rather early, as the flower buds are apt to be killed by severe frosts. S. Thunbergii, though beautiful as it is grown out of doors, is of little use for forcing.

Staphylea colchica is easily handled, being excellent for forcing, its fragrant white flowers being very attractive. Plants for forcing can be obtained from foreign nurserymen, but often give best satisfaction when forced the second year and are well pot bound. The flower bud forming in the fall, they should be protected from early frosts.

Deutzia gracilis is so well known as a forcing plant that it needs no mention. D. parviflora, rather a rare species, is a trifle earlier than gracilis and is beautiful with its flat corymbs of white flowers. D. scabra and its several varieties, a coarser growing and later species, is also good for forcing. All these can be lifted late and put into pits at once, as they are well furnished with fibrous roots.

Exochorda grandiflora is fine for forcing, if suitable sized plants can be obtained, and grown in pots for one year. Care should be taken not to force this plant too rapidly, or the results will be very unsatisfactory. Grown cool, in a partial shade, the results will be good.

Viburnum Opulus sterilis, the common snowball, forces readily; care being taken to obtain plants well set with buds. V. plicatum is easily handled, and carefully selected plants will give a large amount of flowers in a comparatively small pot or tub. V. rotundifolium is about two weeks earlier than plicatum, but of a less sturdy habit.

Ribes aureum and R. sanguineum force easily, their fragrant flowers keeping well and would be quite a novelty.

Pyrus baccata and var. Parkmanii is best of this class for forcing if care is taken to obtain grafted plants. With a little care, by growing on in pots for a year, they can be had in bloom Christ-

mas, when they should find a ready market.

Cytisus scoparius, the Scotch Broom, is grand for forcing, and if plants are well grown, are more than beautiful, when in bloom; the plant improving if kept growing on in pots the year around. C. præcox is also a good forcer.

Magnolia stellata is by far the best of the magnolias; the only trouble is to obtain suitable plants for forcing, the same trouble being the case with Wistaria sinensis, which can be beautifully forced, if plants can be obtained.

Of the single roses Rosa multiflora, the Japanese variety is the best; it being easy to train it into a beautifully shaped bush and will flower in great profusion. A medium sized plant in an 8 or 10-inch pot will throw several hundred flowers which might be very useful for making up purposes. The hybrid of this, called the Dawson rose, is equally good for forcing.

Iberis sempervirens and I. Tenoreana are the best of the candytufts, and should be very useful for florist work.

Syringa vulgaris and varieties is too well known to call for any remarks, and S. persica forces equally well; the flowers being a little more delicate than the just mentioned species.

Lonicera tartarica in varieties is fine to force, but drops its flowers easily, as do the various varieties of Prunus triloba.

Rhododendron Vaseyi is equally as pretty when forced as it is out of doors, also R. Rhodora and R. Dahuricum, var. macronatum; the latter being easily brought into flower in a week to ten days.

Jasminum nudiflorum in a cool greenhouse blooms in short order, and continues pretty for sometime. A great many other shrubs will force extremely well, but I have mentioned the above as some of the best. In regard to the herbaceous plants and annuals suitable the list is very long but I will only mention a very few of the best.

Cypripedium spectabile, *C. pubescens* and *C. acaule* are beautiful, forced; a good grown pan of any of them comparing well with any greenhouse orchid. Plants can be obtained from their native state in September, and planted close together in boxes or pans in a soil mostly of sphagnum and leaf mould, can be forced at any time after New Years, the results being very satisfactory, care being taken to keep the first two mentioned very wet.

Trillium grandiflorum, when obtained in good clumps, is desirable.

Spiræa aruncus is grand, when something showy or decorative is desired. Big clumps are to be sought after, but be careful not to injure the leaves by fumigation.

Viola pedata is easily handled in 8-inch pans and is very pretty in flower, and can be easily obtained from the woods in the fall.

Aquilegia canadensis, var. *nana* is the best of the columbines. For forcing, plants should be started in the early summer in flats.

Polygonatum giganteum is the best of the Solomon's Seals, and is beautiful forced.

Phlox subulata both pink and white varieties, always force with grand results.

In conclusion, I would say there are many plants which I have not mentioned which do equally well as the above, and with a little care and management a great deal of satisfaction and pleasure can be had from the forcing of these hardy plants.

Perennial Asters.

At this season of the year the fields and meadows are bright with the different varieties of perennial asters, and he who will introduce them into his garden will find them equally effective there; for they will respond to generous culture with more vigorous growth, greater freedom of bloom and larger flowers.

By planting the tall *Novæ-Angliæ* and its variety *roseus* among shrubbery or the back rows of borders their gay spike of bloom will make the greenery bright and attractive, and *longifolius* is desirable in similar locations; and by adding some of the newer of *Novæ-Angliæ*, like "Mrs. Richards," with small pink flowers, or "Glow," the bright carmine one of similar habit, a still greater diversity is obtained.

Sunny slopes by woody drives can be made attractive by planting clumps of *corymbosus*, *vimineus* or *multiflorus*; while in broader spaces the large starry wands of *ericoides* will afford enjoyment, and some of the newer forms like "Wood Nymph," of a delicate lavender tint, or "Queen of the Garden," of a rose shade, will be an attraction to the seekers after novelties. In shady places, under trees or north of walls, with the hardy ferns as a setting, *radula* and *acuminata* with their starry white blooms will present a picture that will invite rest and pleasure. But *spectabilis* must not be forgotten for it is one of the most brilliant with its sky blue robe and as rare as choice. What could give better effect than a bed of *ptarmicoides* with its masses of white blooms, with an undergrowth of bright *alternanthera* or the glowing red of the *achyranthes*, to give character before the aster blooms, and if more variety is wanted or contrasting beds desired let *linariifolius* be added, with its lavender colored blooms. Clumps of *undulatus* may be dotted here and there, for they

will give a wealth of bloom, of many delicate tints of lavender, lilac and rose.

Cordifolius demands recognition, for well grown plants from their abundance of bloom recall drifts of snow or sprays of foam and from their beauty and grace will obtain numerous visitations; if variety is sought elegans will furnish the darker shade, and "Silver Spray" the white, and the new and novel and rare will be found in *tubiflorus*, a variety with its petals transformed into tubes, after the style of the tubular *chrysanthemum*.

Another of the strong growers can be found in *Novi-Belgii*, forming rich and grand showy masses of a variety of colors; "Lady Trevellyn" being the best of the whites; *versicolor*, pink and white, chameleon like in its coloring; *Dreerii*, with garlands of pale rosy purple flowers; while "Archie Hind" and *formosissimus* are brilliant in their robes of deep purple blue, and "Arctaurus" with his ebony stems and glossy foliage will be welcome guests.

The last to bloom but not last in beauty, even defying Jack Frost in his first attempts to set up his reign, are *Shortii* and *turbinellus*, the last being one of the most distinct and choice of the family, of a delicate shade of pink, while *Shortii* is a giant in growth, five feet or more, and as bountiful with his blooms in proportion to his stature.

Many more are waiting the invitation of the culturist in their desire to make our gardens beautiful in the late autumn days.

GEORGE HOLLIS.

South Weymouth, Mass.

Miscellaneous Seasonable Hints.

It is about time to think of sweet peas if you want them in flower by March, when they fetch their best price. If you can afford to devote a whole bench to them don't let it be too deep or too rich. The writer had a grand failure last spring, and is quite willing that others should not fall into the same mistake. The house was facing south, large glass and a temperature of 50° at night. Everything was all right except that there was one foot of rich soil, and below that the natural ground. They grew 12 to 15 feet in height and gave little flower, and what little flower there was came very late. You can grow a profitable crop of sweet peas on a carnation bench; by the time the peas are taking up much room the carnations will be able to take care of themselves, and if the peas do encroach on a plant or two of carnations they will return money enough to allow of the sacrifice of a few carnations. They can (the peas) be grown on the north side of the middle bench of a carnation house and trained up the iron or wooden pillar. It is best to sow at once one-half dozen seeds in a 3-inch pot, and when well up thin out to 3 or 4 of the best plants. Plant out in a month or six weeks' time. In the spring white and pink are the colors most in demand; *Blanche Ferry* for pink and *Emily Henderson* for white. The shallow bench, 4 or 5 inches of soil, does not allow the peas to grow so rampant as a solid bed, and throws them quicker into flower; in fact it's a case of arrested development, and flower is the natural consequence. If the soil is a little heavy and well beaten down round the peas so much the better.

Let your hydrangeas get a little freeze on them before lifting. It hardens the wood, and they ripen and force better. Pot firmly in a liberal sized pot. Good, chopped up loamy sod with a fourth of rotten manure will suit them, and pot

firmly. If you don't have a house just above the freezing point to winter them in then you can keep them along the edge of the path of the coolest house you have and they will do all right until they start to grow in March, when they must have a better place.

Before the violets begin to bear many flowers they should be carefully gone over and all runners cut off. It is particular to do this now. After this the runners that come will not do so much harm. Some growers let the runners go after December, as they will take root, make crowns and give flowers in the spring when the old crowns are exhausted.

You ought to be cutting a good crop of smilax from the beds planted early in July. The beds will not want mulching yet. Wait till the next crop is cut. Cut every string clean as you go and don't water the bed till a growth of a foot or so is made. If you water a smilax bed when denuded of all its growth it will rot the roots.

Pelargoniums that were propagated in early September will now have filled their small pots with roots. Give them a shift into a 3-inch, or if very strong a 3½-inch; pot very firmly and give them a cool house, and the lightest you have. A shelf near the glass where the air can circulate round them is the ideal place for them, but shelves, like brick flues, are almost a thing of the past. Never overwater them; they will keep growing till December, when they should rest for three months. During that time they should be on the dry side. In using the word rest in regard to pelargoniums I don't mean in the sense I would as applied to hydrangeas, but it is a period when little growth should be encouraged. The old plants that you shook out and started fresh will now be growing strongly. If you want them for early spring keep them a little warmer, but well in the light with both the young and old plants. Nip out the end of the growths as quickly as the shoots are strong enough.

Remember that from now on for a few weeks is the best time to move or divide any herbaceous plants you have; perennial phlox, pyrethrum, pæonias and most all of them can be handled now without fear of losing one per cent.

This is as late as you can clip back *cytissus*. If your plants are compact with round neat heads leave them alone, but if there is any straggling growth don't be afraid to shear it off. Don't stand them too close together on the benches; you can almost say that about any plant, but *cytissus* will quickly spoil if there is not daylight between the plants.

If you have occasion to grow that once popular bedding plant *Centaurea candidissima* sow the seed at once. If sown much later it is useless. It is a precarious plant to grow, and you can do without it.

W. SCOTT.

Some Good Decorative Plants.

To be useful to the decorator a plant must needs possess various good qualities and prominent among these are effectiveness and endurance, and if the decorator be also a grower, ease of propagation and rapidity of growth will also be important considerations, but the two last qualifications will not appeal so strongly to the man who buys all his stock already grown, unless it be in the extent to which they affect the price.

A little more variety in decorative stock would certainly admit of more originality on the part of the artist in such materials, but from the fact that only very limited

VIEW IN A BERMUDA CITY GARDEN.

stocks of many such valuable plants are now grown there has been but little opportunity given to the trade to test them. Among the plants well adapted for such use though seldom seen, are one or two varieties of osmanthus, one of the prettiest of these being *O. ilicifolius variegatus*; an evergreen shrub much resembling a variegated holly, the foliage of about the same size and handsomely marked with yellowish white. This plant is considerably grown in Europe in standard form, and makes a nice companion plant for a standard bay tree, being quite as hardy as the latter. *Osmanthus fragrans* is another useful member of this family and will probably be more readily recognized under its former name of *Olea fragrans*. This is also of shrubby habit, having dark green glossy leaves, and producing small whitish flowers during the summer, the flowers being quite fragrant. Either of these plants may be propagated by cuttings of firm young wood, but they root rather slowly, and the quicker method

of grafting is often used, one of the privets being used for a stock to graft upon.

Raphiolepis japonica (also known as *R. ovata*) is another little known shrub of considerable beauty, and so nearly hardy as to endure slight frost without injury. It is of rather compact growth and is well clothed with broad, dark green leaves some two or three inches in length. The foliage is not the only good point about this *raphiolepis* however, for it bears terminal clusters of sweet scented white flowers, these being frequently followed by a crop of berries about the size of large peas, and almost black in color. Seeds of the plant in question germinate quite readily in a cool greenhouse, and it can also be increased by cuttings.

Aucuba japonica has been much more widely distributed than the foregoing, and is frequently in evidence as a hall plant or for filling vases or window boxes in very exposed positions. In fact the *aucuba* may be considered as a generally useful plant, and adapted for filling in a

gap where scarcely any other plant would survive, except possibly an *aspidistra*. *Aucuba japonica* is much more effective when carrying a crop of its bright red berries, but from the fact that the male and female flowers are on different plants it is necessary to fertilize them in order to secure such a crop.

Eurya latifolia variegata is another admirable cool house plant that is well adapted for decorative work, but unfortunately it is a rather slow grower, and cuttings of this plant exercise the same deliberation about rooting. The foliage of *eurya* bears some resemblance to that of a camellia, but is beautifully variegated with light yellow, and the tips of the shoots and young leaves are flushed with pink, this combination of color being particularly attractive. Possibly an improvement in the propagation of this plant might be made by grafting on seedling camellias, but not having tried this operation I am unable to speak from experience on this point.

Pittosporum variegatum is another hardwooded shrub that will bear much exposure and neglect, though not nearly so striking in appearance as the last mentioned plant, the foliage of the *pittosporum* being somewhat crowded, glaucous green with white variegation, and the individual leaves varying from one to three inches in length.

The various forms of *Dracæna indivisa* are among the most enduring members of this large family, and of these *D. indivisa atropurpurea* is one of the most effective, its narrow leaves being of very graceful habit, and more or less suffused with purplish red, the color usually being most distinct near the base of the leaves. This *dracæna* can be had from seeds as readily as the ordinary form, and like the latter may be field grown during the summer.

Farfugium grande and *Aralia Sieboldii variegata* are both old residents of our gardens, and both possess great merit as house plants, their leaves appearing to be impervious to gas and dust. Neither requires much attention in cultivation, and both flourish in a cool greenhouse temperature, and may be used with good effect in filling out a bank of foliage plants.

W. H. TAPLIN.

A New Yellow Canna.

We have received from Mr. J. Freytag of Milwaukee, Wis., blooms of several new seedling cannas. Among them is a yellow seedling from Florence Vaughan which seems likely to prove a marked acquisition. The color is a clear golden yellow, with numerous small dots of faint red, but these spots are so light in color that they do not detract from the golden yellow tint of the flowers in the mass. The petals are very large and rounding, $1\frac{1}{2}$ inches across, the flowers well opened, of the iris type. The spike is very shapely, the flowers being well held out from the stem. Foliage green, habit dwarfer than Florence Vaughan. A very beautiful thing.

Among other seedlings of Mr. Freytag's is a brilliant orange vermilion flower, dazzling in color; unfortunately the habit is drooping, but without doubt the color would make it very showy on the plant. A red of the Bouvier type, with erect spikes, and a very prolific seedling of the Crozy type, were also with these; all showed some points of excellence, though the yellow first named is without doubt the gem of the collection.

Cannas Koenigin Charlotte and Gloire de Montet.

ED. AM. FLORIST:—I send you blooms of cannas Koenigin Charlotte and Gloire de Montet. The Koenigin Charlotte is certainly a wonderful advance over all cannas of the Mme. Crozy type, and it is unquestionably a novelty of the first merit. If all our novelties embraced so marked and distinct an advance as does this exquisitely beautiful canna there would be less complaint about new introductions. Its freedom of bloom, fine habit and grand foliage will put it at once in the first rank of cannas.

The Gloire de Montet is of the same type and color as Koenigin Charlotte, but is much dwarfer in habit and produces even more flowers than Charlotte. Very many who have seen the two varieties like Montet the best, but I am inclined to think that Charlotte possesses greater merit, still there is a place for both of them. I think cannas have come to be a permanent factor as bedding plants and with such promising novelties

in store as the above two and Mr. Vaughan's Chicago and Columbia (Kramer) and Eldorado (Lemoine) there will be no lack of patrons for this useful plant.

E. G. HILL.

The blooms Mr. Hill refers to arrived in fine order. On first sight the flowers suggested a great similarity, but further examination caused us to give greatest regard to Koenigin Charlotte for its velvety brilliance of color, although Gloire de Montet is undoubtedly a very showy bloom. Koenigin Charlotte is even more glowing in hue than the colored plate sent out by the introducer; it is positively radiant, and the colors are strongly defined, the red being splashed and serrated over the yellow at the upper part of the petals. Gloire de Montet appears to have more yellow in the flower than the first named, and the red is more of an orange vermilion, and less velvety than Koenigin Charlotte. One would imagine that a bed of the Koenigin, bordered by the dwarfer Gloire de Montet, would be a very showy and effective decoration.

Regulating Prices.

It is with us again—that old much discussed question as to the practicability of some plan whereby the wholesale prices of cut flowers, roses especially, in the large centers may be regulated.

Unfortunately for those most deeply interested the case is one where theories are of little value, and to those who have studied the subject for years and listened to the arguments advanced on all sides of the question the matter seems as far from a satisfactory adjustment as it ever was, and the only apparent result of the agitation which recurs regularly at this season of the year is deeper discontent.

That vague, but powerful, factor about which we hear so much—the "law of supply and demand"—is a terrible bugbear to the buyer at holiday time and to the grower in the overstocked fall and spring months. The only time when its rule is acknowledged and gracefully submitted to by the grower is when he does his own selling. The price at which he cleans out his stock rather than carry it home looks very different to him in the light of this personal experience from what it would if returned to him by an agent. He learns by actual contact with existing conditions that the fault lies not so much in the method of marketing as in these very conditions which cannot be controlled to any great extent nor argued out of existence.

A few years ago at the holidays and during the cold days of midwinter the chorus of protest and discontent from the buyers was both loud and strong because of the advanced prices which they had to pay. But it was only the natural result of a demand in excess of the supply for the time being, and for this there was only one remedy, viz., to increase the supply until it was sufficient to meet the demand at such times. This was done and now the old holiday advances are no longer possible.

But flowers are not like sugar—they cannot be locked up until the price goes up; nor like coal—the production cannot be stopped and then resumed again at pleasure; you cannot put greenhouses on half time now and then run them at double and treble capacity next January as you can a woolen mill; you cannot turn your establishment to the manufacture of carnations to-day when these are wanted and then two months hence start in at rose growing

because perchance carnations do not bring paying prices. An increased production of roses to meet the midwinter clamor means a spring and fall supply augmented in increased ratio, and the tremendous overstock in the big markets to-day is only the inevitable penalty of the effort to supply the winter demand.

This being the existing condition of affairs, where can a remedy be found? Plainly not in any attempt to set up arbitrary prices; nor is it easy to see how the market can be materially enlarged; and to advocate the destruction of a certain percentage of the daily production is simply a waste of breath or printers' ink, as the case may be.

To us it seems that the situation will provide and apply its own remedy in due time. Rose growing cannot be run at a loss any more than any other business. From the steady continuance of greenhouse building and the rare cases of greenhouse abandonment even in times of great and general business depression it would seem that cut flower growing has not yet ceased to yield a fair remuneration. If disaster does come it will come first to the man who grows rubbish. That establishment which turns out first-class stock is in no danger either present or imminent.

The public know well now what a good rose is, and there is no longer any place for the heaps of badly grown, mildewed and battered stuff which may be seen any morning at any of the large wholesale markets. This is what brings contempt upon the flower trade when exposed for sale all along the public streets; this is what cuts the averages down. Far better one good rose than ten bad ones—better for the grower's reputation, better for his pocket. And better for the general welfare than a score of meetings or impracticable combinations.

New York.

Business is fairly satisfactory all round. Whether it will continue so is problematical. One thing is certain, if chrysanthemums would only stay away for another month the peace of mind of the rose growers would be more firmly established. Mme. Bergmann, October Beauty, Yellow Queen and other early favorites are beginning to come in from all directions and are to be seen in most of the prominent florists' windows already. Double violets are exceedingly poor. The growers would show better judgment if they should dump such stuff on the rubbish heap and wait until they could show creditable flowers before sending them to the market. Single violets are all right as to quality.

The bowling club was organized on Monday, October 8, with Alex Burns as president and John Young as secretary and treasurer. Meetings for practice will be held every Monday afternoon at the alleys on 22nd street and for business once a month. Only members of the New York Florists' Club in good standing will be admitted to membership.

The features of the Florists' Club meeting on Monday evening, October 8, were a communication from the Farmers' Club in relation to a proposed exhibit of chrysanthemums to be held by that organization at 111 W. 38th street on Tuesday, November 13, and to which members of the Florists' Club will be welcomed as contributors; the presence of Mr. D. D. L. Farson, secretary of the Penna. Horticultural Society, who made one of his entertaining speeches and invited the club to compete for the special \$100 vase offered for the best hundred blooms at

A TYPICAL BERMUDA HOUSE AND GARDEN.

the chrysanthemum show in Philadelphia; the difficulty encountered by the president in getting members to serve on committees, and a beautiful display of tuberous rooted begonia blooms, including some handsome fimbriated ones, from Mr. Thos. Griffin of Westbury Station, to whom a vote of thanks was passed. Messrs. J. N. May, Ernst Asmus and J. H. Taylor were appointed a committee to take charge of the exhibits intended for the Philadelphia competition and Messrs. C. B. Weathered, E. Asmus and J. H. Taylor were entrusted with the duty of arranging for the annual dinner of the club. Intending exhibitors at the Farmers' Club meeting are requested to communicate with Dr. F. M. Hexamer, 52 Lafayette Place, New York. Tables and other requisites will be furnished by the Farmers' Club.

The organization of the Growers' Club of Madison has been followed by the formation of another association composed mainly of the employes of the various Madison rose growing establishments, social enjoyment being the object. A meeting was held at Fagen's Hall on Thursday evening, 4th inst., and Mr. L. A. Noe was elected president. The Growers' Club has now 26 members. Only proprietors are eligible to membership.

The earliest chrysanthemums, those ready to cut October 10, at J. N. May's were Yellow Queen, Mrs. E. G. Hill, Miss Kate Brown and Sædling 031, a large full white. Close following these varieties will come Minerva, Ivory and Mayflower.

Mr. May's neighbor, C. H. Hagert, has added another rose house 125 feet long this season. The principal varieties grown here are Bridesmaid, Bride and Cusin, and they are all in fine condition. Mermet appears to have been almost entirely abandoned by growers in this section.

A cablegram announcing the sudden and serious illness of Mr. Thos. W. Weathered, who is in England at present, was received on the 6th inst. Mr. C. W. Weathered was making hasty preparations to start for England when later and more encouraging news came to hand.

Mr. Alfred Dimmock arrived on Sunday, October 7, per steamer Etruria after having experienced a very tempestuous voyage.

J. Stuhls & Co. have moved to a new store at 661 Fulton street, Brooklyn.

The auction sale of orchids from F. Sander & Co., at the rooms of Aug. Rolker & Sons on Friday, 19th inst., promises to be the most important sale ever held in this country. It will be a great opportunity for American orchid lovers.

Boston.

The annual exhibition of fruits and vegetables, which was held at Horticultural Hall on Wednesday and Thursday, October 3 and 4, was not quite as extensive as usual, a result of the dry season, undoubtedly, but the quality of the exhibits was very superior. The vegetable department occupied the lower hall, and

the fruits the upper hall. Cauliflower, celery, tomatoes and endive were noticeably fine. The display of grapes was very small indeed.

Mrs. J. W. Clark showed some good bunches of hothouse grapes, in several varieties. To her was awarded the David Allan prize for the best bunch of hothouse grapes of any variety, her exhibit being a fairly good bunch of Black Alicante. Mr. Allan was evidently disappointed because there were no other entries for this premium. If the schedule were changed so that the prizes for hothouse grapes should be competed for at the plant and flower exhibition, rather than at the fruit and vegetable exhibition, it would suit better those growers interested in this line. Indoor grapes are grown almost exclusively by those gardeners whose interests are most largely concerned in the plant exhibition. Very few of them are attracted to the fruit show, and hence it is that when a good bunch of grapes happens to be shown, it is seen by few of the grape enthusiasts.

A fine plant of *Allamanda Williamsii*, in a ten inch pot, and covered with bloom, was shown by Mr. N. T. Kidder.

The annual election of the Horticultural Society took place on Saturday, October 6. Among the exhibits on that day was a well bloomed plant of *Bougainvillea Sanderiana* shown by David Allan and a silver medal was awarded to it. This plant fully sustains the reputation claimed for it by its introducers and is destined to become popular. A silver medal was also

awarded to John L. Gardner for a new marbled form of *Cypripedium Charlesworthii*.

T. D. Hatfield showed three magnificent blooms of *chrysanthemum Mrs. E. G. Hill* from early crown buds. There has been an inclination to find fault with this variety, but those who saw these blooms must have been effectually silenced. It would be next to impossible to overpraise it. A certificate of merit was awarded and it was fully entitled to this honor.

The first meeting for the season, of the Gardeners' and Florists' Club of Boston, was held on Tuesday evening, October 2, and was attended by quite a fair number of members. The essay by Mr. Dawson on the forcing of hardy plants proved to be very interesting. In the discussion that followed, attention was called to the fact that of the stock sent out by nurserymen, of such plants as *Cypripedium spectabile*, *Trillium grandiflorum*, etc., a large percentage are too small to bloom. Mr. Jackson Dawson said that there was no excuse for this, excepting carelessness on the part of collectors, as flowering crowns of *Cypripedium spectabile* were almost as easy to identify as those of lily of the valley. Speaking of hardy stock for forcing purposes, he said further that with shrubs or plants potted or tubbed in the spring time, and cared for during the summer, twice as good results are obtained as where stock is lifted in the fall.

Much interest centered in the report made by Mr. P. Welch on behalf of the bowlers who went to Atlantic City. Mr. Welch said, "We went into this contest with the sole purpose of winning the first prize," and caused much merriment when he said further, that the gentlemen who bowled had deprived themselves of several good times, in order to be in proper condition for the game.

Messrs. Jackson Dawson, Geo. Sutherland, M. H. Norton, J. Wheeler and S. J. Coleman were appointed a committee to nominate officers for the ensuing year. Messrs. C. J. Dawson, Warren Ewell, Edward Hatch, T. W. Dee, and F. J. Walsh were appointed a committee to arrange for the usual *chrysanthemum* dinner, which will take place probably on the evening of either the first or second day of the *chrysanthemum* show. The next meeting of the club will be on Tuesday evening, October 30.

The cut flower trade is fair for the season. Carnations are scarce. *Chrysanthemums* are beginning to appear from all directions, Mme. Bergmann and Mlle. Lacroix being the first varieties to make their appearance. Mr. Thos. A. Cox is credited with having brought the first blooms of the season to market, he having cut Mlle. Lacroix on Tuesday, October 2.

A new wagon bearing the inscription "Sutherland, Florist" hitched to a stylish looking trailer is the most recent sensation in floral circles.

Visitors in town: Mr. J. Comont, representing Carter of London, Eng., and Mr. Jos. Rolker of New York.

Philadelphia.

The "mums" have arrived, October Beauty from Joseph Heacock being first on the 5th; Mme. Bergmann came next from Mr. Connor of Lansdowne on the 6th. The 9th was graced with the first yellow, *Gloriosum*, from Henry Standen, Bryn Mawr, while the same day John Curwen, Jr., of Villa Nova, cut some fine Kate Brown, a good white with a wealth

of rich dark green foliage right up to the flower. The quality of all the flowers so far has been very good, far better in fact than the demand, but as the season is just opening this is to be expected; when the houses are opened and warmed up and folks begin their city life then trade will start in earnest.

Roses of all kinds are improving and sell well for the season, Bridesmaid being the only exception; the color of this variety is too deep as yet and they are hardly up to the standard in size. Myers & Santman are carrying fine Brides and Meteors. Heacock has fine Kaiserins and Beauties. Anderson has good La France, Meteors and Kaiserin. Burton's Meteors have the call, as do also his Beauties; he is also the only grower who has Cusin in quantity. Smith & Whitely are cutting some good La France and Brides, Becker extra fine La France, while a score of smaller growers are about daily with a general variety of more or less excellence. Prices are about the same as last week, with a slight tendency to weakness, owing no doubt to an increased number of growers coming in. Some are still pinching off the buds, preferring to wait until the "mums" are on the wane before commencing to cut.

Carnations from this time on will be fine; many growers even now are sending in first-class flowers. Mr. Weaver of Ronks, Lancaster county, is at the head of the procession with Daybreaks; his are certainly fine. DeWitt of Torresdale has good Sweetbrier; this variety is to be seen in many a grower's basket, and shows up well; \$1.50 is now asked for the best; good ordinary flowers can still be had for \$1. Cosmos is now in and sells for 50 to 75 cents per hundred. Smilax seems scarce, the first time this year; maidenhair and asparagus seem to be pushing smilax to one side.

House plants are selling very well with the store men, and growers are commencing to feel the local city demand.

Speaking about plant sales, H. A. Dreer sold 500 *Adiantum Farleyense* in 5 and 6-inch pots to Mr. Vanderbilt of Aiken, S. C., in addition to a carload of other plants one day last week. This will clean the Philadelphia market pretty well of this beautiful fern, the only other stocks being held by Messrs. Charles and Lemuel Ball and Edwin Lonsdale.

The old song about the fakir and grower is being revived. One storekeeper on Eighth street has roses marked down to 25 and 30 cents per dozen, he having to meet the competition of an enterprising fakir hard by. None (?) of the Philadelphia growers sell to the fakirs, but they get plenty of the regular stock that is seen in the stores just the same and at one-fourth the prices. It is marvelous how far the fakir's money will go; probably it is because it is picked up on the street, and is like sour apples to the hungry man.

Albert Hoag, late with Heron & Nisbet will branch out for himself at 30 South 17th in a few days; this will make the fifth cut flower store in this block, two on Chestnut street and three on 17th. We wish him success.

Charles E. Mechan is laid up with the quins.

Mrs. Karl Miller of 67th and Elmwood Avenue died on the 5th inst. aged 70 years. Mrs. Miller has always been a hard worker; from 1870 to 1892 she carried on business in a basement at 11th and Chestnut, and from there removed to 8th below Walnut.

The market project is still slumbering but with some signs of waking up. K.

Toronto.

It is unfortunate that the Dominion government will persist in appointing Thanksgiving day so late, not but what it is quite possible to get a first rate *chrysanthemum* show in the third week of November, and not that it affects the attendance at all, but it means money lost to florists when the space the exhibition plants take up might have been filled up with something else, and then there is the extra time taken up in attending to them, which is no small consideration; however, I hear very little grumbling, everyone being agreed that it would be no use holding the show independent of Thanksgiving day until the association has some money to lose or until it can be made so attractive that the people will come to it holiday or no holiday. At present the great trouble is the uncertainty of the date until October; if we knew the show was going to be late, say in May, we might grow only late sorts. However, we are going to have a good show anyway. The prize lists will be published this week. Any one wishing for a copy can obtain one by dropping a card to A. H. Ewing, 85 Carlton street, Toronto. A great effort is going to be made this year to have the show ready for the judges on schedule time and it is to be hoped that all exhibitors will cooperate with the management in carrying this out, it would make things so much pleasanter all round and be a great relief to the secretary.

I think I may say now that business is brightening up a bit; at the market last Saturday although buyers did a good deal of haggling there appeared to be more of them, and they seemed to be more inclined to part with at least a little of their money for flowers and plants. The stores also report some improvement. Some very good roses and carnations are coming in now. Frosts have been very slight up to this date (8th) and as yet very little damage has been done in gardens even to the coleus, though of course everything is beginning to have an autumn look about it.

The city and the provincial governments are disputing about the grounds in front of the new Parliament buildings, who shall pay for it and how it shall be done; there is plenty of scope for a landscape gardener to show what he could do here and it is to be hoped that between the two governments something good may come. E.

St. Louis.

Trade still continues to improve, it being spasmodic, however; prices are gradually improving and tending upwards. With the advent of the earlier *chrysanthemums* it is expected they will fall slightly off; they can not fall much. The principal loss will be in the waste, and this will consist of the poorer quality of flowers.

The expected increase in trade on the day of the "Veiled Prophet's Ball" was about in the same proportion as last year; some stores reporting an increase, while others about as in former seasons; as a whole it may be stated as satisfactory. Beauties were easily in first demand, second choice going to Meteors. Long Beauties seem to be the rose called for in preference to any of the other varieties on almost all occasions where it is possible to use them. The Merchants Exchange Hall where the ball was held was not decorated as extensively as in former years; the fountain in the center of the hall was the principal object dec-

orated. It consists of four basins elevated one above the other and gradually growing smaller towards the top; the rims of these basins were lined with foliage plants, palms and others, lying on their sides and projecting over the basins below, while from the edges curtains of wild smilax trailed to the water beneath. On these screens of smilax were worked various flowers, the upper ones being partly covered with roses, carnations and other smaller flowers, while towards the base heavier flowers were used, such as dahlia and cannas. Immediately under each basin and inside the screens of smilax were circles of incandescent lamps which lightened up the whole and added immensely to the effect. The musicians were screened as usual with palms, ficus and other plants. The decoration was by the Chandler Floral Co.

The thirty-fourth annual fair of the St. Louis Agricultural and Mechanical Association was held during the past week; they offered \$409 in premiums for plants and flowers, divided as follows: Plants, \$258; cut flowers, \$78; cut flowers, amateurs only, \$68. The plant premiums were about evenly divided between the C. Young & Son Co. and the Michel Plant and Bulb Co., while the C. Young & Son Co. captured all the firsts in the cut flower displays.

The fifth annual banquet to the florists, nurserymen and gardeners, provided for in the will of Henry Shaw, founder of the Missouri Botanical Gardens, will take place on the 5th of November at the Mercantile Club, it being the night previous to the opening of the annual chrysanthemum show, and will doubtless be in keeping with its predecessors and afford all attending an agreeable and pleasant evening.

Mr. A. Y. Ellison is out on the road again, meeting with excellent success; at last accounts he was rounding up Texas.

The first frost of the season prevailed on the night of the 8th, cutting everything tender down to the ground; in some localities the mercury dropped as low as 22°, this being exceptionally heavy for the first one of the season. The frost brought chrysanthemums, or the "mums" brought the frost; for the next morning several consignments were received from the south consisting of Kate Brown and Gloriosum; they were fair outdoor grown stock and sold for 6 cents. R. F. T.

Chicago.

The supply this week has shortened up considerably and in consequence prices have somewhat stiffened. White is particularly scarce. In roses Kaiserin and Brides of first quality have advanced to \$4; Testout and Meteor \$3 to \$4. Bridesmaids hold firm at 3, while Perles, Merrets and Woottons go at 2 to 2.50. Beauties are stationary at \$2 a dozen for extra long, and \$1.50 for medium; in quality Beauties are good, but the smaller varieties of roses are only fair to medium. Carnations are much improved and in good demand; first quality disbudded stock sells readily at \$1.50. In this class may be noted some very good Sweetbrier, Daybreak, Nancy Hanks and Lizzie McGowan. In whites all fairly good stock goes at top prices, while Tidal Wave, which is rather short stemmed as yet, Portia and Grace Wilder sell at 1 to 1.25.

The first shipment of "mums" in any quantity was received Monday. These were Mrs. E. G. Hill, of fair quality, which brought 2.50 a dozen. This is the only local grown variety which has made

its appearance so far. From the south shipments are now received daily by several commission men. The first lot consisted of Mme. Bergmann, which are rather poor, being cut too green; these sell at \$1. Towards the latter part of the week several lots of Kate Brown showed up fairly good; these bring from 1.50 to 2. In yellow Mrs. Whildin of fair quality bring \$2. All these are grown in the open air on disbudded bush plants, the foliage being rather poor.

The obsequies of the late Prof. Swing, which were held last Sunday at Central Music Hall, brought out a magnificent display of flowers. The most notable feature of the decorations was the lavish use of Beauties and orchids. A garland draped around the bier on which the casket rested was composed of 150 very fine cattleyas; the arrangement was very striking. A vase of superb Beauties, a hundred or more with stems 3 feet long, was also very fine.

Messrs. Bassett and Washburn have just returned from a flying trip to Richmond and Indianapolis full of enthusiastic praise of the hospitable manner in which they were treated by the brethren in both cities. "We wanted to see," says Mr. Washburn, "what the boys are doing in 'mums' this year. Well, Mr. Hill's at Richmond are simply grand. I never saw a finer lot of 'mums,' and as to his carnation houses, all I can say is that I wish we owned them ourselves. Bertermann's establishment at Indianapolis also looks splendid. His 'mums' are bound to be an important factor in the coming exhibitions."

Messrs. Freytag and Foster of Milwaukee were recent visitors.

The revised premium list for the chrysanthemum show has been mailed. Anyone interested, and who did not receive a copy, may have one by addressing a request to the secretary, Mr. W. C. Egan, 350 Monon Building.

Chrysanthemum Notes.

The blooms are now showing color and the earlier varieties beginning to unfold, and before many days the result of the last few months labor will be before you. If the plants are clean and free from aphid stop fumigating heavily and only give them a light smoking when it appears to be necessary, but don't neglect it altogether, or wait until the little pest gets thoroughly grown or settled, for if you do it will again be necessary to resort to heavy fumigating, which is very apt to injure the blooms. A light smoking once a week ought to keep them in check.

Begin to let upon strong liquid manure on the plants on which the blooms are beginning to expand, and stop all feeding with nitrates. The plants that are not yet showing color will still need to be watered with liquid manure as has been the custom, and continue until the petals begin to unfold. Give all the plants except the red varieties a little sulphate of ammonia occasionally, remembering always to make the solution weak.

It is time now to watch the ventilation and when the heat is not turned on close

all the ventilation at sunset, but it is better to turn on a little heat and open the ventilators a little, and keep the temperature in the neighborhood of 50°. This will just suit them and the buds will swell larger, while a warmer temperature will make them push out too fast, and the center petals will not attain their full length, making a bloom not nearly as deep as one grown a little cooler.

Do not continue syringing the top of the plants any longer, but wetting down the foliage a little while watering will not do any harm and will keep the leaves clean and fresh looking. Overhead syringing is very apt to injure the blooms after they begin to open. Keep a sharp eye out for all blooms that are close to the glass and keep them away as much as possible, for if they touch the glass after the petals are open they will get discolored and the bloom is ruined. Watch the plants constantly, and under no conditions allow them to become dry or wilt, for that would be fatal to good flowers at this stage of their growth. Note any change that may come over the plants and buds; those that are keeping notes will find plenty to dot down in their books, the dates of buds and numerous other small items that will come in very handy in future years. Let close attention to everything be the watchword.

ELIJAH A. WOOD.

Washington Gleanings.

Pennsylvania avenue, east from Eleventh street to Eastern Branch, is planted with the most picturesque of American oaks, *Quercus palustris*, most of the trees having been obtained from seed of a tree planted by Mr. Smith years ago in the Botanical Garden. They have been five years planted and are now very handsome, having kept fresh and green all season notwithstanding the drouth. It is to be regretted that the avenue was not planted continuously right up to the Capitol with this species. Red oaks and a mixture of other things constitute the balance of the planting.

The superb grouping in the Capitol grounds is a convincing testimonial to Mr. Olmsted's genius. The shrubbery and trees are grandly grouped and judiciously pruned and brought into shape. Variations of the old English hawthorn have been used very successfully. The magnolia group comprising *macrophylla* and several varieties of *grandiflora* is much admired. Many of the trees suffered considerably from the dry weather. The purple leaved and purple stemmed *Acer Pseudo-platanus* was especially affected. An English walnut 35 feet high, a very handsome specimen near the east front of the Capitol, was raised by Mr. Smith from seed in a flower pot.

Koelreuteria paniculata forms a magnificent round-topped small tree that associates well with formal architecture. It bears beautiful yellow flowers followed by conspicuous and handsome fruit that lasts well up to midwinter, and no insects seem to trouble it. It ought to be more generally planted. Perhaps its terrible name has helped to retard its dissemination.

Bignonia Chamberlaynii with lovely primrose yellow flowers bloomed twice this summer. It covers the rafters in one of the greenhouses at the Botanic Garden and its beautiful festoons were greatly admired. Why do we not see it oftener?

The "Goddess of the Dancing Grove" (*Dianella*) is one of the best house plants in the country. Authority, W. R. Smith.

WE HAVE RECEIVED from Mr. A. W. Smith, Americus, Ga., sprays of variegated Euphorbia (*Poinsettia pulcherrima*). The variegation is extremely distinct, being bright yellow, and well diffused over the leaves. The scarlet bracts surrounding the flowers, however, which usually make this variety so showy, were sparse and small, seeming to have reverted to variegated leaves. It is likely that this variegated form would make a showy thing for subtropical bedding, if the coloring is constant under exposure.

EARLY CHRYSANTHEMUMS recently received by us from Mr. E. N. Zetlitz, foreman to Lewis Ullrich, Tiffin, O., included large specimens of Harry Balsley, Mrs. Whilldin and Ivory, as well as some later

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

VISITED CHICAGO: H. A. Johns, R. H. Shumway, Mel. L. Webster.

S. H. CHURCH has established a seed business at Evansville, Ind.

MESSRS. N. B. G. Co. report that Mr. W. J. Troy has left them under a cloud.

SOME of those early seedsmen are nearly ready to go to press with their vegetable forms.

BOSTON—Mr. Eugene Schaettel of Paris, representing Vilmorin Andrieux & Co. spent a few days last week in Boston.

THE pea and bean situation is reported to have changed of late, Michigan and Wisconsin crops turning out even shorter than estimated September 1.

THE preliminary price-list of Robert Buist, Philadelphia, dated October 1, quotes Large Red Wetbersfield onions at \$1.00, Yellow Globe Danvers at \$1.15.

St. Paul, Minn.

Part of the week has been dark, damp and dismal, the only bad weather we have had in months. Firing early and late has been the order and some days fire has been needed all the time, as no gleam of sunshine has found its way through the dense clouds. Notwithstanding the general tendency to cold we have not at this writing, October 10, had a general killing frost. Potato and tomato vines are as green as in the summer, many trees still retain their leaves. Cannas are still blooming outside while pinks and petunias are as fresh in the garden as in midsummer.

We are pleased to note a general improvement in trade all along the line. There is a good demand for all roses, but more especially for Beauties and Bridesmaids. Testout is another good seller, while Mrs. Whitney—well, we wish there were more of them, they are superb. Carnations are in strong demand but few if any first-class blooms are being offered. Violets are not yet in the market though frequently called for. Chrysanthemums have not yet shown themselves. L. L. May & Co. have some Monarch showing color that will be in bloom by the last of the week.

The next meeting of the State Florists' Association will be held at the West Hotel, Minneapolis, October 13. We hope there will be a full meeting, harmonious action and plans perfected for closer union and work during the coming winter.

As this is the season for bedding out tulips, hyacinths, crocus and other bulbs for early spring blooming we are surprised to see none of the florists looking after that line of the trade here. With a little persuasion many of our finest lawns might be adorned with gorgeous, showy flowers from the time snow leaves the ground until summer flowering plants come into bloom. With the present low price of bulbs the cost to the purchaser would be small, the city would be beautified and there would be a good margin of profit to the florist for his time and labor.

Two new flower stores are to be opened here soon. C. I. Warren of the Warren-dale Greenhouses will occupy one on St. Peter street near Fifth. This is a fine

location, in the midst of the best retail section of the city and should be profitable to the proprietor.

L. L. May & Co. will move into new quarters at 25 West Fifth street. They will move their entire seed and floral business here, occupying four floors of the large and commodious block. Their seed business has been conducted heretofore on Como avenue some distance from the heart of the city. As they have quite outgrown their present quarters the move will be advantageous in many respects.

Cary I. Warren is again aspiring to political honors, having been nominated for state senator on the Democratic ticket. There seems to be quite an affinity between flowers and politics.

S. B. Dicks, of Cooper, Taber & Co., was a visitor during the week.

FELIX.

A Bewildered Sunflower.

Sir Robert Ball tells an amusing anecdote illustrating Moore's words, "The sunflower turns to her god when he sets the same look that she turned when he rose." An explorer, he said, intent on proving the truth or otherwise of this theory, took out a sunflower seed to the Arctic regions and planted it there. In the course of time the plant came up and flowered vigorously—just, however, at the season when the sun never sets in the Arctic circle; so the poor sunflower, true to its nature, followed the process of the sun, expecting it to disappear at night in the ordinary course, but as the sun did not set at all, the flower strained itself round and round until it twisted its own head off.—*McKeesport Herald.*

Notes From Dreer's.

Tobacco water from leaf tobacco is the only insecticide used here on palms. The proportion is ten pounds of tobacco to one barrel (45 gallons) of water. It will go more than twice as far as the same quantity of stems, probably because the leaves contain more nicotine. Stems are often found to have been treated with chemicals which is another argument against their use. Damaged leaves can generally be procured for a small price. The above mixture is made up in the afternoon and used the following morning. It is essential to use it fresh, as after 24 hours fermentation sets in and it is then innocuous.

Pans for fern seed are not used any more at Riverton. Pots are considered better. Where there is damping off the loss is not so great. At one time this season there were 246,000 ferns in pots in frames outside. Next to Adiantum cuneatum the greatest run this season has been on Davallia stricta.

Hemerocallis Kwanso (flore pleno) variegata while very pretty with its variegated foliage proves to be inconstant.

The demand for manettia vine seems to be falling off, while that for the moon flower holds on. Manettia cordifolia is regarded as better than M. bicolor for summer use.

Express Rates.

PLANTS—Completely boxed and packed so they may be handled without extra care 20% less than merchandise rate.

The above rate is made by the following Express Companies: Adams, American, National, Northern Pacific, Pacific, Southern, United States, Wells, Fargo & Co.

But the special rate should be asked for. Otherwise freight may be billed at full rates.

THE AMERICAN FLORIST CO.'S DIRECTORY AND REFERENCE BOOK

FOR 1894

CONTAINS THE FOLLOWING:

1. The names and addresses of the Florists, Nurserymen and Seedsmen of the United States and Canada, the exact branch of the business each is engaged in being indicated.
2. A separate list of firms that issue catalogues, the space devoted to each branch of the business in each catalogue being also given.
3. A list of the names and addresses of superintendents of leading parks in the U. S. and Canada.
4. A list of the principal cemeteries of America at which the arts of the landscape gardener and florist are used in beautifying the grounds.
5. A complete, alphabetically arranged list of Roses in commerce in America, with class, habit of growth, date of introduction, name of introducer, and brief, accurate descriptions of the flower of each. Synonyms are also plainly given.
6. A complete, alphabetically arranged list of Chrysanthemums in commerce in America, with class, and brief, accurate description of each. Synonyms are noted and varieties that are very popular with American growers are designated by a star, and this year's introductions by a dagger.
7. A complete, alphabetically arranged list of the Carnations in commerce in America, with name of introducer, date of introduction and brief, accurate description of each.
8. Seasonable Hints for the year, arranged in weeks, written by Mr. William Scott, and covering every detail of a general florist business. This is decidedly the most valuable contribution to the literature of the trade ever published. It is written in a plain, practical way, by a man who knows what he is talking about.
9. A historical sketch of the Society of American Florists from its organization to date, including officers for each year and lists of essays read at each meeting, with other information of interest.
10. A similar historical sketch of the American Association of Nurserymen.
11. A similar historical sketch of the American Carnation Society.
12. A similar historical sketch of the American Seed Trade Association.
13. Similar historical sketches of the Florists' Hail Association of America; of the National Chrysanthemum Society of America; of the Florists' Telegraph Delivery Association.
14. A complete list of all National and Local Trade Organizations, with names and addresses of principal officers, time and place of meetings, etc.
15. Statistics of Commercial Floriculture in the U. S. from the last census.
16. Statistics of the Nursery Industry in the U. S. from the last census.
17. Statistics of Seed Growing in the U. S. from the last census.
18. A list of Leading Horticultural Societies, with name and address of the Secretary of each.
19. Full information about Express and Postage rates on plants, shrubs, trees, seeds and bulbs

No less than 270 pages of valuable reference matter in compact form, and all UP TO DATE.

PRICE \$2.00 POSTPAID.

THE WM. H. MOON CO.,
 Morrisville, Pa.

Kansas City, Mo.

It has been high carnival here this week and the whole city has been given over to the people; it has been conducted by the Society of the Priests of Pallas. An immense ball was held Wednesday at which the decorations were very elaborate; taking one thing with the other the florists in general have profited thereby and it has served to open the winter trade which is anxiously looked forward to.

A visit to the establishment of the Probst Bros. Floral Co., presided over by their genial manager, Mr. Samuel Murray, revealed a place well kept and stock generally A1.

Several houses have been entirely rebuilt and an addition of two houses 80x20 erected. These contain at present single stem "mums" which look very promising.

The "chrysanths" in 6 and 7-inch pots which were being staked when your correspondent called are worthy of special note.

The new rose Mme. Philemon Cochet is having a trial; it is somewhat like Mermet, but more robust; the flowers keep their color and have good lasting qualities. White La France is also likely to prove useful. A house 86x20 of Perle and Sunset was great.

Mr. Murray grows for standard carnations the following: Daybreak, Lizzie McGowan, Portia, Fred Dorner, William Scott and Edna Craig; he is looking for a good all round yellow.

The city store has a useful adjunct in the conservatory at the rear, and is an ideal one for the purpose for which it is intended—a show house and a storage place for decorative palms, ferns, etc. Miss Murray is the presiding genius here and reports that trade has taken a decided turn for the better, with a better call for decorative plants.

R. S. Brown & Son have been building extensively this summer, remodeling entirely a block of nine houses, 150x125 feet, in spite of hard times. Their's is almost entirely a shipping trade and their stock of young stuff is well forward. Their mailing department is also of large proportions.

I noted quite a useful plant in *Asclepias curassavica*, very useful for summer cutting with its umbels of white, that keep well; *Vinca alba* is also planted out in benches and its flowers of white nearly two inches across are used largely for ground work in designs.

Crotons bedded out have proved a great success, coloring very highly in the full sun and making beds that have proved very attractive.

Begonia rex, a most complete collection, are good sellers; noticeable were Marquis de Peralt, Louis Cappe, Louis Closson, Count de Liminghii and Inimitable.

Roses, carnations and "mums" were looking well. Stock plants of geraniums were just being brought in from the open and potted into as small pots as possible, but before so doing were stripped of as many leaves as possible to economize room and to prevent rotting.

The Humfeld Floral Co., the three brothers Humfeld, have added one small house this summer, 50x12, for forcing *Lilium Harrisii*. Their plants all had a healthy appearance and the "mums" were well forward. A banana in fruit was causing quite a furor in the vicinity, it being an unusual sight for the "Packer City" people. H.

for \$3.00 per barrel.
Or would exchange for bench roses or bulbs.
EL PASO GREENHOUSES,
MRS. MAUD M. BRIGGS, El Paso, Texas.

St. Joseph, Mo.

L. J. Stuppy, who has recently returned from California where he has been on an extended vacation, has rebuilt this summer and added considerably to his "Mount Mora" greenhouses. Three short span to the south houses 100x20 and a forcing and propagating house equal span 60x18.

Mr. Stuppy is growing about twice as many chrysanthemums this year as last, the demand for better and larger flowers being on the increase. He has planted a bench for the first time this year and for an initial performance are fine; plants in 4, 5 and 6-inch were well grown and furnished to the pot.

Roses, two houses 125x25, including a fine bench of Beauties which do well in this district, gave great promise.

Daybreak is the leader in carnations and is apparently the best to resist rust and the other ills carnations are heir to.

One of Mr. Stuppy's specialties is flowering plants for the spring, which he ships in great quantities to the surrounding towns to be disposed of by the general store dealers, etc., cannas being in great demand.

At the "old place," where the downtown store is situated, are four houses 100x20 where many roses, carnations and the decorative palms, etc., grown.

J. N. Kidd, late partner of Newell & Kidd, is now running the greenhouses here, while Mr. Newell is engaged in the store trade at Kansas City. Mr. Kidd has about 15,000 feet, chiefly devoted to roses, carnations and chrysanthemums; the last named in 5 and 6-inch pots, looking particularly well; he has also some fine bench stuff.

Quite a lot of Perles are grown, Mr. Kidd considering it a fine rose for this section and freer from "bull heads" than in the east. Of carnations Hinze's White, Portia, Grace Wilder, Tidal Wave, and last but not least, Daybreak, are the varieties grown principally and were good considering the drouth. R.

HARRY BUNYARD says he has started as a grower. He is growing a mustache.

LITTLE'S ANTIPEST.

Valuable Discovery of the 19th Century.

SILVER MEDAL AWARDED

CALIFORNIA STATE FAIR OF 1890.

This preparation is a sure destroyer of the **Scale, Woolly Aphis** and **Insect Pests** of any and all descriptions. It may be as freely used in the conservatory, garden and greenhouse as in the orchard or vineyard. It is non-poisonous and harmless to vegetation when diluted and used according to directions. It mixes instantly with cold water in any proportion. It is **Safe, Sure** and **Cheap**. No fruit grower or florist should be without it.

183 MONROE STREET - CHICAGO -

Omaha, Neb.

A half hour's ride on the electric cars and a half mile walk brought me to the houses of Mr. A. Donahoe, who since he moved into the country, has built from time to time so that now he has some 50,000 square feet of glass devoted chiefly to growing cut flowers and plants for his retail store in the city.

What appeared to me to be rather a novelty were some designs, horse shoes, wreaths, etc., and a turtle (mock) made by entwining the *Davallia bullata*, which seemed to be perfectly at home, looking green and nice. Mr. Donahoe said they might have looked better but that the rats are very partial to *davallia rhizomes*; I suggested it was the "turtle" they were after.

A novelty in the rose houses was the staking. Wire is used but a loop is made at the top end and the wires are suspended saving the tie. Mr. D. has found it to work very satisfactorily.

In the carnation houses L. L. Lamborn is used for the short side benches; other varieties grown are Grace Wilder, Lizzie McGowan, Portia, Silver Spray, William Swayne and Anna Webb.

A great many single violets are grown and their foliage is very useful for cutting and using with the double when leaves are short. A big lot of "mums" are coming along in good shape. A house of La France roses is worthy of note, in fact all are looking well. Palms, ferns, and fancy foliage plants are grown for decorating and some *Pandanus utilis* in 6-inch pots, a very useful size.

J. Ederer has built a new carnation house 60x20 and an addition to his dwelling house.

Hess & Swoboda a carnation and rose house each 60x20. Mr. Hess says though trade was unusually dull during the summer he has better hopes for the winter trade.

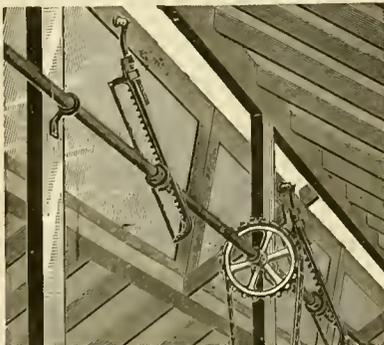

Quite a moral influence have the windows of the large saloons here, having much the appearance of a florist's store. I hear that they are kept in condition for a certain amount per month. N.

SEE HERE

BROTHER

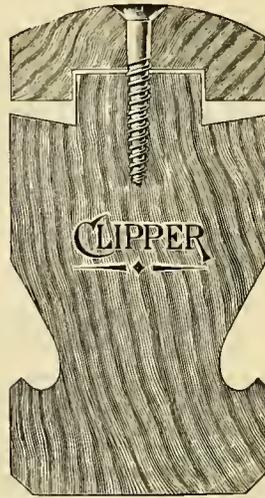

FLORIST!

Aren't you tired going through your houses two or three times a day year after year and lifting your ventilating sash one at a time and propping them up with sticks or pots, with a chance of having sash blown off and broken glass to pay for? If you are

Announcement to Florists.

We desire to announce the dissolution of the firm of Sipple Doppfel & Co., and to introduce to the trade its successor, The Syracuse Pottery Co., which will be under the management of William Doppfel and Conrad Breitschwerth. The business will be conducted as heretofore, except on a larger scale to meet the growing demand for our goods. We have accordingly enlarged our plant and capacity, and with unsurpassed facilities are now prepared to fill the largest order on short notice. Our latest improved machines are turning out the best and most serviceable flower pots in the market, and assuring you of our intention to lead in further improvements we solicit a continuance of your patronage in the belief that we can supply just what is needed at a price and in a manner satisfactory to all.

Send for price list and samples and we know you will give us an order.

ATLANTA, GA.—Wm. Plumb is just recovering from a severe case of typhoid fever.

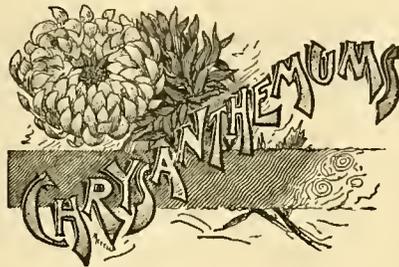

CHATTANOOGA, TENN.—The chrysanthemum show will be held November 6 to 9.

DIXON, ILL.—A chrysanthemum fair will be held here November 8 and 9.

PROVIDENCE, R. I.—Johnston Bros. have removed to a new store at 208 Westminster street.

CRAWFORDSVILLE, IND.—A chrysanthemum show will be held here this year by the Montgomery County Chrysanthemum Society.

ELMIRA, N. Y.—Mr. Grove P. Rawson has issued cards for his annual exhibition of chrysanthemums and other flowers, October 29 to November 7 inclusive.

Chrysanthemum Notes.

Now comes the crucial period to the chrysanthemum grower. He may have grown the best plants, tipped with the largest buds only to find that when the blooms open a large percentage of them will have petals that are brown or spotted, so great care must be taken now to bring the flowers out in prime condition. By the time that this article is in the hands of its readers the blooms will nearly all be, at least half unfolded, and liquid manure had better be dispensed with entirely. Keep a little fire heat on now during the night in the houses, it is far better to do this, and give a little night ventilation, than to go without the heat altogether, for the cold damp air is one thing that will spot the flowers. Stop all chemical feeding for probably there are more flowers tarnished by following this up too late in the season than from any other cause. This must be stopped before the blooms get into flower for we have known flowers to be tarnished by the soil retaining nitrate of soda where they had been heavily fed a week or two previous. Be careful in the watering; under no conditions allow the plants to become dry and do not go to the other extreme and keep them soaked, or the root action will be retarded and the bloom will suffer accordingly.

When the blooms are fully developed is the proper time to cut them and put them in a tub that is deep enough to hold 12 or 15 inches of water, and place them in a dark cool cellar, keeping them there for at least 12 hours, and then you will have a flower that can be shipped across the country, and if well packed, arrive in good condition. A great many growers cut the blooms too early, thinking that if cut when about three-quarters open and placed in water they will last longer, and perhaps they would if they were not again moved, but a flower fully matured on the plant and then placed in water in a cool place long enough to harden it, has more substance and will carry much better and stand longer on the exhibition table than one developed in water. Some growers are in a great hurry to be the first in the market, cutting half developed flowers and rushing them into the stores, and then wonder why when the blooms have stood in the windows for half an hour the leaves and flowers wilt down and look

worse than the paper chrysanthemums we have sometimes seen. Let the flowers get fully open and then let them stand in water at least over night, and they will keep fresh in the window all day.

When you are going around among the plants always have a pocketful of blank tags with you, and if the plant is wrongly named immediately tag it, if you want to save it and if not pull it up when you cut off the bloom, and throw it away. Wherever there is a tag that has become indistinct replace it with a new one; in fact, it is a good precaution against mixing the stock later to replace all tags now when the plants are in bloom. When you write the tags look up the correct name and write it out in full on the tag, and as Uncle John Thorpe once said if the name is so long that one tag won't hold it use two.
ELIJAH A. WOOD.

Notes on Chrysanthemums Taken October 16, 1894.

MRS. E. G. HILL. This was recommended as a very early variety, the disseminator claiming that it was readily gotten into bloom by October 10, but with me it will be from ten days to two weeks later than that time. It is a very tall grower, too tall in my judgment. Our plants are about seven feet high. These plants are being grown in a solid bed, which is no doubt the cause of them being later than they ought to be.

YELLOW QUEEN, another new one of 1894. This also was claimed to be an early variety. The date at which it was said to bloom I can not now remember. It is later than the one just mentioned. I like its habit of growth, however, much better, as the plants are a little over five feet high. In this variety those plants which are nearer the outer edge of the solid bed are the most early, showing, I think, that they are somewhat dryer, and this seems to hasten early flowering.

MRS. CRAIG LIPPINCOTT. I have not a fourth as many of this variety as I had last year. I was afraid to go into it heavier, fearing that the success we had with it last year would induce the florists growing for the Philadelphia market to grow large stocks of it; whether my judgment in that matter is correct or not remains to be seen. The plants this year, I think, look stouter than they did last year, but whether the flowers will be any better we can not tell for a few weeks to come, for two weeks anyway. They are not as forward as Yellow Queen, being the same distance, apparently, between the time of flowering of Yellow Queen, as there is between Yellow Queen and Mrs. E. G. Hill.

EUGENE DAILLEDOUZE. This certainly was the sensational variety last year. Whether we can grow it as well as Hill & Co., who sent it out, can only be told at the end of the chrysanthemum season.

Its origin is said to be from Kioto, and it certainly does partake of some of the characteristics of that good old Japanese variety. It may not be as beautiful in form, but it certainly is much larger, and is without the defect that the old variety has; namely, that of a weak stem. We will watch this variety with great interest, and hope to be able to have some good flowers of it at the proper time.

MUTUAL FRIEND. This was sent out last spring by a New England firm, and we hope it will be worthy of the good things that were said of it when introduced. It is a white variety and is more forward than either Mrs. Craig Lippincott or Yellow Queen, apparently, and a little less forward than Mrs. E. G. Hill.

MINERVA. This we heard very good accounts of last year, some going so far as to say it was very nearly if not quite equal to E. Dailedouze. It is earlier than that variety, much earlier, apparently, so that there will be no conflict on that account. It was sent out by Mr. May in the spring of the present year. In point of earliness it is equal, apparently, to the last named—Mutual Friend.

MARIE LOUISE. In point of earliness, with me, this leads them all. It is a pure white variety, and from it I expect good results. I saw it when I was in Chicago last fall, grown to a single stem as pot plants, and it was in good condition at that time, showing that it can either be a mid-season variety or an early variety, according to the time the cuttings are rooted and the way they are grown. We expect to grow it largely as an early variety next year, that is to say, if it turns out as well as it appears likely to do at this writing.

MRS. J. GEO. ILS. This is a variety which was sent from San Francisco to the World's Fair chrysanthemum show last fall, and on account of its great size, good form and excellent qualities generally it attracted more attention than any other kind on exhibition, I think. But owing to the long distance that it had travelled it was not in the best of condition on arrival. There were not enough blooms to compete in any of the classes. It seemed to have more petals to the flowers than any other variety that we have seen up to this time. It is inclined to be a little late, and I regret to say, somewhat rusty.

MAJOR BONNAFFON. This is another variety which created a favorable impression at the World's Fair. It was described as a yellow Ivory. Whether it will sustain that reputation it can not be told until later in the season. It certainly is inclined to be dwarf, at present, growing three feet high, where others that were planted at the same time under the same conditions are seven feet high. This is in about the same condition as Yellow Queen as to earliness.

MRS. JEROME JONES is a medium late variety, apparently. It is in about the same condition as to its time of flowering as Mrs. ILS. It has a fine foliage, and is altogether, apparently, a very useful sort.

MAYFLOWER is quite as early as Minerva, and appears to be very promising. **ERMENILDA** created a very favorable impression with all who saw it last year on account of its delicacy of coloring. It belongs to what is called the "pink class." It is about equal with Mrs. Jerome Jones in time of flowering.

MRS. BULLOCK, OR DOMINATION as it is more generally called outside of Philadelphia, is somewhat early, though not so much so as Marie Louise or Minerva.

NIVEUS. It may be a day or two earlier than Ermenilda. The stems seem stouter

this year with me than they did last, and I hope on that account that it will be better. This type, however, according to my judgment, is just a little too tall for practical purposes.

THE QUEEN. This also created a sensation last year on account of its purity of color and good form. This ranks with Niveus as to earliness.

J. H. TAYLOR. This would be an early variety under favorable conditions, ranking about as Marie Louise does as to time of flowering.

WM. G. NEVITT. We do not have much of this variety. It seemed affected with the disease which Golden Wedding had so bad last year, so that we can not recommend it.

H. L. SUNDERBRUCH is an excellent yellow, large, fine color, full, and we think will rank as an early variety under correct treatment.

M. B. SPAULDING. We have not enough to be able to say much about it at this writing, only having three or four plants.

PRES. WM. R. SMITH. This is tall, dignified, and in about the same stage of earliness as is Minerva.

ILLUMINATOR. Of this we only had one or two plants last year, but we were so favorably impressed with the large flowers which those plants produced that we felt encouraged to grow it quite heavily for this season's flowering, but unfortunately, it is not one of those varieties which can be gotten up in quantity, owing to its tendency to throw up flower shoots when quite young and small.

FASCINATION. Can not say much about this, as we have only a very few plants of it.

ADA H. LEROY is certainly a very strong grower, the flowers promising to be large and fine, and, judging from its present appearance, we think that it ought to be grown in large quantities.

There are two or three other kinds, such as Monarch of Ostrich Plumes, Miss Frances Thorley, Titian, Parthenia, and a supposed white sport from Eda Prass, and many others that we have here, but owing to the small quantity grown we can not tell anything about them until they are quite in flower.

IVORY. This good old kind has been justly pronounced one of the best, if not the very best chrysanthemum ever raised, but with me it has never yet done first class. As to earliness with me it is in the same class as Minerva.

NOTES TAKEN ON THE SAME DATE OF PLANTS GROWN IN BOXES.

We find, as a rule, that plants grown in this way produce flowers some days earlier than those grown in the solid beds. We must bear this in mind next year, so that we can grow all the early varieties in boxes, and all medium and late varieties in the solid beds. Marie Louise under this treatment is the first ready to cut. It certainly is a beautiful variety. Next, I think, we will name Marian Henderson. It is not as large as the last named, but being different in color they will be good companions as they come in almost together. It is a beautiful rich yellow color, similar in color to the dandelion.

MRS. WHILLDIN is apparently a day or two earlier than H. Sunderbruch, but as Mrs. Whilldin shows symptoms of disease it will hardly be safe to grow many of that another year, whereas Marian Henderson, which is quite as early and possibly a day or two earlier is healthy.

MRS. E. G. HILL is very much more forward as grown in boxes than it is when grown in the solid bed, consequently it

should never be grown in a solid bed for very early flowers.

VIVIAND-MOREL, which has been grown so successfully for the New York and other markets for some time past, has never been grown in very large quantities for this market, and as I have so few plants can not judge of its merits.

YELLOW QUEEN as grown in boxes is more forward taking it altogether than when grown in a solid bed, but it appears to be unhealthy, that is to say, the leaves have that rusty appearance which is so much complained of among several growers in different parts of the country. And as for Mrs. J. Geo. ILS the disease is very bad. I am afraid that it will be absolutely worthless grown in boxes.

MUTUAL FRIEND is a little earlier when grown in boxes than it is when grown in solid beds, but the plants are not quite so healthy as they are when grown under the latter conditions. This state of affairs in the case of boxes we are inclined to believe may be owing to lack of water at some period of their existence.

In three weeks from to-day most all minds horticulturally inclined will turn towards chrysanthemums, most of the others towards state and county elections. E. L.

CHRYSANTHEMUM LEAF SPOT.

Chrysanthemum Blight.

A large grower of cut flowers in Delaware Co., Pa., sends me specimen plants of chrysanthemums badly afflicted with a blight and states that the Golden Wedding and Lady Lawrence sorts are the most diseased. Many other growers of the chrysanthemum are troubled in the same way and a common question asked is concerning whether the blight will spread. Of course the remedy is asked for in every instance.

In the first place the disease is not a new one. Last season for example, it nearly ruined some varieties of chrysanthemum, the Golden Wedding perhaps suffering most.

In the second place the cause is a fungus of the genus septoria, at least the specimens from Pennsylvania show only this species. There are other fungi that prey upon the chrysanthemum but the septoria is the one to be charged with the destruction now under consideration. As is usual in the leaf blights it is the older leaves that show the disease most extensively, simply because the fungus has had a longer time to work in those leaves. The lower leaves become pale and turn brown in spots and finally dry up and fall away. The engraving shows a leaf that has several dark dead patches scattered among the yellow remaining portions of the leaf.

No systematic efforts so far as known to the writer have been made to check this disease, but from the similarity of this leaf spot to others that have been treated and in good degree subdued there remains but little doubt but that this blight could be held in check. For doing this there is no better known fungicide than the Bordeaux mixture. During the past summer this has been used with striking effect upon truck crops and there

is no reason why florists should not test the effects of this fungicide upon their crops.

BYRON D. HALSTED.

Exp. Station, New Brunswick, N. J.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

Keep a close watch on your ventilators now, for we are getting cold nights and the mercury should not drop below 50°. Commence firing if necessary to keep temperature at this point; 70° during the day is sufficient and 65° is better. Remember that it takes an even temperature to produce long keeping flowers, and this feature is one of the points that will bring you a good class of customers. The question is often asked, why flowers are so apt to go to sleep after a few days of cloudy weather. I believe the answer should be, because of a lack of water and too much heat during night and day. Do not be afraid to give plenty of air when it is raining; the moisture thus acquired is capital for carnations and is much better than using artificial sprinklers for it, also gives the plants elements from the atmosphere which can not be given them

in any other way. This treatment should not be followed during a very cold storm.

As the new growth comes into bud disbudding should be attended to thoroughly. Many claim it does not pay, and this is very true where the grower has a sale for short stemmed flowers at one dollar per hundred, or even a trifle less, but when growing for a large market disbudding is absolutely necessary, for the competition is so great to-day that only the very best flowers will bring a remunerative price, and the public demand stems with but a single flower the same as with the rose or the "mum." Does it not improve these latter flowers to disbud them? Does it not require a greater amount of strength to mature three or four buds than one? Certainly it does, and this fact is now acknowledged by all of the leading carnation growers. The result is that the average run of carnations now sold is vastly superior to those sold a few years ago, and the demand has increased far beyond the supply. This applies to A1 flowers.

Several of the leading retailers in New York say they could not get near enough last season and that if the growers would use as much care as the rose and "mum" growers do, they could use as many carnations as they do roses. A1 flowers of Scott, Daybreak, Albertini and others of this grade are bringing to-day two dollars and few to be had. This is owing (the scarcity) to the dry season we have had, but why not propagate a few thousand plants, grow them in beds and cover them September 1 with portable frames, where they can be watered and cared for? This is a mistake that most growers have made in the past, and I am among the rest.

Begin your propagating now; when the cuttings are well rooted plant them in a cold frame that can be protected during extremely cold weather and you will have fine stocky young plants for next summer and fall flowering. This is not guess work. There is a grower for the New York market who grew thirty thousand Portias in this way last winter and he has been cutting quantities of bloom all along, only his mistake was that he paid all his attention to one variety.

CHARLES H. ALLEN.

When to Plant Carnations.

I read carefully the notes of Mr. Allen in your last issue on carnations, and I must respectfully take exception to a part of them. Mr. Allen says "If the plants are taken into the houses the latter part of September and in bud they will mature a few of those buds, and then as a rule lie semi-dormant until late in January unless you have an unusual amount of sunny bright weather during December." Mr. Allen advocates planting in August and says he finished planting on August 25. If this is all the time you are going to give the plants out of doors you might as well not plant out at all, but pot them into a 4-inch pot and plunge in a frame. It seems to me that this advice is somewhat misleading, especially with some varieties. It may answer with Portia, Tidal Wave and some other varieties, but with Daybreak, Wm. Scott and Sweetbrier I know it is wrong. A little actual experience related is better than many words, and here it is:

I planted on the 25th of September, 1893, 380 Wm. Scotts. They were full of buds just about to open; not more than one dozen flowers had been picked in the field. I began to pick long stemmed flowers from the very day they were planted, and from November 1 on was picking

from 75 to 100 a day. Not a single bud was lost through lifting. By December I was getting stems 15 to 20 inches long. This bed was thrown out on the 25th of last month, they being on the bench just one year. The total cut of the whole year was 22,000, which allowed an average of 58 flowers to each. If I had not kept accurate account I would have said they yielded far more, but it must be remembered every flower picked had a stem and thousands of buds were sacrificed. If they had been picked as we used to 15 years ago the yield would have been treble what it was. In addition to flowers I pulled off 6,000 cuttings, and for that purpose took the strong shoot that came from the flowering stem. The day we threw them out last month 175 fine flowers were picked off them. I had Daybreak and Silver Spray in the same house equally as satisfactory and planted the same day or a day or two later. In another house I had a bench of Lizzie McGowan. They were bought from a neighbor, grand plants loaded with buds; they were not planted till October 7. No bench of carnations could do better almost from the day they were planted until August last; it was a continued pick.

I have been growing carnations for the past twenty-four years. In the old days we had only La Purite, Edwardsii and Pres. Degraw. In those years I have tried several dates for the various operations and I have found September 20 to 25 to be the date for lifting. If that date found your ground parched and hard I would sooner wait ten days till we had had a rain, when the plants would lift with all their roots and fibres intact, but I don't intend to write an article on how to lift carnations. If your soil is a pure sand, as perhaps Mr. Allen's is, then it would be possible to lift them during any period of drouth, but with the great majority of growers this could not be done. Carnations in many places looked very small on August 25, but by September 25 they had quite a different appearance, having had the benefit of the best month in the whole year for growth outside. The real vital question on the subject is this: The carnations should be planted sufficiently early, so they will be well established before fire heat is necessary. If planted about September 25 they have even in this northern climate a good six weeks before any fire is needed.

WM. SCOTT.

Carnations at Kennett Square, Pa.

The Chester county carnation growers seem to be in no special hurry to get their plants in. At several places the stock is just being housed. As to the effects of the dry weather on stock in the field, the plants vary considerably in different locations. At C. J. Pennock's, where clover sod was used and the soil was frequently worked, no bad results have been experienced, and most varieties are even better in appearance than usual. At Edward Swayne's the plants made an average growth. Wm. Swayne's are rather unsatisfactory. W. R. Shelmire says that outside of the seedlings his plants are the poorest lot he has grown for years, those from high ground being the worst; while on the contrary, J. H. Ladley's worst plants are those that he planted out in low ground, in anticipation of a dry season, and these show more or less signs of bacterial disease.

Dry brown leaves and spot are very prevalent all around. Some varieties had the lower half of the foliage entirely dead while in the field, and have transplanted

poorly, so that the appearance of the plants in the beds is anything but prepossessing. As a rule the seedlings seem to be the least affected, and many of them are perfect specimens of health and vigor. The varieties that have suffered most are Wm. Scott and Daybreak, which are in bad shape generally, and Lamborn, McGowan, Keller, Stuart and Buttercup, which are poor and small in some instances and fair in others. Thomas Cartledge suffered more than usual in transplanting, but is blooming well under the circumstances. The flowers of Sweetbrier are rather disappointing, as to size, still it has made good plants and has transplanted well. Orange Blossom is throwing some very good flowers. This pretty variety deserves to be grown more extensively than it is. Those who grew it last season say that it paid them well. Puritan, Portia and Grace Wilder are generally healthy and transplanted well. Edw. Swayne evidently has great faith in Ophelia, for he has 3,500 of it planted. He states that he has found it rather difficult to move. Buttercup shows a little bacterial disease generally. There is very little rust to be found in Chester county at present.

Mrs. Fisher has obtained great popularity here as a summer blooming variety. C. J. Pennock has been putting in 30,000 cuttings of this variety, in anticipation of next season's demand. Hicks has transplanted a lot of old Fishers from the field to the benches, and they seem to take hold well, and are giving a good number of flowers, which at the present time are very acceptable. Mr. Hick's place, now in its second year, although not large is very successful, and his stock is in fine condition.

C. J. Pennock and W. R. Shelmire both give much of their attention to the raising of seedlings. One of Mr. Pennock's seedlings, a large brilliant scarlet of similar color to the Stuart, and which was spoken of favorably a year ago, still holds good. Among the most promising of the seedlings here are two very fine white ones, which have stood the test of the past year well. Mr. Shelmire has a large number of seedlings in a wide variety of colors, most of them the progeny of Caesar. The worst characteristic of this variety as a parent is the tendency of its seedlings to come variegated. The raising of seedlings is not entirely without direct pecuniary results, as there is always a good demand in the market for these promiscuously colored blooms. J. H. Ladley has a pretty magenta colored seedling of good form and very prolific, which ought to sell well, in the prevailing fashion for magenta shades.

Chas. S. Swayne is another addition to the list of carnation growers at Kennett Square. His house, which is now nearing completion, is somewhat of a curiosity, and is the cause of much speculation as to its chances of success. It is 100x50 feet in size, without partitions of any sort, and as the land lies quite level the slope of the roof is but slight. Ten thousand carnation plants and two beds of violets is its capacity. Everything will be grown in solid beds. The entire front and back may be opened to admit air, and this is the only ventilation provided for. Hot water under pressure with all the pipes overhead is the proposed method of heating.

Lady Hume Campbell is the violet planted generally by the Chester county growers, Marie Louise being unsuccessful with most of them. The plants appear very vigorous and healthy. Wm. Swayne has a theory that violets left out in the

frames until they have experienced a few good freezes are more likely to withstand disease in the houses. This gentleman plants tomatoes in his houses between the carnations, allowing one row of tomatoes to every second rafter. From four houses he picked five and one half tons of fruit last season, for which he received an average price of thirteen and one half cents per pound. This appears to be a very profitable result, but there must have been considerable interference with the spring crop of carnations, and it is a question as to the advisability of sacrificing the carnation crop for the tomatoes. The seed is sown in November, and the first fruit is ready in May, the heaviest of the crop being picked in June. The variety grown mostly is Mayflower. Trophy is said to be the best fruit when a crop can be obtained, but this variety is always uncertain as to crop. Lorillard, from the fact that it has less foliage to keep the sun off the fruit, is regarded as the best midwinter variety. Wm. Phillips has a fine house of tomatoes with fruit already well set.

Carnation Nomenclature.

The following carnations have been registered the past summer. There are quite a number of new seedlings being named this season, and in order to avoid confusion and the duplication of names growers will consult their own interests by having them registered at once. Send their names, a short description of their characteristics, and, if convenient, their pedigree, to Albert M. Herr, Lancaster, Pa.

Mapledale (Nathan Smith & Son, Adrian, Mich.).—A cross between Daybreak and Mrs. F. Mangold; pink.

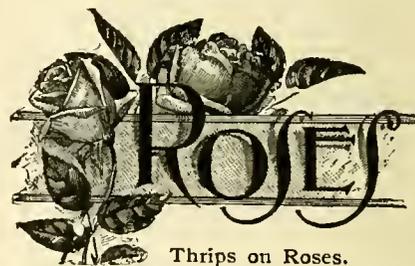

Bride of Erlescourt (Miller & Son, Toronto, Canada).

Little Gem (H. E. Chitty, Paterson, N. J.).—Striped pink on a white ground; dwarf.

Corsair (H. E. Chitty).—Scarlet; dwarf.
Minnie Cook (H. E. Chitty).—Pink and white.

Alaska (H. E. Chitty).—White.

Magnet (H. E. Chitty).—Carmine pink; fringed.

Thrips on Roses.

What will kill thrips on roses? I have tried smoking heavy, placing tobacco stems through the house, and syringing with fir tree oil, but nothing has had any effect on the thrips. W. C. W.

Replying to your correspondent "W. C. W." about thrips affecting roses, there appears to be but little chance of destroying these without sacrificing the crop of buds now on the plants, from the fact that these little pests make their way in between the petals of the flowers before it seems hardly possible to do so and when there it is simply impossible to reach them with any insecticide syringed or sprayed on them as the petals are so closely wrapped one over the other that no water or solution can enter them.

OLEANDER WITH SPREAD OF TWENTY-FIVE FEET GROWING IN A BERMUDA GARDEN.

Many years ago, when growing grapes, I had a terrible hatch of these little pests on the vines and the only way I could exterminate them was by heavy fumigating the house every night for a week in succession and even after that we had a few, presumably some later crop, but two or three nights' fumigation finished these. To do this with a crop of roses means to destroy every bud.

Some three years ago these little pests badly injured a crop of Madame Hoste in the spring; we treated them about as we did the grape vines above, at the same time picking off every bud where the calyx was expanded and burning them; this cleared them out of the house. Such treatment I know means considerable loss but I know of no other effectual means of destroying them. I should have mentioned that we found it helped matters considerably by heating a piece or pieces of sheet iron red hot, then carrying the same in a tin pan or similar thing into different positions in the house, having previously divided up one ounce of Cayenne pepper into same number of parcels, on each sheet of hot iron spreading the portion of pepper, starting at the end farthest from the door and working back to the same as quickly as possible. This should be done during the time the house is full of tobacco smoke, but if W. C. W. wants to try this he and his assistants will have to be very lively if he does not want to get choked to death, as burning Cayenne pepper is no subject to play with, and if the thrips get only a very small portion of it they will certainly choke to death sneezing. This being purely a vegetable compound a reasonable amount does not injure the plants if not allowed to flame.

JOHN N. MAY.

Black Spot on American Beauties.

"G. L." inquires what is the best treatment for American Beauties badly afflicted with "black spot." Replying to the same would say that we have tried a great many kinds of treatment and so far have been unable to find anything better than a good healthy atmosphere at all times in the house, which means that the plants should not be allowed to suffer for want of moisture at the roots, neither should they be over watered, particularly where the leaves are much stripped off the plants.

There is not the least doubt, I think, with those who have looked carefully into the subject, that a great deal if not all the trouble comes from impaired root action caused oftentimes by a sudden check, but not always so, and it is very certain that as soon as the leaves become badly affected the roots suffer to a corresponding degree, hence more care is required about the watering.

When tracing this matter down to the starting point I think it will be found that the root action has very much to do with it, which may be caused from lack of some element in the soil or an impaired constitution, which over forcing has very much to do with. Generally this trouble commences when the nights begin to get cool enough to form a little moisture on the foliage at night, this in conjunction with insufficient air and particularly allowing the temperature to run up too high in the morning before putting on air, and once it gets started it is very hard to check till quite cool weather sets in when the temperature will be reduced to normal point.

From my observations I am convinced that the hybrid tea family will not stand the strain of hard forcing without affect-

ing them; that the pure tea varieties will and I think that if we adopt a treatment a little nearer nature's laws we shall succeed better in the end. We may not produce quite so many flowers but what we do get will be of better quality and our plants will be much more healthy, which in the end will more than repay us. True, there are no two cases where the cause or effect are identical, but taken as a whole the results are generally nearly the same, but I think we can hardly arrive at a clear understanding of this trouble till we can thoroughly sift the whole thing down by scientific research, which will require our soils to be analyzed and the conditions of growing them fully defined; till then we can only partially guess at the trouble, its treatment, etc.

If G. L. will carefully look into this subject as it effects roses planted in the open ground or groups out of doors in anyway I think he will find that invariably it shows itself first after a sudden check in the growth either by too little water while the plants are in active growth or an extra amount of the same enough to sodden the ground, at least such have been my own observations, and by trying as much as possible to avoid these conditions we shall be at least doing what we can to avoid subjecting the plants to the trying ordeal. This disease is very contagious. I have recently seen a house where the American Beauties got badly affected with this disease which after a little spread to Brides and Mer-mets in the same house till they were looking as bad as the Beauties; I have seen several other cases where the effect was the same, and no chemicals, so far as I have been able to find, has any effect in stopping it.

JOHN N. MAY.

The American Rose Society.

In a late issue of the AMERICAN FLORIST, under the above heading, Mr. May gives notice of the reorganization of the American Rose Society, and outlines a few points wherein the organization can benefit its members as well as the trade at large. There are none who can question the truth of the points spoken of, or who cannot see, after due consideration of the subject, innumerable ways in which the society would be a benefit.

We are all learning something in regard to the rose every season, the beginner as well as the cultivator of a life time. We are many of us making experiments which tend to the improvement of our product and quite a few doubtless are working on the same lines. The results of these experiments and observations are valuable, having cost time and money, but after they have been conducted to a successful termination and the feasibility of the various ideas demonstrated, how far does the knowledge spread? Many times not outside of the place where they were worked out, and probably in the keeping of one or two persons or possibly they are spoken of and a fellow craftsman, to attain the same results, is forced to go through the entire experimental stages to be certain he has the idea fully grasped with the consequent loss of time and labor. Now, in the first instance had there been some recognized association for the tabulating, and outlining of experiments, as well as for keeping track of those tried, with the various surrounding causes and conditions, the duplicating of experiments would become unnecessary where the conditions are the same.

The society could greatly improve existing conditions in regard to the sale of cut roses; as is well known many growers think their stock the best going to market, and are consequently disappointed when it fails to sell, even though the reason be that better stock had the call. By establishing shows both the grower and public could be educated up to the best produced, and the former need it as much as the latter; also by encouraging the grading of stock sent to market and establishing a fixed standard for the different varieties the poorer stock would be kept where it belongs.

Then again take new varieties; what a vast saving could be effected if the faults as well as the merits of varieties being introduced were known, and how can all this and much more be accomplished better than by making the Rose Society a success?

It has been said that the formation of a Rose Society would be for the benefit of the larger growers, but nothing can be further from the truth. The large growers are much more able to stand alone, and do their own experimenting than the smaller ones, but at the same time they recognize that the interests of all are better served by uniting. If persons interested in the rose in any way whatever, would take the time to give this matter a little thought the rose society would have such a membership that it would be a success from the start, and would do more to advance floriculture than anything that has occurred as yet in America.

ROBERT F. TESSON.

Roses at Madison, N. J.

Among the Madison rose growers the most noticeable fact the present season is the general abandonment of the *Mermet* and substitution of the *Bridesmaid* as a standard variety in its stead. The *Bridesmaids* seem to do well with everybody.

At Frank L. Moore's, where this variety originated, there are several benches of two year old *Bridesmaids* and *Brides*, which promise well. These were pruned and tied down in succession from August 10 to September 10. Cousins are looking fine, as they always do at this establishment. Mr. Hugh Lee has had full charge of the house for the past six years.

Mildew has given more than usual trouble to the Madison growers this season. The establishments of L. M. and L. A. Noe, from their exposed position, have been special sufferers from mildew, but more anxiety is felt regarding the depredations of a minute insect which has been making havoc among L. A. Noe's American Beauties. The insect is greenish white in color, and is probably allied to the thrips. Its movements are very rapid, running and skipping like a flea. It attacks the Beauties when they are in a young state, disfiguring the bud so that it is rendered useless. Where Beauties are grown by the thousands, as they are here, the loss is very heavy. This insect is apparently not an entirely unknown visitor, as one grower claims to have had some experience with it on *Hoste* and *Bride* last spring. It is suggested that it may have its origin in the manure. No effective remedy has been found; burning of the infested buds is advised.

Black spot has been making terrible ravages among the American Beauties at T. J. Slaughter's, and has spread considerably among the *Bridesmaids* and other varieties. The disease attacked the Beauties in August, since which time it has defied all efforts to eradicate it. Mr. Slaughter attributes it to the sudden changes in the weather in August. Whatever may have been the cause, it has certainly been a discouraging and costly experience for him, as the plants cannot be expected to do much before January.

D. M. Shannon has added one fine rose house 160 feet long, also a violet house, and increased his shed room. The *Bridesmaid* looks well here. Stock at "Rose-dale Hill," James Hart's new place, is doing finely. Mr. Hart has three houses completed, and two more are to be built. He consigns his flowers to himself up to date.

The Growers' Club of Madison have found in the wicked commission men a fruitful subject for discussion in their meetings. According to one speaker in the last session, the commission men are getting all the milk and the growers all the water; according to another, the growers are being robbed outright. It is no unusual occurrence to find two or three rose men in a retired corner comparing their return slips; sometimes these conferences last well into the night. A committee representing the club, Messrs. Ryan, Charlton and Shannon, were commissioned to interview some of the New York wholesale men, with the purpose of getting the combined product of some dozen or more of the smaller growers marketed at 10 per cent commission, but the commission men say it is impossible for them to do this and live; so there the matter rests for the present.

Miscellaneous Seasonable Hints.

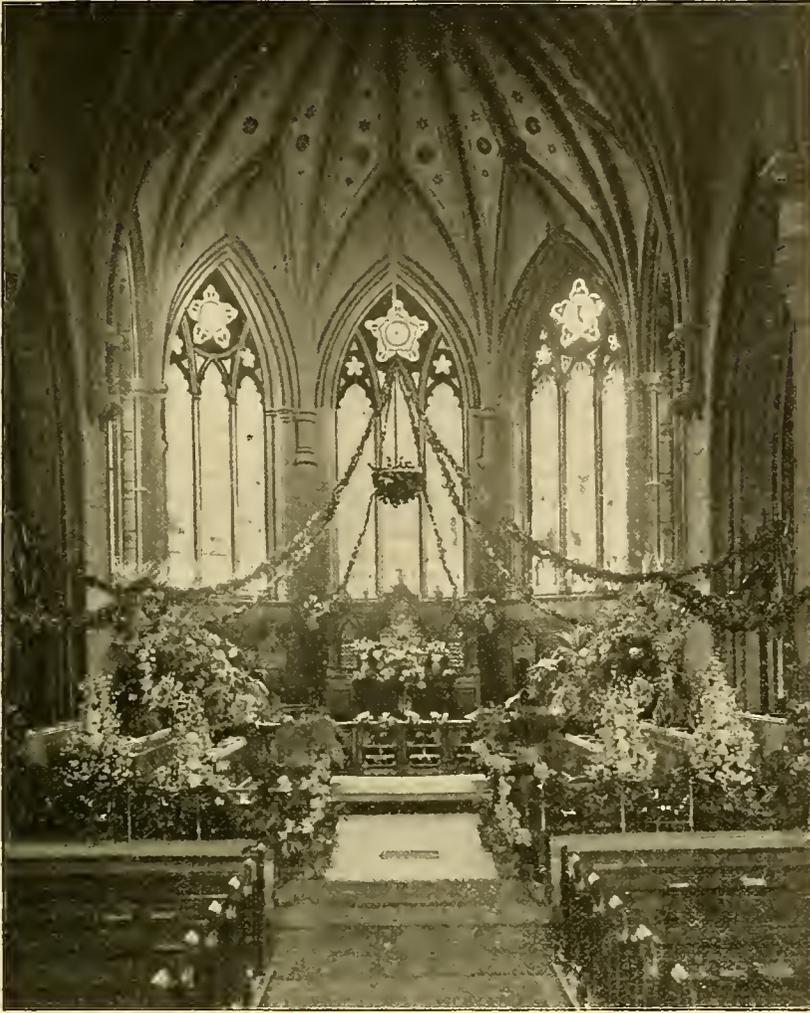

As soon as the bedding plants are destroyed or become unsightly, and they mostly are so at this writing, it will be time to plant with tulips, hyacinths, etc. Tulips have taken a tumble and so have all the other Dutch bulbs, and it is your duty to let your patrons know that a fine bed of tulips can now be furnished for a comparatively small cost. There are hundreds of people in every large city who

send away to some other city for a so-called collection of bulbs, attracted by some wonderful pictures and what appears to them a low price. These collections are largely a humbug. What your customers want is just what you buy for your own growing. At 6 inches apart a 6 foot circular bed will hold about 125 tulips at 3 cents each, which will leave you a good profit and cost the customer only \$3.75. A 12 foot bed will hold about 400 which would amount \$12. The price I quote is for the very best bulbs of the standard varieties, such as *Yellow Prince*, *Waterloo*, etc.

The soil for tulips and hyacinths should if possible be of a sandy texture; they will grow and flower in any soil, but a rich sandy soil is much the best for them. I have had occasion several times to say that for forcing hyacinths and tulips any old soil would answer the purpose and that is true, as you only want to force out the flower bud that is already formed and the bulbs will be thrown away, but with beds outside it is different. You tell your customers that they can lift the bulbs at the end of May or in June and store them away and plant again in October, so you want a rich soil that the bulbs can increase and make good bulbs for another year. In Holland they are grown in a deep black sand saturated with cow manure. Plant the bulbs deep, that is a good 6 inches down. In some way or other I always find they get near enough to the top before flowering; besides when deep the roots are not so liable to be affected by the changes of temperature in early spring. About 6 inches apart is the right distance to plant for hyacinths, tulips and narcissus. If you or your patrons want to be extravagant you can plant closer; the flowers will be just as fine. There is no need of any covering until hard freezing sets in with us about December 1, and then don't cover too heavy; 2 inches of litter from the stable is enough. They can be planted any time before winter sets in, but the sooner the better now.

It's not necessary to plant the high priced named varieties of hyacinths; a much cheaper grade will do as long as you have them in their colors. In tulips the same standard varieties that you force for winter will make the most satisfactory beds outside, with some double ones for late beds if desired. A selection can be made from the following: *Keizerkroon*, although not good as a forcer because it drops its petals, is grand outside; *Yellow Prince*, *Chrysolora*, *Waterloo*, *Vermilion Brilliant*, *La Reine*, *White Pottbakker*, *La Precieuse*, *Cottage Maid*, *Joost Von Vondel*. If you want a still greater variety there is *Prosperpine*, very fine but also very expensive, *Duchess de Parma*, *Duc d' Orange*, *Bride of Haarlem* and many others. A little later than these will come the early doubles, and very showy they are, but they should be planted in beds by themselves and not mixed with the singles. The best of them are *Imperator Rubrorum*, *Murillo*, *Tournesol*, red and yellow and *Tournesol yellow*, *Rex Rubrorum*, *Couronne d'Or*, *Couronne des Roses*, *Salvator Rosa* and others. For very late flowers, and it pays the florist well to have some plants, a few thousand *Parrot tulips*; they will come in in the latter part of May. *Yellow Rose* is another splendid late tulip, cheap bulbs but the flower is fine. If you are not cramped for room a lot of the late tulips will well pay you, for some of them can be had at *Decoration Day*, when flowers are usually very scarce.

The double and single garden narcissus

CHURCH DECORATION FOR A WEDDING

are very useful. If you are asked to plant any for a customer don't recommend a bed of them, but plant in clumps in the mixed border. They will do well undisturbed for years. Here is a brief list it will pay any florist to have on his place: Von Sion, Alba plenus odoratus, Trumpet Major, Ajax Princeps, Incomparabilis and Incomparabilis Stella, Poeticus ornatus and many others.

Your imported azaleas will soon be here. Don't fail after trimming the ball of roots down to the desired size to soak them for a minute or two in a tub of water; this is of the greatest consequence. Use a flat blunt stick when potting and ram in the soil tight. If you let it loose as you would pot many soft wooded plants the water would pass through the new earth and the roots of the azalea would get little benefit from the watering. Keep them in a cool house or pit with an occasional syringing and you need not lose one of them. WM. SCOTT.

Church Decoration for a Wedding.

The accompanying illustration was engraved from a photograph sent us by Mr. Sackville S. Bain, Montreal, who arranged the decoration. In response to our request for a description of the arrangement Mr. Bain writes:

"On the altar was placed a magnificent specimen plant of *Hydrangea hortensis*,

whose pink shade gave a softness and grace to the otherwise all white flower work, and being the center flower blended in perfect harmony with everything around. On either side stood vases of Bride roses and maidenhair fern, while over the edge of the altar and along the front hung smilax and white flowers as if planted by nature, giving it as natural an effect as possible. On either side of the altar was placed a large mound of palms, some of them eight feet high, dracænas, hydrangeas (Thomas Hogg), spireas and ferns. This clump was raised high enough to have the tops of the plants above the line of the stained glass windows, giving them a look of proportion to all around. The rails of the altar were looped with Boston laurel and placed between each loop was a spray of white flowers. The choir seats came in for a good deal of attention. Along the front were hung loops of Boston laurel, and between each loop a large spray of marguerites, while from the aisle came a plant with one above to match, each meeting and blending with natural grace. The carved end of the choir as seen in the plate was converted into a huge spire of white flowers, marguerites, lilies and green. Overhead were graceful festoons of Boston laurel; these ran into each light in the chancel and were tied with large sprays of white flowers. The center light over the steps of the altar, under which

the bridal party stood, was turned into an immense bouquet of flowers, one of our local papers puts it this way: 'The church was resplendent in everything that nature and art could bestow to make it a scene of fairyland, and through this flowery grove walked the four fairies clad in misty robes of white, while against the dark green background the white blossoms seemed as lovely and pure as a snowdrift.'

New York.

Chrysanthemums are beginning to assert themselves. It is not yet apparent what the attitude of the flower buying public is to be towards the chrysanthemum this season. Some of the leading florists maintain that it is a dead issue and that its standing in the fashionable market is settled for good. In support of their position they point to the lack of demand for the early blooms now coming in. The reception given the main crop, however, will be the test and no one can tell much about it until then. It is probably true that the demand for early chrysanthemums is now more than met and that there is no fortune awaiting development in this direction. The standard of quality demanded, too, has advanced more rapidly in the case of the chrysanthemum than with any other flower. The exhibitions are responsible for this. Buyers are looking for the grade of blooms they have become accustomed to in the shows and anything inferior to that grade is distasteful to them. There is no flower that is sold on its merits so closely as the chrysanthemum today.

Orchids are starting in well with every indication that they will be more generally used this season than ever before. *Cattleya Bowringiana* is now coming in abundantly and shows up superbly when judiciously used for decorative purposes, especially under artificial light. Magentas are all right when handled by a discreet artist. A mass of *Odontoglossum grande* containing many hundreds of blooms, set in a bed of *Adiantum cuneatum* and *Farleyense*, and backed by *Erica hyemalis* and palms shows up beautifully in Thorley's window and constitutes a novel display that attracts thousands of admirers. Thorley's new electric sign with its 130 lights makes a great show. It is the most brilliant spot in Broadway in the evening.

Warendorf is an enthusiast on autumn decorations and has few if any rivals in this line. The possibilities in this direction are well exemplified in his window on Broadway, where oak and maple boughs, fruiting shrubs and rare flowers are artistically combined to form a most beautiful picture.

Mr. John H. Taylor's regular autumn entertainment to a dozen selected friends came off at Garrison's, Bay Side, last week. From the enthusiastic account given by those who were so favored as to be present, it is very evident that Mr. Taylor's reputation as an entertainer is still in the ascendant. These occasions are always arranged so that the partakers will have a vivid recollection of them until the time comes around again to have another.

The North Hudson County Florists' Club will hold its first chrysanthemum exhibition at Haas' Hall, West Hoboken, on November 7 and 8. Over \$1,000 in money premiums, besides cups, etc., will be offered, competition being open only to members of the club. The close of the exhibition will be signaled by a grand ball.

Max Mosenthin, of New Durham, celebrated his return from Europe by entertaining the members of the North Hudson County Florists' Club at supper at John Hellstern's, on the evening of October 9.

Henry Simonson, of Brooklyn, has been getting considerable notoriety in the daily papers on account of a domestic quarrel, followed by a scuffle with the police, in which Simonson got the best of the affair for the time being, but which resulted in his being held for examination on a charge of assault.

Thomas Nilan, another Brooklyn florist, was found on the floor of his room on the 6th inst. with a self-inflicted razor gash in his throat. He was locked up to answer for attempted suicide.

Rudolph Jabn, of Nostrand avenue, Brooklyn, was married on October 10. Here we have at least one Brooklyn florist who is happy.

Philadelphia.

A great many of the chrysanthemums in this district are in a bad way. They are suffering from something and what that something is seems to puzzle the most of the growers, while there are some who shake their heads and shrug their shoulders in such an "I told you so" manner as to leave no doubt that they know all about it. The men whose plants are affected call it rust, or say they have the chrysanthemum disease. One went so far as to say it was contagious, because he noticed after the grasshoppers got into his houses the plants became affected and he thinks they must have carried it from his neighbors whose plants were down with it before his. One grower said they had caught cold from wet feet. Another claims it is the gout brought on by too much high living, in other words it amounts to this, that they have been overwatered with manure water and other like stimulants until their systems broke down. Some varieties seem to do well, while others alongside are badly affected. It is a serious matter for some, as whole benches are ruined. Mr. Heacock is cutting some very fine Mrs. Hill, superb flowers, first were cut on the 12th. Mrs. Whilldin is also in and a few Mrs. Gerard from Mr. Becker of Oak Lane. The varieties now in are Mrs. Whilldin, Mrs. Hill, Mrs. Gerard, Mme. Bergman and Kate Brown, with Ivory and a host of others in sight. \$1 to \$2.50 is the price per dozen so far.

Roses are quite plentiful; Beauties are getting into shape and \$2 per dozen is now asked for the best. Selected teas bring \$5 and \$6, while good ordinary are sold at \$3 to \$4 per hundred. For job lots \$1 per hundred is considered fair. Carnations are improving but there are still many imperfect flowers from buds formed outside and brought into flower under glass. The best bring \$1.50, the others from 75 cents to \$1. Swainsona seems to be in demand. Mr. Cliffe of Germantown has a house planted with this flower alone, in a solid bed, and it seems as though it would be a profitable crop. Cosmos is plentiful at all prices from 40 cents per hundred to almost nothing. Smilax is \$12 to \$15, asparagus \$50 to \$75, maidenhair 75 cents to \$1. Double violets are to be had at 40 to 50 cents per hundred, small as yet.

Meeting of the Penna. Horticultural Society Tuesday evening, the 16th inst, was well attended; it reminded all very much of a Florists' Club gathering as nearly everyone present belonged to that organization. The nomination of officers was postponed until November. The proposition of the Florists' Club to

guarantee a fund of \$500 to decorate the Academy of Music for the chrysanthemum show was accepted.

The committee having in charge the inter-city contest reported having had numerous replies and a probability of from eight to ten exhibits. It was proposed to make the premiums \$100 in gold instead of a vase as at first proposed, and this may be carried out. Everything points to a grand show, Mr. Gurney Hill is coming on with a host of his very best flowers and these will make a show of themselves. The building will be elegantly decorated, choice music will be rendered afternoon and evening and other new features added.

The building committee reported progress and thought the prospects for a new hall in the near future seemed bright, some \$50,000 had been subscribed and more was in sight. Dr. Mears desired the appointment of a committee to consider the advisability of dividing the society's work into sections, which might during different months in the year bring in reports and have papers read pertaining to their section, and thus have an interesting subject for discussion each evening. The plan seemed to meet with approval and a committee will be appointed to take the matter in hand. K.

Chicago.

Chrysanthemums are beginning to come in freely. A number of growers were apprehensive a few weeks ago that the main crop would not be ready for the opening of the exhibition, November 3, but there seems to be no ground for fearing now that the bulk of the leading varieties will not be in good time. Such weather as we are enjoying at present will push stock forward at a lively rate. All the retailers are carrying a good line of "mums" in stock, but the demand is hardly up to former seasons. Stock must be gilt-edged to bring \$5 per dozen at retail. For this stock the wholesale dealers ask \$3. The average price for good blooms, however, doesn't go above \$2. Southern grown stuff, of which there is more than enough, goes at \$1. In yellows the best at present is Golden Queen, with Whilldin next. Mrs. E. G. Hill still leads in pink. Few really fine white have made their appearance. Ivory in small quantity is good.

In roses the demand for Beauties is steadily increasing. A1 stock has advanced to \$2.50 a dozen; medium, according to length of stem, from \$1 to \$2. The smaller varieties are beginning to feel the effects of the increasing supply of "mums," but prices as yet are stationary at last week's quotation. Carnations are steady with good demand; exceptionally fine disbudded stock bring as high as \$2.50, average grade \$1.50. White is still very scarce. There is a good demand for violets, but no really good doubles are seen on the market; the best of them, and cripples at that, bring \$1.50.

The supplying of wood ferns for the needs of our market has grown into quite an industry. The enormous quantities disposed of is surprising; 100,000 is the average number disposed of by our commission dealers per week, over 5,000,000 in a year.

One of the notable events of the week was a wedding in Hebrew circles which was held at Concordia Hall. The bride being a sister of the Peiser brothers, of the firm of Kennicott Bros. Co., quite an array of our local talent assisted in the decorations, which were very elaborate. All the material which went into the decoration was of the best the market af-

forded. Some 2,000 fine Meteor roses were used for the tables and window banks. Geo. Bayer of Toledo, Ohio, sent on a lot of carnations especially for the purpose which were the best seen this season. Notable among them were Golden Gate, Lizzie McGowan, Wm. Scott and Hector.

The judges of plants and cut flowers at the coming chrysanthemum show will be Messrs. Wm. Scott, Buffalo; Grove P. Rawson, Elmira, N. Y.; and A. W. Bennett, Pittsburg. The floral arrangements will be judged by a committee of Chicago ladies of which Mrs. J. J. Glessner will be chairman.

Among recent visitors were Messrs. C. H. Allen, Floral Park, N. Y.; John Nelson, Oshkosh, Wis.; E. Haentze, Fond du Lac, Wis.

Buffalo.

A very pleasant and well attended meeting of the Florists' Club was held on the 9th at the residence of Mr. C. Keitch on Southampton street. A letter from Philadelphia was read asking us to make an exhibit of 100 blooms of "mums" at their show in November. The majority thought we ought to do so and a committee to arrange for it was appointed. A member expressed it as his opinion that we should not come out in the same position that we did bowling. Of course not; we don't expect it, we don't want the earth and all that there is in it. The feature of the evening was a paper read by Mr. Edw. Mensted on "Good and seasonable flowers for the year." It was a most excellent paper and should be printed. It jogged the memory of all of us on many useful flowers we are apt to overlook.

Outside stuff is clean gone now and flowers are scarce. The scarcity will soon be over for "mums" are here; every store has a few and another week will see them in abundance. The few that have been offered have sold readily at good prices so there is not the least fear that "sassiety" is going to give them the cold shoulder. If any one doubts the strides we have made in floriculture this past ten years let him close his eyes in sweet retrospective reverie and look back at his chrysanthemums of ten years ago and open his eyes on a house he has to-day; he will almost faint with an exuberance of his own self conceit. There are not many heavy events taking place as yet, but a goodly number of lesser ones bring the business up to the average for this time of year.

Mr. W. J. Palmer, Sr. met with a painful accident about two weeks ago; in excavating for a large boiler he was descending a ladder to see how work was progressing and in some way slipped and fell 5 or 6 feet, badly spraining an ankle which confined him to the house for two weeks.

A most lamentable accident befell the family of one of our most popular and well known men, Mr. John N. Scatchard, on Sunday afternoon; his wife's sister with two of his beautiful little daughters were taking a drive through the suburbs. They halted on the tracks of the N. Y. C. R. R. to let the belt line passenger train pass, but neither heard or saw a freight train come thundering along on a down grade. It threw carriage and occupants high in air and killed them all. It is the saddest occurrence of its kind that the writer ever remembers in this city.

A call at the houses of Wm. Scott this week showed me 4 houses of "inums" looking very fine; one house 100x20 filled with plants in 6 and 7-inch pots were the

most even and best looking lot I have seen. He planted them in 5 inches of soil late in June and lifted and potted them the first week of September. Many of his Lincolns and Ivories are 2 feet across, with 25 perfect flowers and green to the pot. I wish Mr. Wood would give us a cure, or better still, a preventive for the rust; it has made its appearance on several varieties.

W. S.

Boston.

Trade continues fair for the season; white flowers of all kinds are in good demand, with no heavy overstock of anything. Outdoor flowers are about wound up, although there has been no frost here until the night of October 15, when frosts more or less severe were reported from all directions. The shipping trade has started off satisfactorily, but is confined principally to points north and east of here as yet.

Chrysanthemums are coming in all colors now, and the number of varieties obtainable would make a long list. The Mrs. E. G. Hill and Yellow Queen blooms being cut by David Allan are easily the best flowers on the market at present. Roses vary greatly in quality, first-class Mermets, Bridesmaids and Brides finding a sale at figures which indicate that these three closely related favorites will remain for the present season in the position they have hitherto occupied in Boston, at the head of the list. In carnations the chief sort is last year's favorite, Daybreak.

A very fine exhibit of the late flowering varieties of perennial asters was made at Horticultural Hall on October 13 by Geo. Hollis. Included in the number were Shortii, a noble variety from Ohio; oblongifolius, from the south; turbinellus, a native of Missouri; tartaricus, from the northwestern states; Tradescanti and the garden varieties, Rubella and Fair View.

The much discussed subject of a national floral emblem was up for consideration one afternoon at the Food Fair which is now running in Boston. It was a big occasion for the ladies, who made speeches and read and recited poetry in the interests of their favorite blossoms, golden rod, arbutus, pond lily and columbine each finding warm defenders. The object and workings of the Massachusetts Floral Emblem Society were outlined and plans laid for future agitation of the subject.

Charles E. Patten was recently fined fifty dollars for malicious mischief in destroying palms and geraniums in the Public Garden. The same party was fined for stealing a plant from the same place a few weeks ago.

W. E. Doyle is fitting up a fine establishment at 306 Boylston street, which he will run as a branch store. Several other additions to the list of Boylston street florists are talked of, and this street is destined to usurp the position held so long by Tremont street as the great floral thoroughfare of Boston.

In town: Benj. Durfee of Washington, D. C.

Grand Rapids, Mich.

Schmidt Bros., heretofore engaged in the marketing business, have added to their already extensive trade that of florists and have erected for that purpose two houses, one 20x100 and one 11x100.

F. M. Strong, who has added a violet house 100x11 this summer, has taken his energetic foreman, Mr. F. M. Cunningham, into partnership, and the firm will trade under the title of the Grand Rapids Floral Co.

The Central Floral Co. have made additions to three houses, extending them 20 feet each, and a new front which will serve as a show house 65x22.

The Wealthy Avenue Floral Co. built during the summer a carnation house 120x20 and a violet house 60x12. X.

SITUATIONS, WANTS, FOR SALE.

Advertisements under this head will be inserted at the rate of 10 cents a line (seven words) each insertion. Cash must accompany order. Plant ads. not admitted under this head.

SITUATION WANTED—By a young man in greenhouse or store. Some experience. Reference. J. M. HAFPE, Piqua, O.

Take Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

THE ONION SEED situation is as usual at this time of the year, watched with much interest and the conditions for predicating an intelligent opinion on the outcome more difficult than usual. That the trade is but poorly satisfied with the ruling prices on onion seed the past few years is generally admitted. Considering the amount of seed produced, the carrying cost, the rapid decrease in value, onion cannot be said to have been an attractive investment. Will it redeem itself in the spring of 1895. That the trade itself is much to blame for this condition is true. Onion in the seed trade has been like the sugar of the grocer, a commodity to be handled at approximate cost, and strong competition has unfortunately maintained this condition of affairs even in the retail mail business. The catalogue firms of the country would be glad to have it otherwise but how to establish by concerted action fair prices has been a difficult problem. Is this the year for a change? We have advices from men well posted on the California crop of this season estimating the same as low as fifty per cent of that of 1893, and all admit a shortage of Red Wethersfield and Globe Danvers. Conceding fifty per cent. to be an extremely low estimate and the possibility of slow trade in 1895 there is to-day in view of these crop estimates and the opportunities for fair profits which have not been realized in recent seasons apparently good cause for all concerned to fix 1895 onion prices with more than usual caution, and if possible set figures that will return a good margin of profit.

Definite wholesale prices are hard to secure at this date, most houses evidently awaiting a more settled condition of affairs before fixing their rates; quotations seem to vary about as follows: Globe Danvers \$1.00 to \$1.50; Flat Danvers .75 to \$1.25. Red Wethersfield seldom quoted but occasionally at \$1.50; Strasburg \$1.00. Whites little asked for yet.

In this connection we shall print in our next issue the views of several leading houses, some of them quite radical, concerning the unnecessary low rates which have prevailed on onion seed.

THE Northrup, Braslan, Goodwin Co., have just closed a contract at Minneapolis for a new fire-proof building, 80 feet frontage by 125 feet in depth, 5 stories high, to be erected on the site of the old Market House, Bridge Square. It will make a most admirable location for this enterprising firm.

BIRCHALL BROS. & Co., claiming to be bulb, seed and plant growers and importers, Southampton, England, indulge in such peculiar methods in transacting their import and export business that transactions with them should be entered into with caution.

L. L. MAY & Co. are moving into their spacious and elegant stores 25 and 27 W. 5th street, St. Paul, Minn. They will occupy three floors and basement, 45x125 feet, and may well be proud of their new quarters.

H. R. BASSLER, formerly at Manhattan, Kansas, is now with the Lovett Co. at Little Silver, N. J.

JOHN T. BUCKBEE has returned from Europe.

Cincinnati.

Chrysanthemums are the main topic, and they are fast making their appearance; they come from the far south, the east and west, and we are now shipping them north. The first to make their appearance in this market was a white seedling which was received on October 5, and sold at 20 cents. Kate Brown and Mrs. E. G. Hill were second, and arrived on October 8. Yellow Queen was expected, but did not put in an appearance until about the 12th; Gloriosum and Whilldin are now coming in good form; the prices secured by the commission houses range from 8 to 25 cents. So far the demand has been equal to the supply, but soon we expect to have every nook and corner filled with them. Business with the commission men is good, but our retail stores are not finding trade so good as they expected, and "mums" are selling slow with them. Beauties have advanced to 20 cents and are all sold as fast as received. Carnations are in good demand. Roses of all kinds are moving; shipping trade good.

The monthly meeting of the Cincinnati Florists' Society was held October 13 with only a fair attendance. It was decided that the Jabez Elliott Flower Market should be opened for one week, commencing November 14, for the sale of "mums" and other plants, also for a display of seedling blooms to be held in the society rooms.

Gustav Adrian, who for the past ten years has been gardener for Gen. Gorham, has built four greenhouses in Clifton and will now branch out for himself. Market plants and cut flowers will be his specialties.

Mr. H. A. Kresken had some heavy orders in funeral work lately. Huntsman & Co. will open a store on 9th near Race.

We regret to announce the death of Mrs. Lotta Schwarz, wife of Henry Schwarz, who died October 14.

Wm. Bertermann and Henry Rieman & Son were callers this week. Mr. B. reports business improving in Indianapolis, and predicts a grand success for their chrysanthemum show next month; if push has anything to do with it certainly will be a success. W. F. Law of Shelbyville, Ind., was in the city. G.

New Catalogue (No. 4) containing over 1000 Ornamental Cuts for Florists' use, such as envelopes, letter-heads, bill-heads, cards, advs., floral designs, etc., at from 30c. and upward. Price of Catalogue 25c. (deducted from \$1.00 order).

W. C. COOK, Supt. 70th & Adams Ave., CHICAGO.

Mention the American Florist when writing to advertisers on this page.

Kansas City, Mo.

Since cold weather has made its appearance business has improved considerably. A run around the different establishments finds them all in better spirits than for some time. Jas. Payne has two houses of roses looking very well; his carnations are in fine order, and there is a good crop of mignonette and heliotrope in prospect. At Albert Barbe's roses look especially well, and he is watching his "mums" all the time.

Garner Bros. have rebuilt all their glass this summer, three each 20x75. One house is devoted to roses, which are looking fine, one to carnations and one to mixed plants. They have a fine plant of Strelitzia Reginae in flower.

Arthur Newell, who has the most fashionable class of trade in town, reports that business is getting better and keeps him hustling.

Baker Bros. have their place as usual in fine trim. Their stock of Adiantum Farleyense, some 5,000 plants in 3 to 8-inch pots, is worth going many miles to see. Roses, carnations and violets are also looking well. None of the latter are in pots. They never fail in producing good Farleyense and violets.

The Heite Floral Co. can show "mums" by the thousands, in pots from 5 to 16 inches, and looking fine. Mr. Heite wears a big smile and says he is in the "mums" this fall, 150 varieties are grown, and a large display will be made at the show, which will be given at Armory Hall by the ladies of the Lutheran Church, November 7-9. A few roses and carnations are grown, but the home establishment is mostly devoted to pot plants, the cut flowers being grown at their place at Merriam, Kans., under the charge of C. Heite Jr.

Despite the hot dry summer carnations all around are looking well. Daybreak and Edna Craig are planted very extensively. From a trip around among the boys we find prospects for good cut flowers much better than ever before. There is more than double the usual quantity of "mums," and they are in better shape. In roses there is an increase, especially American Beauty, at least 100 per cent more than ever before. Business is just fairly good, but not what it ought to be; bulb trade hardly begun.

Mrs. Hampton is again in our midst, but says it is hard to get good prices; not like ye olden time, when they got \$6 a dozen for roses that it is hard to get \$1.50 a dozen for now. Times change, and we grow older and wiser. S. M.

CLEMATIS PANICULATA, from 3-inch pots, \$5.00 per 100. From open ground, strong plants, \$15.00 per 100.
 AMPELOPSIS VEITCHII, from 3-in. pots, vines 2 to 3 feet long, at \$5.00 per 100; \$50.00 per 1000.
 HONEYSUCKLES, EVERGREEN & HALLIANA, \$6.00 per 100.
 GOLDEN, \$7.00 per 100.
 ROSA WICHURIANA & RUGOSA, \$8.00 per 100.
 General line of Flowering Shrubs and Vines. See new trade list.

TO TAKE PLACE OF WIND MILLS

A Windmill
Is unreliable because it depends upon the elements for its power; hydraulic rams also depend upon favorable conditions and waste as much water as they secure. Steam pumps require skill and hand pumps demand labor and time. The

DE LAMATER-RIDER OR DE LAMATER-ERICSSON Hot-Air Pumping Engines
are especially designed for pumping water, and from shallow streams or any kind of well. They are simple, safe and reliable, require no steam and have no valves. They require very little heat to operate them, and can be arranged for any kind of fuel.

Send for illustrated catalogue to THE DE LAMATER IRON WORKS, 87 South Fifth Av., NEW YORK, N. Y.

OLD MAN CACTI.

291 Amity Street, FLUSHING, Queens Co., N. Y.

Toronto.

On Saturday last business at the market was really quite lively and the florists having stands there appeared to be in the best of good humor. One can easily imagine what a treat it must be to a man to feel the sensation of a pocket full of money pressing against his body after having gone through a long dull season when often there was a positive vacuum in the said pockets, and no doubt this was the sensation that tickled the market on Saturday and made it brim full of smiles. The weather has been decidedly colder the last few days, some snow flurries and a sharp frost or two, and coal will now be an item in a florist's expenses. However, the clerk of the weather has been instructed not to turn on the "very cold" tap until after the chrysanthemum show is over and to spin out the Indian summer as long as possible.

The meeting of the G. and F. Association on Tuesday promises to be a lively one from the rumors I hear flying about town. There is, however, a lot of business connected with the chrysanthemum show to get through with and possibly the "lively time" may be indefinitely postponed. Perhaps it would be better so.
E.

Chrysanthemum Notes.

There is but little that can now be said further in regard to the culture of the chrysanthemum for this season, for the blooms are very nearly ready for market or for exhibition, except that care must still be taken in the ventilation and watering, for a good bloom can yet be ruined. But there is one thing that can be done now that may materially help the crop for next year, and that is the selection of the stock plants. Some growers make it a practice to bed out a plant or two of each variety in the open ground in the spring, and allow them really to take care of themselves during the summer and early fall, and then place them in a cold frame that will keep them safe from frost until they are wanted to propagate from, and then bring them into the house. They argue that by this method they get stronger and more healthy cuttings than they would from the plants which they claim have been forced by high culture so much that their vitality is impaired. Now we have always believed that this is a wrong theory to work on, and does not produce any better stock, and we all know that standing still really amounts to falling backward in this bustling world. It might be all right if the plants were well cared for during the summer and the best of the stock selected for this purpose, but, too often, alas, the plants that are set outside for stock are those that are left after planting or the sales are done, and consequently the weakest and poorest of the whole lot. We most decidedly believe in selecting the best plants in the bed for stock purposes, so when the plants are in flower take a clean label and mark the strongest and those that produce the finest blooms for the stock plants to propagate from next year, and you will find that all the weaker varieties will steadily improve in vigor rather than deteriorate as some have said. This matter first came to our notice some years ago when we grew exhibition plants; of course the best plants, consequently the strongest, were always carried to the show and were usually sold or given away rather than go to the expense of getting them home, and after two or three years of this custom the varieties on which we always counted to produce a fine, strong plant began to lose their health and strength and were discarded

as run out. But after we began to grow blooms on benches and select the strongest for our stock, these same varieties again picked up and showed their old time vigor.

Next week will see the opening of the exhibitions, and the following two weeks will see every city of any size in the country report the result of their exhibition, so a word to those intending to exhibit may not be amiss. The names of the judges you now probably know, and if you don't a line to the secretary will inform you, so make the resolution now and keep it, if your habies don't happen to receive the first prize that you will not stand around and kick and find fault with the decision of the judges. If you don't think the judges are capable keep your blooms at home or send them to some other city where there are judges whom you think able to fill the positions, but when you place your blooms or plants in the allotted place in the exhibition hall you virtually say that you are willing to abide by the decision of the judges, and if you don't land on top say nothing, for if you begin to complain you lose the respect, not only of the management of the show, but of all your friends beside. And now a word to the winners. Bear your honors as meekly and quietly as possible. We know what it is, for we have occupied both positions, winner and loser, and when we were fortunate could hardly help feeling elated. But when you win be sure and remember one thing, and that is that you do not raise the standard of your own blooms or win the regard of anybody by depreciating the stock of your less fortunate competitor. Always keep in mind that there is another year coming and another day when the under dog may be on top and you will be the one to wander home with head and tail hanging down. So bear your honors as quietly and gracefully as you can and be careful of that unruly member and then you will never have to eat an unwholesome dish of crow. ELIJAH A. WOOD.

A Chrysanthemum Interview.

"Good morning Mr. Hill, we notice that the variety Mrs. E. G. Hill varies somewhat in earliness with different growers. Can you explain why?"

"No really good grower who is up to date, and desires first quality blooms, should set his plants in the solid border, for the reason that the roots go down into the cold earth and get beyond the control of the grower. This applies to the late as well as to the early sorts. The use of the two methods accounts for the wide difference in time of flowering of the variety Mrs. E. G. Hill, and we are surprised that so good a grower as Mr. Edwin Lonsdale should use the solid bed method. As a matter of fact Mrs. E. G. Hill was cut in a number of places from the 5th to the 10th of October and that

GLENFIELD, PA.—Chas. Crow has started in the business here.

BUCKSPORT, MAINE.—Mr. F. H. Moses has been seriously ill with the gripe. He states that the past season at Bar Harbor has been the best in his experience.

LOUISVILLE, KY.—Business has picked up wonderfully the past week. Chrysanthemums are very plentiful and we have ready sale for them. Yellow is the predominating color this fall. S. J. Thompson had some large funeral orders the past week and wedding decorations. We predict a fine trade this winter.

in considerable numbers, but in every instance they were grown on shallow benches and not in the solid border. Our experience has been that by planting in solid beds you may retard a variety a considerable period of time but in no instance can you cut as fine blooms as when grown on the bench system, because with the latter you have absolute control of the root action of the plant as well as of the top."

"Do you not know any one variety that would be benefited by the solid bench system?"

"I do not know of one."

"Do the flowers grown in solid beds have any more substance than those grown on benches?"

"They do not have as much substance and do not last as well; you might as well expect to get an athlete into the best physical condition by keeping his feet out of the window and his head in a hot room as by growing your 'mums' in a cold damp solid border."

"Tell us your experience in regard to feeding."

"In the applications of manures you can cater to the wants of the plants when on the bench far better than when grown in the solid borders, for in the latter the drainage may be deficient, and in that case a stimulant could only work harm; the application of manure or manure waters tends to sour the soil unless conditions are all favorable, and especially is this the case where the variety is of dense growth and clothed with foliage down to the ground. We begin feeding when the buds are set, and we give manure and other dry or solid fertilizers the preference for early feeding, as at this stage of their growth they get an abundance of water, and consequently the stimulant is not taken up so rapidly and in such quantity as if liquid manure is applied directly; later on manure water is very useful."

"Tell us about the application after the plants show color."

"In my judgment most growers overdo the matter in the way of feeding; they give too heavy doses and apply it too frequently. A case in point: last week one of our benches containing a considerable number of varieties in less than two hours after the application of what we considered a moderate dose of manure water had developed bad cases of petal 'burning' on nearly all the varieties on which were flower buds from $\frac{1}{2}$ to $\frac{1}{3}$ developed. A great many growers have thought that this damping of the petals was caused by too much moisture in the house, but from careful observation we are convinced that it is produced by over-application of liquid manure and too gross feeding."

"Does not this experience tend more to prove that feeding should be discontinued after the plants show color than that there is any special danger of overfeeding in general?"

"Unquestionably it does, and we shall promptly discontinue the use of any and all fertilizers after the buds begin to show color."

"How would you measure the amount of manure water or other stimulants to be given to chrysanthemums? What is the limit of the quantity that can be used to advantage?"

"This can only be determined by a study of the general characteristics of a variety, its growth, leafage and texture, and as in the case of individuals, food must be administered only as it can be thoroughly digested; when the root action is perfect and the soil porous and sweet a

larger amount of nutriment may be administered and can be readily assimilated. Many more chrysanthemum flowers are spoiled by over feeding and over watering than by the lack of sufficient food. The Chinese varieties are very quickly overfed, and some of the Japanese are quite as susceptible. We know a case in point where a large crop of Mrs. E. G. Hill had been ruined by simply over watering upon imperfect drainage. The injury showed in the lightening of the leaf and in its becoming diseased, resulting in a fungous growth which eventually weakened the plant and robbed it of half its substance and beauty; the leaves presented the appearance shown in the engraving on page 263 of your issue for October 20. Last year our plants of Mrs. Hill ran up to about 6 or $6\frac{1}{2}$ feet; we noticed that it took up large quantities of water and made rapid growth; this year we gave it what would have been considered an under-supply of water, while still never allowing it to flag, and the result is fine stocky plants 4 feet and under in height, with not a trace of disease or thinness of texture. Of course if planted in April or May it will run up in height under any form of culture. In a last reference to this variety it may be useful to note that very cool treatment, or growth in a solid border, deepens its color very much and brings out an objectionable violet tint, while an early ripening of the wood and quick growth render it the soft pearl pink that it should be; it received honors in England early in this month and is described as a 'beautiful silvery grayish bluish colored Jap.'

"One of the causes of weakness in the chrysanthemum is the fact that most growers perpetuate their stock by propagating from plants which have been forced and fed and grown unnaturally under glass. We attribute much of our success thus far achieved in growing chrysanthemums to the fact that we propagate from stocks that are grown naturally in the open ground and that never have been inside of the glass structure, save when propagated. So much importance do we attach to having naturally grown plants for stock that we go to the extra expense of purchasing the novelties in sufficient quantity that we may have two sets, one for the production of flowers and the other to be grown naturally outside and from which to propagate.

"Another important factor in the growing of chrysanthemums is to give all the air possible, and the ventilation should be perfect. With this end in view the ventilation should be so arranged as to give a continual current of fresh air during the summer months. This does away with the two story plants complained of by so many. The aim should be to ripen up the growth as the plant progresses and to give only such quantity of food as the plant can readily assimilate during its progress."

"What are the general characteristics of the varieties that will stand the heaviest feeding?"

Those of medium, short-jointed growth with moderate, medium sized leaves and that show considerable substance of texture in the leaf."

"What are the general characteristics of the varieties that you would feed moderately?"

"Varieties with moderate constitution, the leaves of which are thin in texture. This class is very easily injured by over-doses of water, and we have known instances where the health of hundreds of

plants has been destroyed by simply over watering with pure water."

How would you feed the coarser growing varieties?"

"The coarser growing varieties, if over fed, tend to coarseness not only of leaf but also of petal and flower, whereas if grown according to natural methods without much stimulating or fertilizing material these otherwise coarse growers often make well finished flowers. Take for instance the variety Challenge, this is very susceptible to injury at the time of setting its buds, and if either over-fed or overwatered at that stage of its development the buds turn brown and wither. Some writers attribute the blasting of buds at this juncture to the result of insect agency, but we have demonstrated that it comes from the application of fertilizing material at the time the bud is just forming."

"Do you think the chrysanthemum has reached perfection and completion?"

"No, I do not. There is still plenty of work to be done; we are yet in quest of the ideal pure true pink; and we very much need a full assortment of clear colors in October flowering varieties of size and form as found in the later varieties so that we may have our exhibitions beginning in October and not be under the necessity of holding all the shows during the first two weeks in November; I do not suppose that the rose growers are praying for this sort of an extension but they may as well make up their minds to surrender October and half of November to the 'mum.' To mark the progress recently made, we predict that the additions of 1894 will mark an epoch in the culture of the chrysanthemum; Queen Elizabeth (Owen), a charming anemone; John Bunyan (Owen), golden anemone; Mayflower, (May); Mrs. Magee (P. & M.); Mrs. G. Bramhall, (P. & M.); Challenge, (Hill), Inter-Ocean, (Hill); Robt. Owen, (Owen); Pitcher & Manda, (P. & M.); Dailedouze (Hill); Mme. B. Giraud, (Calvat); Minerva, (May); Mutual Friend, (Mann Bros.); Marie Louise, (Witters'aetter); Judge Benedict, (Spaulding); even at this date show marks of extraordinary excellence over previously existing sorts. The exhibitions of the Columbian year will long be remembered for the grand novelties presented to the public."

National Chrysanthemum Society.

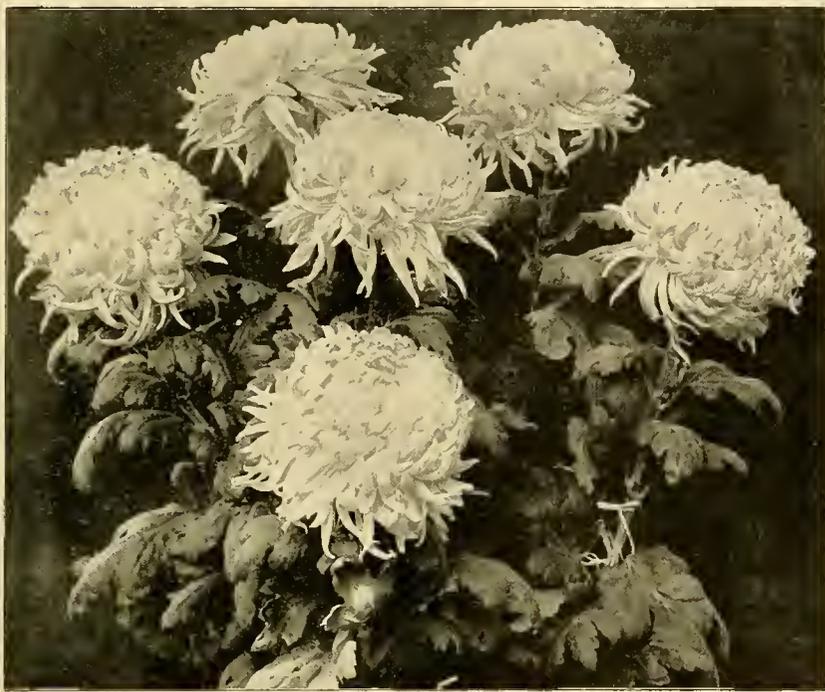

In accordance with the announcement in our issue of October 13 the committees of the National Chrysanthemum Society of America met October 20 at the several points named to pass upon the merits of new early varieties submitted for judgment. While the reports are not yet in such shape as to make it possible to announce the awards made we append reports as to the flowers shown.

AT NEW YORK.

The announcement that the committee of the Chrysanthemum Society of America would be in session for the purpose of examining seedlings on October 20 brought out an exhibition of some fifteen new kinds from several of the large growers. Among the most promising varieties shown were the following:

From Pitcher & Manda, Short Hills, N. J., J. E. Lager, a large deep yellow Japanese in the style of Jos. H. White; J. H. Troy, a creamy white incurred Japanese, an immense flower full and deep.

From Thos. H. Spaulding, Orange, N. J. Mrs. J. W. Parker Jr., Japanese incurved, color pæony pink with silvery reverse; a very solid bloom with the char-

NEW EARLY YELLOW CHRYSANTHEMUM MISS M. M. JOHNSON

acteristics of a good shipper. Edith Smith, a large Japanese reflexed, white suffused with faint lilac pink, appeared rather soft.

From J. N. May, Summit, N. J. Venus de Medici, violet rose color; florets mostly tubular, foliage handsome. Sunrise, Japanese incurved; light terra cotta with oak reverse. Nemesis, white reflexed, long petals. Daybreak, Japanese incurved, a lovely shade of delicate pink, unlike anything yet introduced. Only one flower of the latter was shown, its blooming time being already past.

From Chas. Bird, Arlington, N. J. Lettie Bird, reflexed yellow in the way of President Hyde. Size scarcely large enough for present demand. Sallie B, white with yellow center; similar in form to Lettie Bird; also under size.

From Richard Gardner, Newport, R. I. Nada, The Lily, white Japanese reflexed; petals long, drooping, irregularly twisted.

Wm. Tricker, Clifton, N. J., showed blooms of Chas. Davis, a sport from Vivian-Morel; color apricot yellow.

AT BOSTON.

There were but three entries of seedlings at Horticultural Hall under the Chrysanthemum Society of America arrangement. T. D. Hatfield entered two and Fred S. Walz of Cincinnati, O., one. Mr. Hatfield's were Mrs. T. D. Hatfield, a fine lemon yellow incurved, and Columbine, a bronzy red Japanese incurved. The Mass. Horticultural Society awarded a first-class certificate to the Mrs. T. D. Hatfield. Ella Walz was creamy white in color in the way of Marie Louise, but much inferior to that variety. Pitcher & Manda exhibited two seedlings, No. 561, in the way of Ivory but not so good, and No. 21, a large full double yellow of fair quality as shown. J. Brydon exhibited two vases of magnificent chrysanthemums, one of Ivory and the other H. L. Sunderbruch, the latter one of the 1893 introductions. It is a very beautiful and distinct yellow Japanese, and as shown it

made one of the finest vases of chrysanthemums ever seen in this hall.

AT CHICAGO.

E. G. Hill & Co. of Richmond, Ind., were the leading exhibitors here. The varieties were as follows:

Miss M. M. Johnson, a golden yellow, of perfect color for so early. The flower was fully developed, foliage good and carried well up to the blossom, size of bloom extra for so early. Three stems were shown, each bearing three fine blooms, an evidence of much vigor. Awarded certificate.

Majestic, a sport from Mrs. E. G. Hill, pale salmon pink in color, very close to the shade of the Daybreak carnation. Identical with Mrs. Hill except in color, the advantage in color being that it was free from the blue tint that sometimes detracts from Mrs. Hill. A certificate was awarded subject to the approval of the society, as while a new variety it was not a seedling.

Sea Shell, a majenta pink, straight tubular reflexed, not fully developed. Further trial advised.

Allamanda, yellow reflexed. No place for it with Miss M. M. Johnson in the field.

R. Witterstaetter, Cincinnati, showed Debutante, white, center incurved, outer reflexed. Not far enough developed to warrant passing an opinion. Further trial advised.

From Fred Walz, Cincinnati, came Ella Walz, a cream white reflexed. A pretty thing but in the opinion of the committee there are better ones now in commerce. Rosa Kupferle, majenta pink, type of Mrs. Irving Clark. Not developed enough to show its possibilities.

AT CINCINNATI.

The only exhibitor here was E. G. Hill & Co. of Richmond, Ind. There were four vases containing 6 blooms each.

Miss M. M. Johnson, which was recommended for a certificate, is a yellow, somewhat resembling Challenge in color and

form. Foliage heavy and close up to flower.

Majestic, a sport from Mrs. E. G. Hill, nearly white, of the same form and habit as Mrs. Hill. Considered by the committee to be no improvement upon that variety.

White Cloud, a Japanese variety somewhat resembling Mrs. Langtry but much earlier.

Allamanda, a good yellow very much in the order of Whilldin but deeper shade. Probably a good early and worthy of trial though probably not so good as Yellow Queen in texture, form and size.

AT PHILADELPHIA.

There were but three varieties of chrysanthemums for the special committee of the Chrysanthemum Society to pass judgment on.

Of these, two were from Hugh Graham of this city.

Daybreak is a very light, delicate pink, resembling Daybreak carnation in shade. It is of the Japanese type, somewhat globular in form, about 6 inches in diameter, full and of excellent substance. Certificate recommended by the committee.

Princeton, a bronze or old gold shade, lighter than and somewhat similar to Source d'Or. Japanese type. Flowers graceful in form, about 8 inches in diameter, and foliage handsome. Desirable on account of its earliness.

Ella Walz, sent by Fred Walz, Cincinnati, O., is a creamy white of Japanese type. A promising variety, its chief merit being its earliness. Further trial recommended.

Judging the Seedlings.

It seems to me that the committees of the Chrysanthemum Society should be prepared to pass upon seedlings about November 1 also. By the present program they do not meet again till November 6. It is rather a long stretch between October 20 and November 10. What do they expect us to do with seedlings that are at their best between those dates.

J. S. WILSON.

A Fable by Aisel.

ED. AM. FLORIST: There is an old saying about burning a candle at both ends to the effect that although you get an abundance of light, it is very destructive to the candle. Some of our chrysanthemum specialists seem not only to be burning the candle at both ends but are taking out a large section from the middle to grace their cow hides with.

Last winter I was feeling awfully poor—hadn't made coal hills, and Charlie Foolemall had just busted and stuck me for,—well never mind how much; but it was more than enough. Just at this time along comes our smooth friend Jones. Says he, "Hello Aisel! How's biz?" Says I, "Rotten." Says he, "What's prospect for next year?" Says I, "Rottener." Says he, "Grow any mums next season?" Says I, "Nixey! Got enough." Then he got right down to business and if he isn't a slick talker I'll never kick again. Says he, "You're way behind the times, Aisel, my boy; 'mums' are just what you want to grow, but they must be 'mums' with a big C. You want to throw out all those hack numbers and stock up fresh. What you want is to get in ahead of the other boys and have the market all to yourself. Then when the other fellows come in you want to be on deck with something bigger and better than they've got and you'll swamp 'em. They won't be in it and you'll make a barrel, see!"

Now if there is any one thing I have

longed for during the years I have been peddling flowers around town and cursing the commission men, it is to have the market all to myself. Jones saw at once that I was hooked and proceeded to load me up with his stuff at about the rate of one dollar per leaf with a little cast iron stem thrown in for good measure. He sold me two hundred of one kind, warranted four weeks earlier than any other on earth (market all to myself on this one sure), there was a real genuine yellow, yellow one, and a white that wouldn't go into a bushel basket without crowding, and a hairy one he called W—sh H—sing and declared would beat any Kansas senator for beard, and a dozen others. The bill was \$349.75, but I wanted and was bound to have the market all to myself, so paid it and stood off the coal man another six months.

It wasn't long after this that I found out that Jim Silly and Hank Blumenschnitter and Dumm Kopf had all been loaded up by Jones just as I had been, but didn't mind that very much as we fixed up a pool and arranged to divide the market so I would still have a quarter of it all to myself.

Well! the other day I cut my first lot of blooms and they were fine as silk, must give Jones credit to that extent. I sized them up and as I didn't want to be too hard on the boys, though I had the market all to myself, decided to let them go for \$12 per dozen. J. T. Anthemis, over on Wabash avenue, is an old customer of mine and an awful nice fellow so it was no more than fair to give him the first show. Was considerably surprised when I went in, to see his store full of fine "mums," and I'll be hanged if he would look at mine. Says he, "Aisel old man, I've no doubt your stuff is fair, but I've made a contract for daily shipments from Jones, and of course you are not in it with him. He's got the original stock and grows for exhibition, whatever he gets on the side is clean profit, and he lets me have this stuff at a price that would knock you silly." You bet I was knocked silly, for every place I went they sang the same song. I even tried a Greek and he said "You no gooda; me buya da 'mum' from Jones." I left the stuff at a commission house and it is all there yet.

I hear that Brown and Robinson have been seduced by Jones' bad example and are turning the same tricks.

Now, Mr. Editor the above is no josh and I'll leave it to you if it doesn't come pretty close to a confidence game.

I shan't have the market all to myself but I'll have Jones. Blumenschnitter and I have got 24 of those new yellow chrysanthemum bugs and we're going to breed 'em and turn the whole colony loose in Jones' greenhouses. Besides that we are getting up a boycott a la Debs, and will stop the paper if you print any more of Jones' adv's.

Yours truly, his

M. X AISEL.
kick

P. S.:—Have just stood off the coal man another six months.

Chrysanthemum Mrs. E. G. Hill.

I see that Mr. Lonsdale is apparently not pleased with chrysanthemum Mrs. E. G. Hill. I wish he could see the house full of it which J. D. Brenneman is now cutting here—magnificent flowers on tremendous stems, clothed with foliage down to the ground. For an early chrysanthemum it beats everything I have ever seen, "out of sight." Mr. Brenneman has been cutting the flowers for about ten days. For the editor's delectation, I cu-

close a blue print from a Kodak negative, made October 17. The cheerful face of the grower, Mr. Papsch, will help give a comparative idea of the size of the flowers. [The photo showed some grand blooms.—Ed.] So far as I can see, there is nothing the matter with Mrs. E. G. Hill as an early "mum;" and the way the flowers sell in Philadelphia, Mr. Brenneman seems satisfied with, too!

J. HORACE MCFARLAND.

Exhibition Advertising.

The management of the Indianapolis show is sending the newspapers advance notices on printed slips accompanied by a card bearing the following:

On presentation of this voucher at the Box Office, Tomlinson Hall, November 6, 7, 8, 9 or 10, the bearer will receive five tickets of single admission to the Indianapolis Chrysanthemum Show of 1891. This is given in consideration of notices published. Please endorse the title of newspaper and name on back before presenting.

We presume this is intended for papers in the smaller places throughout the state as the Indianapolis show draws consider-

able patronage from outside points. For that purpose it would seem valuable, though it would hardly be judicious to use such a card with the local press.

In sending complimentary to the local papers it is well to send each important member of the staff of each paper a season pass upon which his own name appears. It is generally more gratifying to the recipient to have such a one than one bearing simply the name of the paper. The number of season passes should be determined by the size of the staff of the paper and the editorial assistants should not be overlooked as each one has certain discretion in the use of the blue pencil. These season passes should be supplemented by a liberal bunch of single admission complimentary to each paper. The editor and his assistants each have a circle of friends whom he expects to be able to provide for. They have become so used to this that it seems a right to them and they will feel disgruntled if sufficient tickets are not supplied. The people's eye go to are practically professional deadheads and never pay admissions any way so nothing is really lost to the management and the good will of the press is vital. And don't forget the reporter. See that he or she has tickets for friends and a flower or so when they visit the show. Flowers should be provided for this purpose. The essentials for liberal press notices are first the good will of the editor and his assistants that a reporter may be sent to write up the exhibition and with instructions to "give it two columns if worth it," and second the good will of the reporter that he may exert himself to write an attractive story and be made to see that the subject is "worth" the two columns—and a little more. He may be brought into such an enthusiastic frame of mind as to suggest to his superior the advantage of illustrations for his report of the following day and illustrations add very materially in attracting notice to the show, even when poorly done. A picture catches the eye, and excites curiosity as to the matter accompanying it.

It will be found a good investment too to send the editor and his assistants each a small box of chrysanthemums or other flowers occasionally in advance of the exhibition and daily during its continuance. Such a pleasant remembrance can not fail to be appreciated.

In placing the advertising it will be wisest to use an equal amount of space in each paper. The rates in the papers of lesser importance will be lower than those of wider circulation, but so long as an equal space is used in each the business manager will make no complaint to the editorial staff that the paper is being discriminated against. And no matter how liberal the notices in the reading columns a small card among the amusement ads. will prove a good investment. Many people who have been favorably affected by descriptive articles will later turn to the amusement column of a subsequent issue to ascertain the hours the show is open, price of admission, special features for the day, etc.

Two New Chrysanthemums.

We have received from Mr. Jno. N. May two new chrysanthemums, which received commendation from the Am. Chrysanthemum Society at New York. They are both early varieties. One of them, Daybreak, is a light pink shading to lemon in the center, the pink being very suggestive of the popular carnation after which it was named. It is flat in form, of the Vivand-Morel or Inter-Ocean type, with a stiff

BUFFET TABLE CENTER PIECE ILLUSTRATION NO. 1.

stem well clothed with handsome foliage.

The second variety is a seedling of English origin, introduced by Mr. May; it has already taken three first premiums in the seedling class in England. It has been named Sunrise, and is an incurved bloom, very large and deep, the color being a warm terra cotta on the inside of the petals, with a golden buff reverse. The special value of this sort lies in its earliness; we appear to have no other early red. We are advised that this flower is selling very well in the New York market. It was much admired by chrysanthemum experts who saw it here.

TO PREVENT RUST.—Dissolve one pound of sulphate of copper in two quarts of ammonia in a 2-gallon jar. When dissolved add another quart of ammonia and stir well. [The liquid can be kept in this form for some time and used as needed.] Add a pint of this solution to a barrel of water and syringe the plants with a force-pump every two weeks. And don't let the time for spraying pass without attending to the operation.

Carnation Notes.

When do I prepare my soil for next year? Why that was attended to several weeks ago. It would not do to leave that later, and especially until spring. We first manure a piece of sod ground at the rate of ten tons (fresh stable manure) to the acre and plow under six inches deep. This is left until next spring, when we plant our stock on it. Now previous to planting we manure the headlands at the same rate as at first. The soil from these headlands we use for the houses. This is

cultivated of course whenever the plants are. You may think the manure in our sandy loam will leach out during heavy rains, but this is a very great mistake, and it saves us carting to a pile and turning it over by hand, which can not be done as thoroughly as by the plow or cultivator, and the manure becomes thoroughly incorporated with the soil. In the soil we used this fall you could scarcely see a trace of manure, although we used five tons on a piece of ground fifty feet square. No, I have no plow that would turn this amount under at one time but it was put on at several different times. The roots of carnations or any other plants will take hold much quicker in soil in this condition than they will where the manure is mixed with it just previous to using, and then it saves turning the manure several times, as we put it on direct from the stable yard or car. But you will say how will this work on your heavy clay soil, providing you have this kind. Even better than on our light soil. Now I find that the carnation likes a loose friable loam and the heaviest of soils can be brought into this condition by adopting our method. There is also a most excellent way of lightening heavy soils, and that is to cut wheat or oat straw that can as a rule be bought very cheap, into short lengths and plowed under in the early fall (October is the best time) at the rate of two or more tons to the acre. Straw not only lightens the soil but it is also one of the very best fertilizers. You must bear in mind that it is now an established fact that it does not improve vegetable matter as a fertilizer to pass through an animal, it simply reduces the bulk but at the same time many important elements which would be useful as plant food go to nourish the animal. Yes, commercial fertilizers will do very well some years and on ground that has been cropped for several years, but not such a season as last.

Carnations do best on sod ground simply because it holds the moisture necessary to produce a vigorous healthy plant, but as I told you before you must plow the ground in the fall, as decomposition sets in at once, where if left until spring decaying matter in the soil at that time brings with it the absolutely necessary company of scavengers in the shape of grubs and other insect life, many species of which are great enemies of the carnation, for where you find the insects you are most apt to find the mole who hunts the insects, and he will burrow under a whole row of carnations, loosening the roots to such an extent that they soon die. It is generally supposed that the mole eats the roots, but this is now considered by all naturalists to be a mistake, and that the field mouse is the animal who does that mischief, following as he will in the burrow made by the mole.

CHAS. H. ALLEN.

Carnations at Jersey City.

Grace Wilder still maintains a strong hold on the esteem of the Jersey City carnation growers. It is to be found in quantity in almost every one of the numerous establishments here devoted to this industry, sharing only with Portia and Lizzie McGowan the position of leader among the varieties grown. Chris Pesenecker is very proud of his Wilders and with good reason for they are a grand lot of plants and are blooming heavily already. A pure white sport from Wilder which originated with him he also values highly. The blooms are not of first size but are well formed and it is a tremendous cropper. Wilder is also very successful at John Reid's. Here are twelve thousand plants of it which is more than one-third of Mr. Reid's entire stock of carnations. It is later with him than with Mr. Pesenecker and will not be in full crop until about Thanksgiving time. At Bidwell Bros. place, which adjoins Mr. Reid's, Wilder is not so much esteemed and this is one of the few places where it is unsatisfactory.

Lizzie McGowan seems to be the leading white variety with everyone except John Harrison who likes Hinze's White better and grows this instead. Mr. Harrison's plants are enormous and a heavy crop of flowers has already been cut from them. Pesenecker has fourteen thousand McGowans, splendid strong plants and the picture of vigorous health. Carnation growers in other and less favored sections might well envy this man, for he has left out in the field, after selecting his stock, thousands of plants much finer than the best stock obtainable by many growers. These outside plants are yielding a large crop of cut flowers even now and giving a better profit, Mr. Pesenecker believes, than would be realized from the sale of the plants outright.

Portia, or Lady Emma as some of the growers persist in calling the special strain grown by them, is the favorite scarlet here as elsewhere. No variety is equally successful with everybody, so John Reid is inclined to give the preference to Emily Pierson, a variety which on the contrary his neighbor Mr. Harrison regards as very inferior, pointing with pardonable pride to a house of his favorite Lady Emmas which it would be hard to beat anywhere in the country.

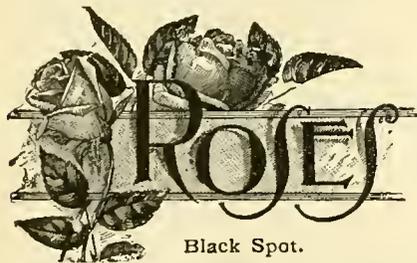

Tidal Wave is generally grown for a deep pink but it has a rival in Van Leeuwen which most of the growers seem to like, it being very similar in color to Tidal Wave but having the advantage of longer stems. All grow Daybreak, John Harrison and Leach Bros. having remark-

ably compact and shapely plants of this usually straggly variety.

On Mr. Pesenecker's place, which is devoted exclusively to carnations there are thirty-five thousand plants. Besides the standard varieties above described, the newer varieties are all to be seen in more or less quantity. Thos. Cartledge is in fine condition. Wm. Scott is grand but is away behind Grace Wilder as to time of crop. Edna Craig is fair, much better than last year Mr. Pesenecker says. Uncle John is very sick looking and Helen Keller also looks badly, it being apparently a variety hard to transplant. Adelaide Kresken bursts badly and gives poor results generally and is also like Keller, difficult to lift.

John Harrison has quite a number of the newer varieties under trial. Wm. Scott is very satisfactory. He has three good sports from this variety, two white and one deep pink which retain the excellent qualities of form and size of flower which characterize Scott. Sweetbriars are nearly all dead and Kresken, of which he bought a thousand, is in the same unfortunate condition, a disease at the roots being the apparent cause. This is to be regretted especially in the case of the latter variety which when it comes perfect is an acquisition although its lack of fragrance is a strong point against it. Mr. Harrison has not yet recovered from his astonishment at the neat manner in which that wily scamp, Josephs, got the best of him on a load of plants.

Rust, spot and similar torments of the carnation grower's existence are noticeably infrequent in Jersey City houses this season and the only serious trouble one hears of is an indictment which John Reid has against the grasshoppers for having fed on his carnation buds all summer.

Black Spot.

In response to an inquiry by a florist of Portland, Oregon, as to best treatment for outdoor grown roses affected by black spot, Professor Craig of the Oregon State Experiment Station writes as follows:

"The only remedy is prevention. Collect and burn the dying leaves as they drop; clip off the terminal buds if the plants after losing their leaves try to put out fresh shoots, as they will winter better.

"Shortly before the leaves unfold in the spring spray with eau celeste; spray again as soon as they are fairly opened, and at intervals of three or four weeks until the flowers begin to open, especially if rains wash the protecting substance from the leaves.

"Take 4 ounces of copper sulphate ('Blue Stone') to one gallon of hot water, and after the solution has cooled add 4 fluid ounces of ammonia and five gallons of water. Mix in a wooden or earthenware dish, as a tin pail would become copper plated. If any spotted leaves appear on the sprayed bushes cut them off promptly and burn.

"The above treatment should prevent all 'black spot' and 'mildew' attacks, and will not cost much, as the solution can be applied with a whisk broom or a bunch of dry grass."

Kaiserin and Meteor.

In a St. Paul, Minn., rose house Kaiserin and Meteor are growing in the same bench with a night temperature of 65° to 68°. The Meteors were fine large well formed compact buds, with no bull heads. The Kaiserin showed a vigorous clean growth of wood, but the buds were scarce and small. At the same establishment we noted Kaiserin grown with the Bridesmaid at a night temperature of 58° to 60°. They were in full crop, fine, large well expanded blooms of most perfect form; superb in every respect. This rose has done well here during the summer, but the above noted circumstance would indicate that it is not heat alone that is essential to its perfect development.

FELIX.

Cattleya Chloris.

This fine cattleya is now in flower presumably for the first time in this country, and being the first hybrid raised having the well known *C. Bowringiana* for a parent makes it extremely interesting. It is another Veitchian hybrid raised two years ago between *C. maxima* and *C. Bowringiana*. The flowers are intermediate in form, but the habit of plant partakes more after the character of *Bowringiana*. The form of pseudo bulbs, the glaucous ovate acuminate leaves two and three at the top, and the enlargement at the base of the bulb are all characteristic of *C. Bowringiana*.

The flowers are medium; sepals and petals are light purple about 4½ inches across, petals 1½ inches broad, sepals ¾ of an inch broad, lip two inches across at the front, deep purple shaded lighter to the open throat, which is richly reticulated as in *C. maxima*; unfolded lobe and margin of lip light purple.

This novelty is of good constitution and will prove as easy of culture as *C. Bowringiana*. The plant is of dwarf habit, the flowers larger, of richer color, and coming into flower in late September and October, and lasting three weeks in perfection. We grow this plant in a basket in the intermediate portion of our cattleya house in good fern root and live sphagnum. It roots similarly to *Bowringiana* and likes plenty of water when developing its growths. W. ROBINSON. No. Easton, Mass.

Foreign Notes.

The production of orchid hybrids still seems to progress in England. Among those recently receiving awards from the Royal Horticultural Society was *Cattleya Ashtoniana*, the result of a cross between *C. Loddigesii Harrisonia* and *C. Warszewiczii*. The sepals and petals are soft rose. The exterior of the lip is pale purple with darker lines toward the top, the lamina crimson purple, wavy, crisped and toothed. The interior of the lip is pale purple. New cypripediums continue to appear frequently, in many cases receiving varietal names like ordinary florists' flowers, as *W. R. Lee* or *Excelsior*. Many of them seem to possess much merit, but it is doubtful whether they will make any impression on the trade.

A new variety of our old friend *Chysis bractescens* is reported, *C. bractescens*

aurea. The sepals and petals are pure white, while the three lobed lip is deep gold in the throat, this color extending beyond the fleshy crest to the base. This variety has so far appeared in one newly imported plant only.

Cattleya hybrida Kienastiana is a beautiful hybrid, a cross between *C. aurea* and *C. speciosissima*. The flowers resemble *aurea* in form, the sepals bluish, and the petals of a deeper color. The front of the lip is bright carmine rose of a very shining shade, the throat deep orange at the entrance, veined within with white on a crimson ground. The arched side lobes are yellowish within, with a rosy fringed margin.

A remarkable new cypripedium is *James H. Veitch*, a cross between *C. Stonei platytanum* and *C. Curtisi*. The dorsal sepal is rather small, light green lined with chocolate, the petals broad, about 4 inches in length, green boldly blotched with deep crimson, dark hairs appearing at the edge; the lip deep brownish crimson. The leaves are light green with darker blotches, and the growth is very robust. This is considered one of the finest novelties of the year.

Arrangement of Flowers.

XII.

CENTERPIECES FOR BUFFET TABLES.

By buffet table we mean such a table as is set for the purpose of serving from at large gatherings in the home, such as weddings and receptions. A table of this sort may be round, square or oblong. Generally the dimensions are of a size that would seat a dozen persons, but as the size of the table has nothing to do with the number of guests served, the accommodations of the dining room is more apt to be taken into consideration as to space. The buffet table is set for show, its usefulness being rather limited; it is loaded with masses of silver and plate glass and perhaps some elaborate confections. But let us turn to the floral arrangement suitable for such a table, the center space being generally reserved for this purpose, though let it be understood that this is not always the case. An oblong table is often set to elaborate the caterers art (and the caterer rarely consults the florist in this matter) with a pyramid of confection or fruit. In such a case flower arrangements are placed at either end of the table; these must be of a size in symmetry with the center arrangement, and care should be taken not to over weight the table with material, since the floral arrangement here is intended to be but of secondary consideration. But for the center piece proper, this should be made up as showy as may be possible with the material selected. In size there is nothing to hamper us, always excepting the whims of the caterer and the price to which you are limited. On some swell occasions the cost is not considered and your order is *carte blanche*. If such is the case you may build a design of expensive material to cost a hundred dollars and upwards, but such orders, especially in these present times, are few and far between. In the majority of affairs of this kind from \$25 to \$35 is the limit.

Let us now consider a few arrangements which would range in price from five to twenty-five dollars each.

Our first illustration shows an arrangement of carnation in a round bowl; this piece at the present market rate of flowers can be furnished for the moderate sum of \$5. It consists of 100 pink carnations (*Nancy Hanks*) which are selling at present for \$1.50 per hundred, but as the

BUFFET TABLE CENTER PIECE. ILLUSTRATION NO. 2.

stock is of a selected class, and allowing some for waste we shall figure them at \$2. A few branches of carnation green, moss picks and wire 50 cents; the bowl or whatever receptacle you use to be returned. At this rate you double your money at the given price, \$5. This may be considered the florist's legitimate profit and is generally accepted as a basis for figuring. On large orders where you figure against competition a smaller percentage of profit is often accepted, and again where you cater to a high class trade, especially of that educated element which appreciates the florists' art and is willing to pay for it, you may be able without injury to your business, to figure on a larger profit.

A profit of 100% may seem exorbitant to the layman, but let him go into the business once, and it will take him but a very short time to find out, that a less rate of average profit will not pay. The loss by wastage of unsold stock is a serious factor in scaling down your actual profit, a fact we must constantly bear in mind.

Now for the arrangement of the piece under consideration, which is very simple. A cut glass bowl of suitable size will serve our purpose, still other forms are admissible. In this instance we used a bronze jardiniere with an opening of about 6 inches in diameter. If the stock is extra long the flowers can be placed loose set in water but a more showy design will be effected if your receptacle is filled with moss and the flowers arranged on this, first wiring them on matchstick of sufficient length. The flowers with a length of stem from 9 to 12 inches are best, wired with a No. 26 wire 3 to 4 stems to the stick. Select those with a stiff and upright stem for the center, and allow the weak stemmed ones to droop over the edge. If you can secure flowers with numerous buds on the stem so much the better. A few branches of their foliage

are indispensable in a good arrangement of this flower, since any other green rather detracts than adds to its make-up. A few fronds of some kind of ferns or asparagus might be arranged on the cloth surrounding your bowl.

Of course we are not confined to the use of carnations, for this piece. Good rose stock can be had for \$4 per 100, and 50 blooms will make a presentable arrangement at the specified price. During the coming chrysanthemum season for instance there will be plenty of stock of fair quality for this purpose which can be bought at a figure to come within our limit.

The arrangement of the second piece consists of a glass vase 12 inches high filled with 50 long-stemmed Perle roses; this is placed on a heavy plate mirror 30 inches in diameter, around the edge of which is placed a loosely arranged garland of white cosmos. On the mirror and surrounding the vase are placed three clumps of adiantum, the fronds placed in such position as to look like a growing plant. In fact the growing plants, if these can be had are preferable as the fronds will not wilt so easily. The plants should be tipped out of the pots, the loose dirt shaken off, and the balls of roots tied up in green moss. But if the cut fronds are used these are placed in a clump of green moss. Take a ball of moss, say the size of your fist when firmly pressed together, and pass a No. 26 wire around it several times to hold it in position, press it flat at one end to stand on, and you are ready to stick in your fern fronds. This if carefully done can be accomplished without the aid of picks or wire and you are then sure the stems will be embedded in the moss and thus keep fresh longer. In the arrangement of the roses in the vase follow the same rules laid down before, selecting the longest stemmed buds for the center, and allow the weaker stems to droop well over the rim of the vase. None but

natural rose foliage should be used. This arrangement can be put up for \$10 at the present price of flowers. Cost, 50 selected Perles, \$2, 100 long stemmed adiantum \$1.25, cosmos 75 cents, use of mirror and vase, running the risk of breakage \$1, total \$5. This arrangement of course, the same as the former, can be varied by using different material for the vase as well as the flowers surrounding the mirror. Let us say we use Meteor roses instead of Perles; these are worth \$5 per 100, but 40 blooms of this variety will go as far as 50 of the other, therefore the cost would be the same. Cosmos is in season but a short time, it is a beautiful thing for the purpose, but in winter we must look for something else. Valley or Romans are good but this will add to the cost. Say 50 valley at \$4 or 50 Romans at \$4 (but you can often buy them for less) this would bring the cost to \$6.25. Carnations, which need not be very long stemmed would be within our range, say 50 blooms at \$1.50 per 100. Again, you could omit the flowers around the rim altogether and add another 50 fern fronds. Then you can do without the mirror, if you choose and in considering your cost you have an additional dollar to add to the material. Seventy-five high grade extra long carnations for the vase would fill the bill or say a dozen good "mums," or more in number of smaller blooms. All these and many others would come within the range of our price.

The third arrangement consists of 125 selected long stemmed La France roses and adiantum about 30 inches high. The preparing of the material has been covered fully in previous articles on basket arrangements. On account of the drooping nature of average La France blooms many of the stems, particularly those used for the center, will have to be strengthened by a supporting wire of No. 24 size, but don't let us use wire unless necessary. The receptacle is a round Japanese bamboo basket which is filled with moss in the usual manner, with the sphagnum covered with wood ferns. For long stemmed roses of this kind the match stick is preferable to the pick and several stems may be wired to one stick. In the arrangement don't have the flowers all of one length, but be careful and not elevate the fully open flowers, which is often seen, over the smaller buds; the undeveloped bud should always stand highest. Always see that the edge of your basket or design is well finished by drooping your flowers and green well over the rim. A few ferns arranged on the cloth around the base of the design is needed for a finish. The price of this centre piece at current market rate of material is \$15. The price of good La France roses doesn't exceed \$4 per 100, but allowing for waste in broken stems, etc. we place them at \$4.50 per hundred. We would place the cost then as follows: 125 La France at \$4.50, \$5.63, 75 long adiantum at \$1.25 85 cents, common ferns 15 cents, moss, wire and use of basket 75 cents, total \$7.37. If made up with different varieties of roses we would have about the same result with such varieties as Brides, Mermets, Meteor and the like. Goutier and Perles would probably take more flowers, but the cost price of these is less; the same result may be obtained by numerous other varieties of flowers, such as chrysanthemums and later on tulips, daffs and Dutch hyacinths, Harissii, etc.

The last plate shows 50 blooms of Beauties arranged in a round bowl filled with water; the bowl is placed on a mirror of the dimensions given in No. 2, around the edge of which is placed a

wreath of white cosmos and adiantum. The make up can be taken in at a glance, and needs but little explanation. There is only one difficulty that a new beginner may encounter, and that is as the bowl is but about 10 inches high it would somewhat bother him to hold the flowers with 3 feet of stem in their proper position. This can easily be done by placing a vase just large enough to hold about half the number in the centre of your bowl; this vase may be several inches higher than the bowl, straight up and down slightly flaring at the top, but it must be heavy, such as imitation cut glass. The longest stemmed flowers are placed in the vase, which if of the right size will hold them in position as arranged. The second half of the flowers may be of less lengthy stem, which are placed in the bowl proper. The space between the inside vase and bowl is now narrow enough to keep these flowers also in position. The selling price of this piece would be \$25; cost 2 dozen Beauties at \$2.50, 2 dozen at \$2, cosmos \$1, 75 adiantum 85 cents, use of mirror and vases \$1.50, total \$12.35.

Of course as the season advances, the price of Beauties goes up and you will naturally have to cut down the number of flowers in proportion. Few other flowers are suitable as substitutes for an effective piece of this kind. Chrysanthemums are just the thing though, and so are *Harrisii* lilies.

New York.

Sander's auction sale with Messrs. Rolker & Sons on October 19 was a great success, buyers coming from such long distances as Chicago, Glens Falls, Troy, Detroit, Philadelphia and Boston, and these together with a crowd from New York City, Brooklyn and New Jersey made things lively, the bidding and prices reminding one of the good old times. Mr. Fred A. Rolker, son of Mr. August Rolker, occupied the stand and was warmly complimented on his success in this his first orchid sale. The indispensable Pat was largely in evidence, remarking as he noted the lively bidding that "a dispute is the life of trade."

The wholesale cut flower market is in the dumps again. Reason, too much stock coming in. Roses of all kinds too abundant and being crowded to one side by the avalanche of chrysanthemums which is just beginning to become a burden. A large part of Saturday's receipts was carried over until Monday, a condition which affected disastrously the returns to the growers for the preceding week and had an equally unfortunate effect on Monday's opening trade. Carnations do not seem to feel the pressure to the same extent that the roses do but they have weakened to some extent. Violets are improving slowly and when really good sell as well as usual at this season. Lily of the valley finds a very slow market. Cosmos is seen everywhere but in much less quantities than has been the case in previous years. Although the cold weather has stayed away so well that fuchsias, salvias and begonias still bloom freely in the garden yet with the exception of the cosmos and a few belated dahlias, outdoor bloom has entirely ceased to come in.

The chrysanthemums now being received are of the larger and better mid-season varieties, the very early sorts being about all cut, or if not cut unsalable except in job lots. Kate Brown proved to be one of the very earliest whites here and if cut and sold at once was profita-

ble. If allowed to stand on the plant a few days it shows the center and becomes soft. Mme. Bergmann gave more satisfaction generally than it did last year, the green center formerly complained of having almost wholly disappeared this year. The great complaint against Mrs. E. G. Hill is as regards its stem, which is none too stiff and is bare of foliage for some distance from the flower. Miss Bessie Cummings also suffers from a long weak neck but like the Hill is hard to beat for earliness. The finest and most generally satisfactory white now coming in is Jos. H. White, a variety that is full of good points. Clinton Chalfant which is a yellow sport from White is equally good. Harry Sunderbruch is grand and is to be seen in the larger florists' windows labeled Golden Wedding, a tribute to sentiment which ought to set our chrysanthemum namers a-thinking. Some growers complain that Yellow Queen is rusty; others that Niveus, Domination and Mrs. E. G. Hill show signs of disease with them. The many varying experiences show that varieties do not do equally well with all growers and suggest that either condemnation or praise of a given variety be always taken with a certain amount of reservation. Some of the best sorts such as Ivory, Major Bonaffon, etc., are being cut in a half developed state by some growers and on seeing such one is constrained to question whether the ability to cut a bloom properly is not an accomplishment second only to the ability to grow it.

Whether the American Rose Society attain the position sought by its ambitious promoters or no, there is no question that our rose growers are making very material progress. That persistent investigation and patient perseverance in the face of adverse conditions is the winning course always is well shown in the splendid stock being sent to the market this season by Mr. John N. May. It is a treat to see one of his boxes opened. Some of the Meteor growers are making wonderful progress with this variety. Those who knew only the Meteor of two years ago with its short, gnarly pucker petals, in all shades of color from light red to black and blue would never recognize it in the handsome even colored long and smooth petalled buds which some growers are producing. This is not chance but experience and the gulf between the carelessly grown and carelessly handled stock and the stock above described is rapidly widening. Rubbish becomes more difficult to dispose of every day. Another rose that has been wonderfully improved out of its original defects is the Testout. The loose ragged characteristics of this variety have disappeared and we have a substantial, well formed long and sleek bud far superior to any claims ever made for it by its most sanguine friends. Kaiserin and LaFrance are also in unusually good form this season. Hoste seems to be grown in less quantities than last season. Perle, on the other hand, has been planted more extensively than for some years back. Alluding to the current complaint regarding black spot on American Beauty, Ernst Asmus says, "you cannot cut Beauty all summer and then expect the plants to be in good condition for winter." More truth than poetry there.

On or about November 1 Thos. Young, Jr. will move from his present quarters at 20 West 24th street to a larger, more convenient and central position at 43 West 28th street, and the busy scenes which have for the past seven years given 24th street such prominence as a floral center will disappear from that familiar neigh-

borhood. No man is more thoroughly identified with the great wholesale flower trade of New York than Mr. Young and it goes without saying that a host of friends will wish him still greater success in his new quarters.

Reports from Madison's new social florists' club indicate a prosperous future and its founders are highly elated. Mr. Thos. Kelley will talk on rose growing at the next meeting.

Siebrecht & Wadley will hold an exhibition of chrysanthemums, orchids and decorative plants at the Eden Musee commencing November 8 and lasting for two weeks.

A flower show in connection with the Food and Industrial Exposition at the Grand Central Palace is projected for the month of November. Mr. H. W. Wiperman has charge of this department.

The establishment of G. L. Progatsky at 79 Avenue A has been sold out to F. W. Thielmann of Brooklyn.

I. Forsterman is one of the first growers to get through with the chrysanthemums. His blooms are all cut already and the room occupied by the "mums" is being filled with carnations.

Julius Roehrs has been bringing in a fine crop of *Vanda cœrulea*. This is one of the orchids which sell at sight.

Rev. S. Reynolds Hole, the noted English rosarian is on the water en route to New York. He is sure of a hearty welcome from the American fraternity.

Chas. Schwake reports a phenomenal call for the "Black Callas." Result of advertising in the AMERICAN FLORIST.

McConnell & Grimsbaw, 620 Madison Avenue have been closed up by the sheriff. Several commission houses are heavy losers.

It is said that Klunder is about to return from Chicago to New York.

In town again, Mr. D. D. L. Farson, secretary of the Penna. Horticultural Society.

Chicago.

The chrysanthemum show is a leading topic of conversation now. The press committee is at work and frequent notices of arrangements as perfected are appearing in the dailies. A new feature in advertising this year will be the use of large posters, 12x14 feet. One hundred of these will be posted in various conspicuous places about the city and the exhibition will be announced on these in letters as large as can be had. The display will be so bold that the words "Chrysanthemum Show" can be heard above the rumble of street traffic. The expense of this 100 posters will be \$140 for one week, but the committee believe the expenditure will prove to be well placed. In addition two large banners will be suspended across State and Madison streets where shoppers are thickest. These will cost \$100 and required a special permit from the city council. They ought to be a good investment. Another feature will be handsome vases of chrysanthemum flowers displayed in the windows of leading down town stores with a placard announcing the show. The regular stock chrysanthemum poster is being used freely in the florists' stores and anywhere where influence can get them displayed. A small slip about 2½x4 inches announcing the show is being enclosed in boxes of flowers, bills, statements, etc., by the florists, seedsmen, and others. By the way—the half sheet chrysanthemum poster displayed in elevators is a very effective adv. It requires influence to get the privilege but is worth a little exer-

BUFFET TABLE CENTER PIECE. ILLUSTRATION NO 3.

tion. A good scheme to work with the newspapers is to get them to offer a liberal special prize and take the amount in advertising space.

A word to editors of dailies by influential members of the Horticultural Society who happen to be on intimate terms with them works wonders in the way of securing newspaper publicity. Let the point be made that the show is *not* a money making scheme.

Henry Bornhoft will open a store corner of State and Ontario streets November 15.

A "chrysanthemum ball" is a society event announced for November 16.

The Queen of autumn has taken possession in dead earnest. She is very much in evidence everywhere, but is her rule as dominant as ever? This question is asked seriously by many a grower, a question as yet too early in the season to answer. Certainly the demand for "mums" this season so far has been much lighter than was expected, high-priced flowers particularly go very slow. But as the price has dropped considerable in the last few days, the sales have materially increased.

Said one of our prominent dealers the other day: "I put the price of the first good blooms at \$6 a dozen, basing my figures on the cost of flowers at that time. I found, however, that at that figure the flowers were left on my hands. I next dropped them to \$5, but still there were but few sales. Then I put them at \$4, when they began to move fairly well. At present I hold them at \$3, at which price the demand is quite brisk. Of course a few of the gilt edged blooms bring a better price." Well there you have the experience, not of one man, but of the majority of dealers.

In really first-class stock the market is not overloaded yet. Such Ivory and Golden Queen as the Stollery Bros. of Argyle Park, are cutting fine quick sales at from \$2.50 to \$3. These Ivory, by the way, are the grandest blooms we have ever seen of this variety. In size and finish of blooms, good length of stem and foliage, there is nothing better to be desired. Nathan Smith & Son, of Adrian, Mich., are also sending in to Corbrey & McKellar some superb Mrs. E. G. Hill, by far the best flowers yet seen of this sort on our market; the blooms were more or less spoiled though in transit; it seems this otherwise beautiful sort is not a very good shipper.

While this variety sold quite well on its first appearance in the market the demand has decidedly fallen off. The dealers say the blooms quickly take on a bluish tint that spoils them.

In medium quality of such varieties as Whildin, Ivory, Domination, Kyoto, Gloriosum, etc., the market is loaded, these sell at all the way from 8 to 15; poorer grades of southern stock and varieties grown to sprays go at 2 to 5.

Beauties hold their own, but other roses have taken a fearful tumble; in lots of 500 and upwards good stock may be had for \$1 per 100. But this drop will of course be only temporary, and may last only a day or two.

Violets, so scarce last week, have all of a sudden become very plentiful. The quality is also much improved, but the bottom has been knocked out of prices, which are from 50 to 75 cents for good doubles.

Carnations too, have suffered; fairly good stock may be had at 75, and few going over \$1 per 100.

At the meeting of the Florist Club last Thursday evening there was a good attendance. Officers for the ensuing year were elected as follows: J. F. Kidwell, president; Edgar Sanders, vice-president; N. P. Mueller, recording secretary; J. B. Deamud, financial secretary; W. W. Barnard, treasurer; trustees—J. S. Wilson, W. H. Kidwell, Fred Kanst, Chas. Held, Arnold Ringier.

The sum of \$75 was appropriated to be offered as a special prize at the coming exhibition of the Horticultural Society.

The trustees were instructed to look at rooms in the Masonic Temple and engage them for future meetings if deemed advisable. This move will be made to remove all chance of criticism on the club's holding its meetings in a commission house. At the next meeting the new officers will be installed and some entertainment provided.

After adjournment a regular bowling team was organized with J. S. Wilson captain and P. J. Hauswirth secretary. It is proposed to have regular weekly practice nights and go at the bowling matter in earnest.

A gun club was also organized with President Kidwell as captain. It was unanimously resolved that at Pittsburg the club should at least keep a way from the tail end of the procession.

Philadelphia.

The chrysanthemum tide is rising just a little too fast. The trouble seems to be that it is all flow and no ebb, for they are not selling very well. We believe they are doing as well as usual for both grower and dealer, but there seems to be more about than last season at this time. Nearly all the growers have some of the early varieties and as the demand for this flower does not keep pace with the first installments, the ice boxes soon get filled up and then the cutting of prices commences. Some very good flowers of Mrs. E. G. Hill have been seen and they sell fairly well at from \$1.50 to \$2.00 per dozen, the latter price for extra fine flowers. These prices hold good for nearly all varieties except for some smaller sizes which bring from 50 cents to \$1 00 per dozen.

Some are beginning to say "They're done, I knew they wouldn't last;" "They won't sell after this year," etc., but we venture to predict that these same individuals will be on deck with probably an extra house or two next season.

La Neige is a variety which is not grown to any extent this season. Sprays of this fine white should sell and there are several other small flowers, varieties that should be grown and which would make beautiful sprays.

All kinds of roses are to be had in quantity, except possibly Beauties, which might be more plentiful, prices are about the same as last week but with a falling tendency. The quality is first-rate but the quantity keeps the price down. The larger teas are selling for from 3 to 4 while the smaller stock go slowly at 2. Carnations are coming along finely and improving considerably as the season advances. Fair to good stock brings 1 while \$1.25 to \$1.50 is asked for the best. Among the prominent varieties now in are Daybreak, Portia, McGowan, Sweetbrier, Buttercup, Golden Gate, Wilder, Thos. Cartledge and Mrs. Fisher. Double violets are getting better and sell for 50 cents; valley sells for \$4; there are no Romans as yet. Smilax is again plentiful at from 12 to 15 and asparagus at 50.

With the exception of weddings or other

special occasions the business is very quiet. The weather has been very fine for the past week, and as a consequence the consignments of flowers have been large. The hustlers have a great time getting rid of their stock; as many as six wagons were counted in front of one dealer's place with a hustler from each inside the store trying his best to lighten his load. Such competition is hard on prices, and a man with orders for a lot of flowers can get his stock at very low rates.

H. H. Battles has just put a stunning rig on the street. Things are looking prosperous on 12th street.

The coming chrysanthemum show promises well. Secretary Farson says that entries are coming in fast. He thinks this exhibition will be the best the society has ever held, both in number of entries and quality of flowers. The vegetable corner is to be well filled up. The firm of H. A. Dreer have offered special premiums amounting to \$100 for exhibits of these fruits and roots of the garden.

The bids for decorating the Academy of Music, where the show is to be held, will be opened and the contracts awarded by Saturday. The building should certainly look very handsome when everything is in readiness for the doors to open.

Ernest Kaufman and Simon G. Skidelsky trading as Ernest Kaufman & Co., dealers in florists' supplies, North Fourth street, made an assignment to-day for the benefit of creditors to Bernhard Selig. The deed is dated the 24th inst. and conveys no real estate.

The November meeting of the Florists' Club will be held Tuesday, October 30, as the regular date, November 6, is the first night of the chrysanthemum show. John Carver Jr. will read a paper on how to lay out and plant a one acre plot for a suburban residence. K.

St. Louis.

After a week's cool weather it has suddenly turned warm again, and has overstocked the market with the increased output, there being quantities of stock wasting. The old saying about an ill wind fits the case, for it is rushing the chrysanthemums along at such a rate that quantities of plants will be in fine shape for the show, over which heads were being shaken and regrets expressed last week. As is always the case, no one can be found who has grown any plants for the show; still in a visit among the growers last week, there was not a place visited where there were not some extra large pot plants that might under half a dozen circumstances be shown so that a fair showing of pot plants may be expected. In cut flowers the competition promises to be keener; several sure competitors have houses that promise to cut stock fully up to a show standard.

The rose men are not saying much but are watching the appearance and growth of heavy red canes from the base of plants of Kaiserin, Testout and La France and speculating on the length of time required to be in condition for cutting, or are selecting tens and twenties from bunches of a hundred or so, to see how they look. In short all are preparing, and the prospects for a successful show were never brighter. The committee having the show in charge are working steadily, and nothing will be omitted that can in any way aid towards success.

The Michel Plant and Bulb Co. have doubled the space they had in chrysanthemums last season; their collection last year was general, the increase this season being in varieties that pleased them best

last year. The principal whites grown in quantity are Queen and Niveus; yellows are H. Sunderbruch, Illuminator and Golden Wedding. The growth on their Golden Weddings is something marvelous; Eugene Dailedouze along side of it cannot come anywhere near it in foliage or stem. If Golden Wedding flowers come according to the promise made by its growth, some record breakers will come from this place. The pinks mostly grown are W. R. Smith, C. Chalfant and W. N. Rudd. Quite a batch of Mrs. E. G. Hill were also noted looking very well; they promise to come in close behind Kate Brown, which variety is the earliest wherever grown.

At Mr. Schray's the "mums" are also in good shape, the great bulk being market plants in 6 and 7-inch pots. Quite a few in larger sizes were passed without remark, needless to say they will appear about show time. The earliest varieties were Whilidin, Gloriosum and Kate Brown with Mrs. E. G. Hill a close second. Their regular house of chrysanthemums for cut flowers is in fine shape; quite a number of varieties are grown, all good ones. The newer varieties are receiving a trial also some of them making an attempt to raise the roof; after being grown a season and the habit observed they are given all the headroom required. The house of carnations that have been grown in the benches all summer are looking fine, the plants being strong and healthy, and cutting magnificent flowers; a vase of flowers from these plants shown at the last club meeting elicited most favorable comments, Buttercup, Sweetbrier and Wm. Scott being exceptionally large flowers. In the last house visited quite a novelty was noticed, it being a plant of Euphorbia monstrosa, standing about three feet high, it was brought from the Centennial in 1876, being then quite a small plant. Several attempts have been made to increase it but so far without success.

Two special prizes of \$10 each have been added to the premium list for best vase of pink and white roses, Beauty and Belle excepted, not less than 35 nor more than 50 flowers.

Mr. Chas. Cannon who has been suffering from an attack of sickness for some time is again around; he intends opening another store on Grand and Franklin avenues.

Mr. Robert Thompson of the firm of Thompson, Anderson & Kennedy and formerly with the Lord & Burnhan Co., was married on the 18th of September.

R. F. T.

Cleveland.

Cosmos is just beginning to become plentiful. It seems unusually late this season; cannot someone tell us the secret of getting this useful flower in bloom earlier? Dahlias were a failure this year with perhaps one or two exceptions; they did not bloom freely and were not at all a satisfactory crop when frost cut their career short. This partial failure was due no doubt to the hot dry summer as it was more noticeable in the light sandy soils than in districts where there is more clay.

The Gordan Greenhouses sent in the earliest chrysanthemums of the season. Good flowers of Gloriosum and Kate Brown brought from \$12 to \$15 per 100 wholesale. Roses and carnations for the past three weeks have been in active demand; at times there has almost been a famine so to speak, and we know of several cases when florists' stock got so low they were compelled to beg a few

flowers from their neighbors to help fill out an order. Happily there is a relief now in the chrysanthemum. Violets are becoming more plentiful, although the supply of the double sorts is still limited and not very large with too much white in the eye.

The Cleveland Floral Co. has opened up a new store down town. They are located on Erie street where they have a neat store nicely fitted up. They have abundant glass to back them up.

O. Holm, real estate dealer, has embarked in the florist business and has started a store at 211 Euclid avenue. He has no greenhouses and will buy what his trade demands.

The hose mender fraud who swindled several parties in our city has been caught, and is under heavy bail to appear before the grand jury.

At a fashionable wedding this week the main center piece for a table was a wreath of Meteor roses fifty-four inches in diameter; there were between four and five hundred roses in it; on one side was a sash of ribbon.

Beaumont had the decorating at the opening of a large jewelry house this week. Beauties and chrysanthemums were lavishly used, and there were also set pieces emblematic of the trade.

John Hudson of Brooklyn Village has put up two houses 15x45 feet, and will grow a general mixed stock. L. F. D.

Boston.

The third week in October opens with conditions in the cut flower trade somewhat unsettled, and indications that the regular annual congestion of chrysanthemums, roses and carnations is about to be experienced. Stock is in excess of the demand and prices have already begun to feel it. The only course is to practice patience for the next four weeks, for there is no remedy. The demand for white chrysanthemums has been fair and yellow is not yet badly overstocked.

Intending exhibitors at the Mass. Horticultural Society's chrysanthemum show if at a distance from Boston can address their exhibits to Mr. Jos. H. Woodford, superintendent of exhibition, Horticultural Hall, Boston, and they will receive proper care. Show opens on Tuesday, November 6.

Peter Fisher has some very promising seedling carnations. He says that his experience in buying diseased varieties has forced him to depend entirely on his own seedlings for stock.

Wm. Scott is the most popular carnation outside of Daybreak coming in to the cut flower market. John Walsh has Scott in splendid shape.

Visiting Boston: Martin Renkauf, representing Bayersdorfer & Co., Phila.; A. T. Boddington, from United States Nurseries, Short Hills, N. J., and W. E. Morton, Portland, Me.

Cincinnati.

We are having unusually warm weather for the time of year and the effect is severely felt on the cut flower trade. Only the choice stock brings the top notch price, and good stock is to be found in the job lots. American Beauty, strictly first-class, sells at 20, while shorter stems range from 10 to 15; other roses from 2 to 4. Carnations are a little firmer, white especially being scarce; fair sell at 1 to 1.25, while fancy bring 2 to 3. Valley is still firm at 4. Chrysanthemums are in fair demand and the market well cleared up at 10 to 15, blooms that formerly sold

BUFFET TABLE CENTER PIECE. ILLUSTRATION NO 4.

at 25. The kinds now received are Mrs. E. G. Hill, Yellow Queen, Whildin, Gloriosum, Kate Brown, Rosa Kupferle and two white seedlings. A walk through the flower market shows every stand well decorated with pot plants of these. Kate Brown and Gloriosum seem to predominate, with a few well grown October Beauty. The growers report fair sales.

At the exhibition of early chrysanthemum seedlings R. Witterstaetter displayed a vase containing 25 blooms of H. L. Sunderbruch carnation, red in color with stems stiff enough to give it a graceful appearance. Another vase contained several seedlings, one a pure white, slightly touched with crimson; another resembling Daybreak but more delicate in shade; still another pure white with stiff stem, perfect calyx, well built flower and fragrant. Some of these will certainly claim attention later.

Adelaide Kresken is showing well with all our growers and specimen blooms command 3c.

Mr. Albert McCullough was in Chicago last week.

Our visitors were Mr. T. C. Hobbs, Anchorage, Ky.; Mr. Alfred Baur, of E. G. Hill & Co., and Joseph Goldman of Middletown, O. G.

St. Paul, Minn.

The fine bright weather of the past week has brought blooms in abundance, and for once the supply has equalled the demand. Stock is of the very finest quality. Never before have such fine roses been seen in St. Paul as were cut during the week.

"Mums" are a little late and but very

few have as yet been cut. Among the earliest here are Monarch, Gloriosum, Ivory, J. Hood Wright and Mrs. E. G. Hill. This latter is the finest pink ever grown here, its color, size and form being perfect. One peculiarity noted in this variety by one of our prominent growers is that the laterals make much better blooms than the crown buds. So few "mums" have been offered that the price for them can not be said to be established. The first offered were Monarchs 7 to 9 inches in diameter and they retailed readily at 25 cents apiece.

L. L. May & Co. have their new store on Fifth street pretty well settled and ready for business. A large show window filled with palms, ferns and pretty foliage plants interspersed with high vases filled with cut roses, has been a very attractive center of admiration. The store itself is large, light and attractive and when fully furnished will be one of the finest retail stores in the country.

The Society of Minnesota Florists met at the West Hotel, Minneapolis, Saturday evening, October 13, 1894. President Souden occupied the chair and all the officers were present. The attendance was one of the largest in the history of the society, the proceedings harmonious and the members enthusiastic. After the reading of the minutes, which were duly approved, the committee empowered to purchase a cane for ex-President Nagel reported, and the cane, a handsome gold headed one with this inscription, "Presented by S. O. M. F.," was duly presented to him. Mr. Nagel thanked the society for the gift in his usual felicitous style. The cane was presented to Mr. Nagel in consideration of his services in

behalf of the society. He is one of the oldest members in point of years and of service, has done much to advance its interests, has served three terms as president and is justly entitled to the gift at the hands of the society.

The president then read the following address: "Gentlemen and members of the Society of Minnesota Florists. For the benefit of any strangers who have come to spend the evening with us I consider it the duty of your president to give them a little idea of the society, its aim and purpose. The object of the society is to bring together all who are interested in floriculture or horticulture, whether amateur or professional, so that we may increase our knowledge in all the different branches of our profession. A higher, nobler mission hath no one. Our occupation is worthy of all the interest we can give it.

"I am sorry our society has been on the decrease for the past two years, for reasons not known. However, it is very gratifying to think that such members as Mr. Nagel, Mr. Malmquist, Mr. Swanson and a few others never gave up hope. Gentlemen, I can assure you that I never came to a meeting, however small the attendance, but that I learned something worth coming for, and it is my belief that if we work together, shoulder to shoulder, for the good of this society and its aims that we will soon regain that sphere of usefulness which is to benefit us and the florists in general.

"To the young men who are anxious to become successful florists or gardeners I would say, it is not so much the opportunities as the use you make of them that tells on life's journey. Never become discouraged when you make a failure and cannot account for it, for the very best florists of the day sometimes make failures. Always endeavor to find out the why and wherefore, and then try again.

"Let us not forget the ladies, but do all in our power to encourage them, especially in the retail stores, for I consider them better adapted for that than gentlemen clerks.

"Above all let us avoid all small, mean jealousies and live on friendly terms with one another.

"I believe that we as a society should do all that lies in our power to encourage plant and cut flower exhibitions, for there is no better mode of advertising and encouraging each and every one of us.

"Let us get right down to business and work hard, for there is plenty of material in the state of Minnesota."

The subject for the evening's discussion was "The advisability of using oil for fuel." The secretary, Mr. Currie, read several communications from prominent growers in the east all favoring the use of oil; also a letter from one of the leading oil contractors explaining in detail their system of putting it in and using it. Mr. F. C. Bartels gave his experience with oil and pronounced it very satisfactory, finding it cleaner and cheaper than coal. Others present gave their views, and all seemed to concur in the opinion that oil is cleaner, cheaper and in every way preferable to coal for fuel purposes.

Mr. R. J. Mendenhall of Minneapolis, with upwards of 75,000 feet of glass, is now putting in oil, using the hydraulic pressure system. When completed our florists will have an opportunity of witnessing its practical working.

The society adjourned to meet one month hence in St. Paul. Mr. Souden showed some very fine specimen blooms of Bridesmaid and Testout. FELIX.

THE AMERICAN FLORIST

Subscription \$1.00 a Year. To Europe, \$2.00.

Advertisements, 10 Cents a Line, Agate; Inch, \$1.40; Column, \$14.00. Cash with Order.

Discounts, 6 times, 5 per cent; 13 times, 10 per cent; 26 times, 20 per cent; 52 times, 30 per cent. No reduction made for large space.

The Advertising Department of the AMERICAN FLORIST is for Florists, Seedsmen, and dealers in wares pertaining to those lines ONLY. Please to remember it.

Orders for less than one-half inch space not accepted.

Advertisements must reach us by Wednesday to secure insertion in the issue for the following Saturday.

Address THE AMERICAN FLORIST CO., Chicago.

MR. A. W. SMITH of Americus, Ga., who sent us variegated sprays of Euphorbia heterophylla (not pulcherrima as stated in a previous issue), tells us that this development is the result of five years' work, and is now a fixed type. The combination of scarlet bracts and variegated leaves is very showy, and being, as the originator says, fixed under exposure, should make a valuable addition to subtropical bedding.

BLOOMS OF A YELLOW CANNA seedling were recently received from Mr. H. P. Potter, Wilmington, Del. The blooms had suffered somewhat in transit, so it was impossible to form much idea of the spike, but the flowers were very attractive being a rich deep yellow bordering on orange, entirely free from any spot or stain of red. If its other qualifications are equal to its color it should be a very useful variety.

WORDEN-SECKEL PEAR.—The Smiths & Powell Co., Syracuse, N. Y., send us several fruits of this pear, a seedling of the Seckel. They much resemble the parent in shape and size, and are of excellent flavor.

The Seed Trade.

AM. SEED TRADE ASSOCIATION.

D. I. BUSHNELL, St. Louis, president; S. E. BRIGGS Toronto, 1st vice-president; A. L. DON, 114 Chambers street, New York, secretary and treasurer.

The Onion Seed Situation.

Our article in the last issue has brought out a number of replies which we give below without comment. While prices are decidedly unsettled we believe that jobbers are not all disposed to maintain the highest quotations named in our last, especially with their own smaller wholesale trade, preferring to sell at even less than they believe to be the market value rather than to lose a general order, thus using the onion for the "sugar" as we have before claimed.

In one sense the onion seed situation has a peculiar look. The delay this season of the California growers in reporting their crops lays them open to criticism. The uncertainty resulting therefrom if judiciously assisted by active inquiry in the East could well be made (and perhaps with the best of results to all) to advance prices. What is the real shortage and what is the stimulant? While the trade are all willing to profit by a good advance they also all desire to know how it comes about.

W. Atlee Burpee & Co. say: "We carried over less than 150 pounds of Red Wethersfield and less than 1,200 pounds of Danvers; our deliveries on contract aggregate exactly 62 per cent of Globe Danvers and not quite 25 per cent of Red Wethersfield. Considering the fact that we had contracted for only our actual requirements, anticipating that we would be able to buy surplus below contract prices, you can readily see that we are caught very short on both these items. We have made personal inquiry from every grower both in California and Connecticut, and not one has been able to supply us with a single pound of either Globe Danvers or Red Wethersfield, everyone refusing to name any price whatever. We have also applied to every reputable dealer of any size in the United States, with the result that we have only had two offers of 500 pounds each of Red Wethersfield, both of which we have purchased, and one offer of 1,000 pounds Red Wethersfield subject to telegraphic reply, but as the price of this last lot was so high we were not then ready to pay the figure named; since then the offer has been withdrawn. Both lots that we bought were at considerably higher prices than we retailed the seed for last year, consequently we find ourselves to-day with less than half our requirements and are disposed, unless further developments should come, to hold the seed at a very stiff price. Hearing that large quantities of seed from American stock had been grown in France we immediately cabled for 30 cwt. Red Wethersfield and 25 cwt. Danvers, with the intention of stating plainly in our catalogue that as it was impossible to get enough of these varieties American grown to "go around" we would now do what we had never done before, offer French grown seed from American stock to help patch out requirements to all those who were willing to risk French grown seed. As this cable order was sent off almost immediately upon receipt of the price list we naturally expected to receive the quantities ordered; what was our surprise then when we received a cable reply that out of the 30 cwt. ordered they could only supply 1 1/2 or a most 2 cwt. of Wethersfield and out of the 25 cwt. ordered only 6 cwt. of the Globe Danvers; so this lot will of course cut no figure. We do believe, however, that other houses who contracted for seed grown in Europe received a little over half a crop on contract, and this may cut some figure in keeping the prices down. However, we do not think that onion seed will be treated in the seed trade this season as "sugar" is in the grocery trade. We have written you the actual facts as they appear to us to-day."

Jerome B. Rice & Co. say: "We believe you have put the onion seed question about right and in a very good light, and think your article a grand, good item on this subject, for it covers the ground very completely."

D. Landreth & Sons say: "We quite agree with the tenor of your article on onion seed. Our information is that crops are short, and we have already had inquiries and orders from unexpected sources for large quantities, indicating a shortage. We think prices ought to advance."

J. M. Thorburn & Co. say: "Your information from California is probably as correct as ours. Regret we are not yet well enough posted to give views on the situation."

L. I. May & Co. say: "We have watched the crops very closely this season, and the outlook is

indeed a critical one. We think, however, that owing to the methods adopted by some houses the trade will be compelled to again sell it at what might almost be termed a loss, so small is the margin.

"The trade in general have used onion as a leverage to secure other orders, and this of course has had a tendency to keep the price down. We were greatly surprised to find that one of our eastern competitors, in his recently published preliminary price list offered Wethersfield and Danvers at \$1 and \$1.10, and we are in a position to state positively that in many instances dealers buying in small lots of not over five pounds have been quoted at figures below those above given, the object being to secure the order by a special low price on onion seed, which is almost certain to be made up on some other article on the same order. This we do not consider legitimate. We believe in basing the price of onion seed the same as on all other seeds, namely, on the cost of production and percentage of yield.

"In regard to catalogue prices on onion seed we would say that, owing to certain eastern competitors, who make a specialty of the mail order business and who will not sell to the trade, the selling price to a certain extent is governed by their actions, and we regret to say that only last year one firm, who makes a specialty of this class of trade, issued a standing offer to deliver to any parts of the United States leading varieties of onion seed in lots of ten pounds, assorted varieties, for \$10, this being lower than regular wholesale prices.

"When such a condition of affairs exists seedsmen who are trying to do a legitimate business and make a uniform profit are compelled to act in this matter against their own wishes.

"Many of the consumers do not stop to consider that it costs a certain per cent to transact business and if a cut is made on one article it is generally made up on something else."

Wm. Meggatt says: "I am just getting out from a very severe sickness, which prevented an earlier reply to your favor of the 16th. I have carefully read your article on onion seed in last week's FLORIST. I think you have pretty nearly hit the nail on the head. There is one fact now about seed which a great many men overlook, and it is this: There are five times times the breadth planted of onion seed both east and in California that there was ten years ago. The breadth has increased much faster than the demand, and even if there is not more than half a crop there will be enough to go round at reasonable prices. Had there been a full crop both east and California in my opinion onion seed would not be worth much. The general claim is that Wethersfield Large Red is very short, but there is less red and more yellow being used every year, and in my opinion there will be enough of that to go round at reasonable prices."
